All of these considerations have had their weight in the deliberations of the Washington legislators on the subject of regulating immigration with a view to its reasonable restriction. A measure having this end in view has just been reported by the Senate Committee on Immigration. This measure adds to the class of aliens excluded from admission to the United States all persons over fourteen years of age who cannot read and write the language of their native country, except that an aged parent or grandparent of an admissible immigrant may accompany or be sent for by such immigrant. The method of testing the ability of the intending immigrant to read and write is as follows:

The inspection officers shall be furnished with copies of the Constitution of the United States, printed on numbered uniform pasteboard slips,

each containing five lines of the Constitution printed in the various languages of the immigrants in double small pica type. These slips are to be kept in boxes made for that purpose and so constructed as to conceal the slips from view, each box to contain slips of but one language, and the immigrant may designate the language in which he prefers the test shall be made. Each immigrant shall be required to draw one of said slips from the box and read, and afterward write out, in full view of the immigration officers, the five lines printed thereon. Each slip shall be returned to the box immediately after the test is finished, and the contents of the box shall be shaken up by an inspection officer before another drawing is made. No immigrant failing to read and write out the slip thus drawn by him shall be admitted, but he shall be returned to the country from which he came at the expense of the steamship or railroad which brought him, as now provided by law.

The inspection officers shall keep in each box at all times a full number of said printed slips, and in the case of each excluded immigrant shall keep a certified memorandum of the number of the slip which the said immigrant failed to read or copy out in writing.

The Committee has submitted a report to accompany the bill, in which it says that there is a general and earnest desire to restrict foreign immigration, but that it believes the country is not yet ready for a capitation tax on immigrants, and is convinced that the consular certification plan is impracticable. It therefore recommends what it regards as the best proposition yet advanced. In the report a mass of statistics is presented which aims to show that the illiteracy test will affect almost entirely those races whose immigration to this country has begun in very recent times, and which are most alien in language and origin to the people who founded the thirteen colonies and have built up the United States; that it will tell most heavily on those classes which now furnish the paupers, diseased and criminals excluded by existing law, and is, therefore, a continuance of the present policy of the United States; that the immigrants who would be excluded by the illiteracy test do not go out into the western and southern states, where immigration is needed, and become an agricultural population, but remain almost entirely in the Atlantic states and in the great centers of population, where the labor market is overcrowded, and that the proposed measure would exclude a larger number of undesirable immigrants and a smaller number of desirable immigrants, so far as statistics can be relied on, than any restriction which could be devised.

AMERICAN INSURANCE COMPANIES IN GERMANY.

While the New York State legislators have been enacting a species of retaliatory legislation to meet alleged discriminations against American insurance companies, the question has also been engaging attention at Washington. In his annual message President Cleveland directed attention to the matter in a passage in which he said that our great insurance companies, having built up a vast business abroad and invested a large share of their gains in foreign countries in compliance with the local laws and regulations then existing, now find themselves within a narrowing circle of onerous and unforeseen conditions, and are confronted by the necessity of retirement from a field thus made unprofitable, if indeed they are not summarily expelled, as some of them have lately been from Prussia. After remarking that international trade cannot be one-sided, the President goes on to say that in our dealings with other nations we ought to be open-handed and scrupulously fair; that this should be our policy as a producing nation, and that it plainly becomes us as a people who love generosity and the moral aspects of national good faith and reciprocal forbearance. These considerations should not, however, he added, constrain us to submit to unfair discrimination nor to silently acquiesce in vexatious hindrances to the enjoyment of our share of the legitimate advantages of proper trade relations. If, he said, an examination of the situation suggests such measures on our part as would involve restrictions similar to those from which we suffer, the way to such a course is easy, but it should, however, by no means be lightly entered upon, since the necessity for the inauguration of such a policy would be regretted by the best sentiment of our people, and because it naturally and logically might lead to consequences of the gravest character.

The House, whose attention had been directed to the subject, lately called upon the President for information in reference to the alleged discriminations, and in response to its request the President this week transmitted to the House the correspondence concerning the matter on file in the State Department. It appears from the papers on file that in April last a New York life insurance company was notified to conform to certain stipulated Prussian methods on pain of the cancellation of its concessions. Acting Secretary Uhl of the State Department sent a cable message to Ambassador Runyon at Berlin stating, on representations from the company, that the company's methods in Germany were unchanged since the concession was given, and that it was impossible to frame a special system for use in Prussia. In a subsequent letter the Acting Secretary declared that, however clear may be the right of each state to determine the conditions on which it will permit foreign corporations to carry on business within its jurisdiction, there prevails in such matters a comity which it is the interest of all nations to maintain, and which is well illustrated in the freedom and equality with which foreign corporations are permitted to extend their operations to the United States. He added that there was ground for the belief that the necessary result of the course lately adopted by the Prussian authorities would be to give to the beneficent principles of comity a restricted and uncertain operation. In spite of this remonstrance the concession to the New York company was declared forfeited last fall, since which time, beyond a protest by Acting Secretary Adee shortly thereafter, and some merely formal correspondence in reference to the mission of Mr. Poultney Bigelow, no correspondence of any consequence appears to have passed between the two governments. In the latest letter submitted, one from the late Ambassador Runyon to Secretary Olney, the fact was disclosed that the officials at Berlin had promised that the matter of the withdrawal of the concession would be again taken under consideration. Since that time, however, the failure of Mr. Bigelow's mission has become a matter of record.

NEW SEALING REGULATIONS REQUIRED.

In the course of a hearing before the House Committee on Ways and Means this week an interesting fact was disclosed, namely, that the State Department is at present in correspondence with the British Foreign Office in reference to the appointment of a joint commission to investigate all the conditions connected with the fur seal industry in Behring sea and to consider and report what further regulations are necessary for the preservation of the seals. It is hoped also to secure the adhesion of Russia and Japan to this proposition, in order to render the work of the proposed commission effective. It may be recalled that a bill embodying provisions authorizing this procedure on the part of the executive was reported by the Ways and Means Committee of the House about a year ago.

The statement as to the pendency of the negotiations was made by Assistant Secretary of the Treasury Hamlin, who appeared before the committee in reference to the Dingley bill, which provides for the creation of a joint commission for the purposes set forth above, and the adoption of a modus vivendi, pending the investigation of the commission, looking to the protection of the animals, and if these efforts prove ineffective, permitting this government to kill seals of both sexes on the Pribylof Islands, the proceeds to be turned into the United States Treasury. The Assistant Secretary, who has made a special investigation of the conditions of seal life, declared that the herds are in danger of extermination as a result of pelagic sealing. The regulations under the Paris award had, Mr. Hamlin said, been fairly satisfactory, but they did not go far enough. The closed season continued only during the months of May, June and July, but in August and September sealing could be resumed again, at a time when all the herds were near the islands. He regarded this as an essential weakness of the regulations. The Dingley bill, he thought, would put great power in the hands of the President and the Secretary of State, and enable them to secure a modification of the regulations. He questioned, however, if it would not be regarded as a violation of the Paris award. Great Britain, he thought, might regard our action as a violation of the treaty, and would not, as a result, respect the close season, as their poachers might follow the animals which were then heavy with young. The regulations had failed in preserving seal life on the high seas, and additional regulations were necessary. It was necessary, therefore, in the interest of humanity, and for our own protection, to kill the seals not on the high seas, but on our own territory. During the hearing before the committee enough has been elicited to warrant the statement that under the existing regulations the extermination of seal life is seriously threatened. The committee has taken this view of the matter, having ordered a favorable report upon the bill, and similar action is looked for in the Senate Committee on Foreign Relations.

BRITISH FOREIGN TRADE AND OUR SHARE IN IT.

Late returns by the British Board of Trade and Navigation for the month of January are the most encouraging as to the condition of business in the United Kingdom made in a number of years. It will be recalled that the signal for the long period of depression was a collapse of the Barings' bank late in 1890, nearly three years before the last great panic in the United States. The question naturally suggests itself whether the January report of the foreign trade of Great Britain, so unexpectedly and gratifyingly favorable, may not be an indication of the return of a prolonged period of relative prosperity in commercial and industrial circles across the water.

Inasmuch as the revival of business in the United States since 1893 has fallen short of expectation, the foregoing also suggests, now that the upward movement has displayed itself in the United Kingdom, that something in the way of a corresponding gain may be looked for here.

As one London newspaper explains it, "only the veriest pessimist" would not be gladdened by the trade and navigation returns for January, the increase of exports for the month amounting to £2,902,000, nearly 16 per cent. as contrasted with January, 1895, and the imports £1,730,000, nearly 4.8 per cent. as compared with the corresponding period one year ago.

Still more significant is the fact that the improvement has extended to nearly every line of industry, the iron trade, which has been so long dormant, leading.

The increase in importations into the United Kingdom of less than 5 per cent. is regarded as indicating there is more spending money and more prosperity generally in that country. January purchases of foreign beef and mutton amounted to £296,000 more this year than last, and other articles of food and drink to £640,000 more. Increased purchases of food also include bacon, fish, fruit and sugar, the January increase of the last item alone amounting to 230,000 cwts. January importations of iron ore were 180,000 tons heavier this year, nearly all from Spain, and receipts of chemicals from abroad were valued at £215,000 more, in addition to which importations of foreign clocks, hats, glass, silks and gloves into the United Kingdom show like gains. But there is an "unfavorable feature" in the report of January importations into the United Kingdom in the reduction of receipts of raw cotton, "the entire burden of which fell on the United States," the falling off in amount being 1,556,000 cwts., and in value £1,735,000. But there were increases in January importations this year of wool, silk and jute, but, notwithstanding 1,600,000 pounds less wool went from Australia to the mother country, the value of such receipts was £160,000 greater.

British trade returns early in 1895 showed that the United States, Japan, Brazil, Chili, Java and the Cape were the only countries "buying more freely" from the United Kingdom than in 1894. The dependence of British foreign trade on commercial relations with the United States is further shown by the fact that while out of a total net increase of £4,817,000 in the last quarter of 1895 £1,200,000 thereof was due to added shipments to the United States, out of a total British increase in value of exportations to all countries in the whole of the calendar year 1895, amounting to £10,345,000, the share of the gain to be credited to the United States was £9,199,000.

The foregoing makes it plain that, in addition to the reaction in trade conditions in the United States in the latter part of 1895, there was an increased purchasing power manifested, so far as their trade with Great Britain is concerned, on the part of other countries, notably the Cape and Natal, Germany, China, Australia, Argentina, Japan and France. On the other hand, British exportations to India in the latter quarter of 1895 showed a marked reaction from the total value of the same in the like quarter of 1894. Now that India's cotton duties are settled, it is expected by British students of the situation that their

exports to British India will soon begin to expand. Among the various important groups of British exports none appears to be making greater headway, so far as may be judged from the January returns, than iron and steel.

The total increase in value of British January exports this year was £2,902,000, distributed over almost every branch of trade. More beer went to the East Indies and the United States, "more spirits to British South Africa and Australia," more coal to France, and more cotton piece goods, jute, linen and wool manufactures to the Argentine Republic, Australasia and British South Africa, which countries, with the Argentina and East Indies, owing to their takings of railroad iron, steel and rolling stock, constitute the feature of the January export report.

It is declared impossible to longer doubt that the United Kingdom has "at last entered upon a period of fresh activity in trade."

UITLANDERS AND BOERS.

While the condition of affairs in the Transvaal has quieted down, it is evident that the underlying causes for the recent revolutionary outbreak at Johannesburg and for the ill-fated filibustering attempt of Dr. Jameson and his comrades are still in actual existence. Recent cable advices, meager as they are, indicate this, but leave us in the dark as to whether the leading men of the South African republic and the Boer population, which constitutes a governing class, are willing to make concessions to the hated intruders. In fact, the indications are the other way. The prejudices of the Dutch have been apparently heightened by the recent events in the republic, while their proverbial stubbornness would only be made more pronounced by their success in the field against the British invaders of their territory and the ease with which the abortive rising at Johannesburg has been suppressed.

The effect of all this upon the gold mining industry of the Rand is a matter of considerable interest. Not only have the operations of the producing mines in the republic been seriously interrupted, but it is likely that a check has been given to further development of the industry. The restoration of order has, it is true, been followed by a resumption of activity by most of the Rand mines. Nevertheless, it is evident that grave difficulties still surround the industry of the place, while the fuller mail advices which now come to hand in regard to the conditions which preceded the rising, throw into relief a number of causes, economic as much as political, which were responsible for the revolutionary action of the Uitlander population, and which account for the fact that the American and German element in the republic sympathized and sided with the British inhabitants in their opposition to the Boer government as at present constituted.

The Johannesburg correspondent of the London *Statist*, writing a month or more ago, presents in a very striking way the condition of affairs which existed on the very eve of Jameson's raid and the outbreak at Johannesburg. The manifesto of the Transvaal National Union, which is given in full and analyzed, constitutes a formidable indictment of the Boer government in its relations to the Uitlanders and the gold mining industry. This notable document concludes as follows: "There is no disguising the fact that the general policy of the government is based upon intense hostility to the English-speaking population, and that there are unmistakable signs that the President fears that the policy he has hitherto adopted will not be sufficient to keep in check the growing population. It seems the set purpose of the government to repress the growth of the industry, to tax it at every turn, to prevent the working classes from settling here. The President opposed the throwing open of the Pretoria town lands, on the ground that 'we might have another Johannesburg here,' and opposed the use of diamond drills for prospecting government lands, because 'there is too much gold here already.' The intention of the government to employ force to restrict and suppress the gold industry is now evident. A fort is to be built at Pretoria at a cost of £250,000, and another at Johannesburg. Orders have been sent to Europe for Krupp guns and Maxims, and the foreign population is to be held in terror." In conclusion the demands of the Uitlander are formulated thus:

1. The establishment of this republic as a true republic.

2. A grondwet or constitution, which shall be framed by competent persons selected by representatives of the whole people and framed on lines laid down by them, a constitution which shall be safeguarded against hasty alteration.

3. An equitable franchise law and fair representation.

4. Equality of the Dutch and English languages.

5. Responsibility to the legislature of the heads of the great departments.

6. Removal of religious disabilities.

7. Independence of the courts of justice, with adequate and secured remuneration of the judges.

8. Liberal and comprehensive education.

9. An efficient civil service, with adequate provision for pay and pension.

10. Free trade in South African products.

The body of the manifesto is devoted to the impeachment of the methods and persons of the government. "The legislature is the supreme power; it is elected by one-third of the people, and is uncontrolled by any fixed constitution. It imposes taxation—(*a*) without representation; (*b*) in excess of what is required for the needs of government; (*c*) so that it is incident on the Uitlanders; (*d*) so that the necessaries of life are unduly burdened. Expenditure is not controlled by any public official independent of the government; vast sums are squandered, and the secret service fund is a dark mystery. The legislature has just affirmed the principle that the executive, and not the courts of law, should have the power of deciding whether persons have been guilty of sedition, and to deport them and to confiscate their goods. Continuing in the same view the manifesto says: The judicial bench, which has been the only defense to the liberties of the Uitlander, has been attacked, and an attempt was made to render it subordinate to the executive; the judges have been underpaid, their salaries made unsecure, and their dignity assailed. The administration of justice by the native commissioners, Boer field-cornets and minor (native) officials is producing the gravest unrest. The right of trial by a jury of his peers is denied to the Uitlander. Only the native Boer, ignorant of the language, ideas and sentiments of civilized life, and inflamed by racial and political animosity, may sit in judgment upon him." Further than this, it states that the question of native labor, a vital point to the prosperity of the gold industry, is also a subject of great complaint.

"The administration of native affairs," it goes on to say, "is a scandal and a danger to the community. Commissioners of natives are allowed to practice extortion, injustice and cruelty, and to goad petty tribes into rebellion. For the wars the Uitlander has had to pay, and the result has been to scatter and destroy the sources of native labor. In cases where brutal field-cornets have been brought to justice the government has paid their fines and defended their action. The Plakkers Wet, a law which allows the field-cornet to prevent the location of more than five natives on one farm, is applied so that Uitlanders who cultivate farms are deprived of native labor when they most require it, the men taken away being distributed among the Boers. Education is neglected; the English community, who pay the greater part of the taxation, receive no grants for their schools." The manifesto then dwells at length upon the malignant influence of the Netherlands Railway, which was built upon the public credit, and saps the mining industry by the outrageous charges and mismanagement of the monopolists. The attitude of the government in its dealings with the mercantile community is forcibly brought out by a recent grain incident. In the recent scarcity the government was petitioned to allow the free importation of foreign grain to prevent starvation of native laborers. This was declined, on the plea that duties could not be suspended without a permission from the Volksraad. A few days later the government granted a concession to one of its friends to import grain free of duty and sell it in competition with the merchants who had to pay the dues. The grant of monopolies—the dynamite monopoly, which costs the public £600,000 a year, the Water Concession, the Railway Concession, the Electric Lighting Concession—at the expense of the public is next dealt with, and it is stated that at least one member of the government, Mr. Wolmarans, has never denied the statement that he was a recipient of 2s. per case from the dynamite monopoly.

All of these abuses may be somewhat exaggerated, but at the same time the facts as stated in the Union's manifesto not only give grounds for the unrest of the non-native portion of the population but explain the gravity of the situation so far as the progress and development of the Transvaal gold fields is concerned.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

For some time past there has been talk of a duty on tea being imposed by Congress. A number of tea importers having this matter in charge appeared before a sub-committee of the Ways and Means Committee of the House at Washington on Monday. On behalf of the importers it was urged that a specific duty be imposed upon importations of tea sufficient to correct certain evils which could not be avoided under present regulations. Statistics, it was urged, showed that in 1873 the average import price of tea was double the price of to-day, and the consumption per capita 1.53 pounds. Since then the average quality and price has steadily declined, and the consumption reduced to 1.34 pounds per capita. To-day the consumer paid the retailer nearly as much per pound for tea as was paid in 1873, but received tea of much inferior quality. Duty, it was contended, was the only real safeguard, and it would retard the importation of poor quality of tea by American merchants. One importer, replying to a question by a member of the Ways and Means Committee, said that a duty of from 10 to 15 cents per pound would be sufficient, that this was the only country in the world which admitted tea free of duty, and as a result we got 90 per cent. of the cheap trash.

CURRENT BUSINESS NEWS.

Industrial.

Over 1,000 workmen, of all trades, employed on the Ellicott Square Building, in Buffalo, N. Y., were ordered out on strike last week, because, as alleged, non-union carpenters and electrical workers were being employed and the walking delegates were denied admittance to the building.

A general strike of the Clothing Cutters' and Trimmers' Union, of Chicago, involving from 12,000 to 15,000 workpeople, is reported imminent. The cutters and trimmers want the manufacturers to keep the agreement made with the union as to hours and wages and shop regulations, while the employers say the are simply resisting the arbitrary edicts of the union, and intend to say hereafter what wages they shall pay and the hours their men shall work.

A Topeka dispatch says that an oil well has been sunk at Neodesha, Kan., which yields 110 barrels a day.

From a recent announcement made with regard to the new photography, it appears the process is likely to supply the solution of a problem which has long engaged the attention of the engineering world—the detection of flaws in metal. It would seem that "when Professor Roentgen's discovery has been brought to a practical issue we shall be furnished with a much more satisfactory means for detecting flaws and other defects in metal than any available hitherto."

A Pittsburgh dispatch says that the officials of the three glass working trades organizations—the American Flint Glass Workers' Association, the Window Glass Workers' Association and the Green Glass League—yesterday completed a system of coöperation for defense, which involves 75,000 workers, and "will make the federation the most powerful trades combination in the United States."

Commercial.

Members of the New York Produce Exchange propose to organize a company to build canal boats able to carry 15,000 bushels. The boats now in service are limited to 8,000 bushels. The new boats are to be used for storage on their arrival at New York, thus saving elevator charges. In this way the grain men hope to defeat the "elevator combination." The directors of the Canal-boat Owners' Association have issued a statement to the effect that the cause of the "alarming decline in grain receipts here by canal is that the New York grain elevator combine is collecting ½ cent a bushel above the maximum charge fixed by law. The Buffalo elevators charge 4 mills per bushel above the legal maximum. These charges figured on a boat-load mean from $72 for wheat to $136 for oats." These charges footed up since the State Elevator law went into effect in 1888 "are $3,833,243 at Buffalo and almost $4,000,000 at New York, according to the statement."

Dangers in the use of compressed acetylene gas have been discussed in a lecture by Professor James M. Crafts, of the Massachusetts Institute of Technology, before the Society of Arts in Boston. Says an exchange: "If stored in a steel cylinder of 600 to 700 pounds pressure, in the event of a fire in the building containing it it would be decomposed into carbon and hydrogen, and the latter would have a pressure of 20,000 pounds per square inch, which would burst the cylinder and cause great damage. A slight leak in the cylinder would be still more dangerous; 3 or 4 per cent. of the gas in the air would cause a mixture of terrible explosive force. Acetylene gas alone can be exploded by fulminate of silver, and the copper salts of the gas are also violently explosive. One danger in keeping gas in tanks in houses would be in the formation of a copper salt near the acetylene tank."

Steel rails on highways, to reduce the resistance to traction, are suggested, "the cost being estimated at $6,000 per mile for a double track on a macadamized road, and $2,000 for a single track on a road built for light traffic."

A Washington dispatch, February 17, says: "Mr. Tracey, of Missouri, introduced in the House to-day a bill to create an Executive Department of Commerce, which shall have under its jurisdiction the Commissioner of Railroads and supercede the Interstate Commerce Commission. It shall contain also the bureaus of American and foreign commerce and commercial information and statistics."

The Philadelphia *Press* says: "The increase in the importations of wool have been very large. For the last calendar year the imports of raw wool were 248,989,217 pounds as compared with 115,800,000 pounds for the calendar year of 1894, four months of which were under the new tariff. The imports in the shape of manufactured wool were valued at $60,319,301 for the last calendar year, as compared with $17,336,164 for the calendar year of 1894. This accounts for the closing or partial closing of so many woolen mills and the unfortunate condition of the wool growers. Of shoddy and waste the imports for the last calendar year amounted to 20,600,000 pounds as compared with 3,200,000 in the previous calendar year, although four months of the calendar year of 1894 were under the new tariff."

The Minneapolis *Market Record* says that there are now 18,597,000 bushels of wheat in the twenty-four larger lines of elevators of three states. In addition the Chicago & Northwestern and the Southern Minnesota Division of the Milwaukee Road elevators are carrying 1,900,000 bushels; in small lines and independent houses on the Minneapolis & St. Louis, the Hastings & Dakota, the Omaha, Great Northern and Northern Pacific roads an additional 10 per cent., making a total of 22,550,000 bushels now in Minnesota and the Dakotas country elevators. If that be added to 27,000,000 bushels of salable surplus in farm granaries, it makes a total of 50,000,000 bushels to be moved. There are in Minneapolis about 21,000,000 bushels and in Duluth and Superior 10,000,000, making practically 80,000,000 bushels of wheat lying now in elevators and on the farm in Minnesota and the Dakotas. Minneapolis will consume nearly 50,000,000 bushels during this crop year, Duluth and Superior together will take about a third as much more, and country mills in the three states will grind 25,000,000 on this crop.

Some notion of the number of bags used in California for the movement of vegetables, sugar, wool, grain and cotton is given by the following paragraph from Thomas' *Produce Report:* "The way things look there will be 7,500,000 to 8,000,000 bags in San Quentin on the first day of June. There are 25,000,000 already on the way from Calcutta, outside of what are coming by steamer and by vessels which will be put on in the future. Then it is estimated that there are about 10,000,000 bags in the state of California to-day outside of San Quentin, for, besides what are in the warehouses in San Francisco, there are a great many in the country, caused by the overestimation of the yield of crops."

Financial.

The following securities were sold at auction this week at New York:

15 Shares Manhattan Company Bank	205⅝
Shares Mechanics' National Bank	201½
11 Shares Phenix National Bank	166½
20 Shares Brooklyn Bank	160
20 Shares National Park Bank	273½
13 Shares Nassau Bank	152
25 Shares Fourth National Bank	182⅜
30 Shares First National Bank of Hoboken	500
10 Shares Fifth Avenue Bank	3,150 @ 3,275
94 Shares Tradesmen's National Bank	90
14 Shares National Bank of the Republic	149¼
55 Shares First National Bank, Jersey City	300
35 Shares Long Island Insurance Company (in liq.)	$101 lot
40 Shares Eagle Fire Company	235¾
8 Shares Manhattan Life Insurance Company	401
6 Shares Long Island Safe Deposit Company	70
$7,000 Atlantic Dock Company 1st mortgage 5 per cent. bonds	100
$2,000 Consolidation Coal Company 6 per cent. convertible bonds	101½
$7,000 Long Island City & Flushing Railroad 1st mortgage 6 per cent. bonds	115⅜
19 Shares Keokuk & Des Moines Railroad Company	3½
126 Shares American Bank Note Company	$42 per share
10 Shares Atlanta & Challotte Air Line Railway Company	102
25 Shares Ohio & Mississippi Railway Company common	6¼
31 Shares Hannibal Bridge Company	104
250 Shares Harlem Railroad Company	299
$5,000 Birmingham Railway & Electric Company 5 per cent. bonds	$3,100 lot
$4,000 Louisiana Western Railroad Company 6 per cent. bonds	107¾
1 Share United Merchants of New York	$5
20 Shares Kensico Cemetery	$65 per share
65 Shares Brighton Beach Improvement Company, Limited	$25 lot
$2,000 Brighton Beach Improvement Company, Limited, 6 per cent.	$20 per bond
30 Shares Deer Hill Company, Limited	$51 lot
$1,000 Deer Hill Company, Limited, 5 per cent. gold bond	35
$1,100 Storm King Club 5 per cent. certificates of indebtedness, January, 1902	$80 lot
$100 Hanover Club, Brooklyn, 1st mortgage 6 per cent. bond	92
$1,000 Eppinger and Russell Company of New York city, 6 per cent. mortgage bond, September, 1904	$100 lot
$6,000 Kinderhook & Hudson Railroad 1st mortgage 6 per cent. bonds	30
$2,000 Newark, New York, Water Works Company 6 per cent. gold bonds	$205 lot
$3,000 Rochester, Minn., Water Works Company 6 per cent. gold bonds	$335 lot
$1,000 Spartanburg, S. C., Water Works Company 6 per cent. gold bonds	$95 lot

The United States Trust Company of New York filed suits in equity against the United States Cordage Company and its receivers in the United States Circuit Court in Cincinnati, on Saturday last. The trust company asks the foreclosure of certain mortgages on cordage plants given by the United States Cordage Company to secure an issue of bonds for $7,500,000.

The Clearing House Association of Philadelphia voted down a motion to make Philadelphia a central reserve city. There were 10 votes for the motion and 23 against it. A report favoring the movement was adopted by the executive committee of the Board of Trade yesterday.

According to advices received at Port Townsend, Wash., from Alaska, by the steamer City of Topeka, "the Bank of Juneau, Alaska, has failed, owing depositors about $15,000. There are no assets."

The stockholders of the Herring-Hall-Marvin Company will hold a special meeting on March 3.

The transfer books of the Delaware & Hudson Canal Company will close February 26 and reopen March 17. The quarterly dividend of 1¾ per cent. is payable March 16.

The National Lead Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, payable March 16.

Railroads.

The Chicago, Burlington & Quincy Railroad Company has declared a quarterly dividend of 1 per cent., payable March 16.

The all-rail east-bound shipments of dead freight from Chicago last week were 70,070 tons, against 80,078 tons the previous week and 49,738 tons the corresponding week of the previous year.

Chancellor McGill has given a decision in Jersey City in the suit of the New Jersey Junction and National Docks Railroad Companies against the Pennsylvania Railroad Company, in which he holds that the latter company has been guilty of contempt in preventing the complainants from constructing a tunnel under the Pennsylvania tracks at Point of Rocks.

It is reported that the officials of the Panama Railroad Company are dissatisfied with the immediate results of the new contract with the Pacific Mail. It is claimed that little through freight is being received from the Pacific Mail, and that business is being diverted to the Southern Pacific Railroad. So far as is known, however, nothing has been done in the matter.

A late dispatch says: "General Manager Charles M. Hays has won a victory for the Grand Trunk by compelling the proprietors of the Port Huron tunnel to cut in half the charge for transferring cars. This was done through threats to go back to the old car-ferry system in operation before the tunnel was built. It is expected that this will take some business from the Vanderbilt roads, particularly Michigan Central, and give it to the Wabash-Grand Trunk route. The largest single item of freight affected will be the dressed beef sent through in the private refrigerator cars of Chicago concerns."

Miscellaneous.

Press dispatches say the Hudson river tunnel "is again under consideration in an attempt to complete it. A syndicate of English and American capitalists is being formed, and Sir W. D. Pearson, representing the English bondholders, is now in this country on this business. Daniel Lord, of Lord, Day & Lord, New York city, represents the American interest. The sum of $1,000,000 is mentioned as needed for the immediate resumption of work, but no estimates are furnished covering the completion of the tunnel and its approaches."

Foreign.

The largest profit realized in Dundee (Scotland) whaling enterprise for the past twenty or thirty years has just been announced as that of the vessel Active. The catch of the Active last season, engaged in the Greenland whale fishing, amounted to nine whales, "expected to yield 4½ tons of bone, besides a number of narwhals, seals, etc. The outfit of the vessel cost about £1,030, and, after paying the owners one-third of the profits and meeting other payments in connection with the trip, there will be a sum of about £4,000 left for division—equal to a dividend to the shareholders of 360 per cent. Last week a large parcel of the bone was sold at the rate of £2,000 per ton."

An Ottawa, Ont., dispatch says: "Finance Minister Foster will ask Parliament to appropriate $3,000,000 for the purpose of increasing the equipment of the militia and strengthening the defenses of Canada. This sum would involve too heavy a tax upon the ordinary revenue, so it is proposed to charge the whole expenditure to capital account. The plan is to purchase 40,000 magazine rifles and heavy field ordnance. None of the money will be expended on fortifications. This was the scheme approved by the British War Office, it being considered sufficient for the Dominion to provide for hasty defense of the most vulnerable points along the line of transportation, in order to repel possible invasion, until such time as aid could be sent out from England."

An Ottawa dispatch says: "The Fishery Protection Service was troubled with many evasions of the law by licensed vessels flying the Stars and Stripes last year. The practice of the licensed vessels was to buy supplies and bait in port, as they were entitled to do, and when outside the three-mile limit to transfer them to unlicensed United States vessels. A clause is to be added to the modus vivendi license making such practices an offense against the Canadian fishery laws and rendering the offender liable to have his vessel confiscated by the Dominion government for a violation of them."

Progress on the Siberian railway during 1895 is reported as follows by United States Consul-General Karel, at St. Petersburg: In the year 918 miles were constructed, making a total of 1,649 miles now completed, or over one-third of the entire line. There is now a direct railway route connecting St. Petersburg with the Yenisei river, a distance of 3,056 miles. Mr. Karel says that there is to be a railway ferry across the 20 miles of Lake Baikal, and that efforts are being made to avoid the northern Vladivostock route by extending the line across Chinese Manchuria. If political events do not interfere, this southern line would be shorter, less expensive in construction, pass through a dense population, and lead to a harbor always unobstructed by ice,

An exchange says the "iron trade all over Europe is in a prosperous condition. In France there has been only a slight increase in production, but the iron works are all busy. In Belgium the volume of trade has increased, and some of the larger works have difficulty in keeping up with orders, especially for rails and structural steel for export. In Germany there is also reported orders enough to keep the works busy. The exports of iron and steel of all kinds from Germany for the eleven months to November 30 were 1,387,311 metric tons, an increase of 68,150 tons, or 5.2 per cent., over 1894, and of 276,083 tons, or 24.8 per cent., over 1893. In Austria-Hungary there was in November and December a remarkable revival in the iron trade, and all the works are full of orders."

The Sultan has given his sanction to a loan of £3,000,000 from the Ottoman Bank.

A letter from an English retail hardware merchant in the London *Ironmonger* tells one of the most important secrets of the success of American tools in England. The American manufacturers keep large stocks in London and fill orders with great promptness. The American price lists give exact information regarding sizes and grades, and promise delivery in three days from London. A Sheffield price list requires prolonged study to comprehend it, and when an order is sent to Sheffield it may not be filled for four weeks or even eight weeks.

At a recent meeting of the Warwickshire Chamber of Agriculture at Warwick (England) to consider the subject of "international gambling in wheat and other agricultural products as a cause of the depreciation of prices," the secretary read a letter from Lord Willoughby de Broke, who said the meeting would not do the slightest good. Every sane man knew that there was only one way to bring back prosperity to agriculture, and that was to increase prices by doing away with that absurd and ridiculous one-sided system of free trade which had ruined the country altogether for so many years. Mr. C. W. Smith, who fully indorsed this letter, said that he found that the gambling in wheat exceeded the gambling on the turf. The chief cause of the depreciation in prices had been the gambling in futures, which had resulted in corners and panics. No fewer than ninety out of every one hundred transactions in futures were gambling transactions, in which there was no intention to buy or to sell.

A writer in the London *Saturday Review* says: "There are in the Transvaal some 40,000 English, 35,000 foreigners of other nationalities, including men from Cape Colony and Natal, and 150,000 Transvaal born." The fact is that "there are 100,000 Uitlanders, of whom 75,000 are men, and 60,000 Boers, of whom 15,000 are men. There were less than 15,000 votes cast at the last election for president. The Uitlander population is increasing rapidly—it is estimated, at the rate of 4,000 a month."

Some substantial distributions for 1895 having been made by South African companies since the close of the year, the *African Review* has brought up to date a table of dividends. "The Rand record for the year was £2,058,418, against £1,466,694 paid to shareholders for 1894; while the total of South African dividends stands at £6,616,236, an increase of £3,061,660, or 86 per cent. The Rand dividends represented 25¾ per cent. of the value of the year's output—a higher proportion than in any previous year. Of course, some part of the total of £6,616,236 was either directly or indirectly a return of capital in cases where dividends had been declared on sales of property, and the £2,762,009 paid by finance, investment, and miscellaneous companies is not the product of industry, though it represents profits on operations which have been the means of fructifying industry."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Married Woman—Credit—Liability.

The Supreme Court of Georgia held, in the recent case of Hightower vs. Walker, that the mere fact that a wife got the benefit of goods bought by her husband on his own credit would not, whether he was solvent or insolvent, make her liable in law to the seller for the price of such goods.

Interest—Usury—Minnesota Law.

The Supreme Court of Minnesota held, in the recent case of Swank vs. Great Northern Railway Company, that under section 2212 of the General Statutes of 1894 an agreement to pay more than at the rate of 7 per cent. per annum for the use of money cannot be enforced unless the agreement is in writing, and that under the same section and section 2214, an agreement to pay more than 10 per cent. per annum for the use of money is usurious and void.

Foreign Corporations—Regulations.

The Supreme Court of Indiana held, in the recent case of Maine Guarantee Company vs. Cox et al., that the Indiana legislature has power to prescribe the conditions upon which a foreign corporation may do any particular kind of business; that a foreign corporation organized to do business of a kind which it can only transact in the state by complying with certain regulations, may, without such compliance, do business of a general character, such as loaning money upon mortgage and collecting the same by suit, and that a foreign building association cannot collect dues, fines, premiums, bonus or other charges pertaining exclusively to such business without proof that it has filed with the auditor of state the statements required by law.

Constitutional Law—Void Ordinance.

The Kentucky Court of Appeals held, in the recent case of McGraw vs. Town of Marion, that a town ordinance requiring all transient persons, other than citizens of the town, to pay a license tax for the privilege of selling goods or merchandise of any kind at auction or retail in the town, is unconstitutional and void, because it discriminates against the residents of other states; that a municipal corporation is answerable for the damage done to any person by its officers in enforcing an unconstitutional ordinance or by-law, and that therefore one who has been imprisoned by a town marshal for his failure to pay a fine imposed under a void ordinance has a right of action against the town therefor.

Note - Surety —Novation.

The Kentucky Court of Appeals held, in the case of Alley vs. Hopkins et al., that an agreement by the payee of a note with the principal to extend the time of payment for a definite period in consideration of the payment of interest by the principal for that period is based on a valuable consideration, and is such a novation as will release a surety on the note, but that mere passive indulgence to the principal will not release the surety, although interest is paid at the end of each year, as the acceptance by the payee of interest for the preceding year does not imply an agreement upon his part not to sue for another year, and does not take from the sureties the right to compel the creditor to sue at any time.

Railroad—Accident—Employee.

The Supreme Court of Georgia held, in the recent case of Lawhorn vs. The Millen & Southern Railway Company, that even if a train employee who by reason of his having full knowledge that the track of the railroad was in a dangerously defective condition and had so remained for a considerable period, could be held to have thereby assumed all risks of injury necessarily incident to riding, while engaged in his work, upon a train when being run in the usual manner and at the usual rate of speed, yet where upon a given occasion he was injured by a derailment of a car upon which he was riding in the due course of his employment, and on the trial of an action against the railroad company for the injury thus sustained, he proved affirmatively that the train at the time of the injury was being run at a dangerous rate of speed around a sharp curve, it was at least incumbent on the defendant to show that such a rate of speed at the point in question did not exceed that at which the train had usually been run at this place.

Mortgage—Non-Resident—Corporation.

The Tennessee Court of Chancery Appeals held, in the recent case of Myers Manufacturing Company vs. Wetzel et al., that a complainant filing a bill against his debtor to attach property on the ground of the debtor's non-residence can join with his debtor as defendant a non-resident corporation that has not complied with chapter 122, acts of 1891, but holds a mortgage upon the debtor's property secured in the course of a business in violation of said statute, with a view to having said mortgage declared void for want of such non-compliance, to the end that the property, when sold under the decree asked for, may not be injured as to its market value by such illegal mortgage remaining outstanding against it, the property in the mortgage and the property attached being the same. The court further held that chapter 122, acts of 1891, requiring a foreign corporation to file a copy of its charter with the Secretary of State and an abstract of the same in each county where it desires to do business, applies to foreign building and loan associations as well as other corporations, notwithstanding chapter 2, acts of 1891, which purports to regulate the business of building and loan associations, and that there is no conflict between the two.

Bill of Lading—Stipulation.

The Supreme Court of Louisiana decided recently the case of Maxwell et al. vs. Southern Pacific Railroad Company, which arose upon an action to recover the value of 110 bales of cotton that were destroyed by fire while in possession of the defendant at its depot, or the vicinity thereof, in New Iberia, the same having been delivered to the defendant for transportation over its road from the parish of Vermillion to the city of New Orleans. The court held that a stipulation in a bill of lading for the transportation of cotton in bales, by steamboat and a railroad as a connecting carrier for hire, that neither shall be responsible for damage which shall be occasioned by fire, does not exonerate either from responsibility for such damage as shall result from fire that is occasioned through the fault or ordinary negligence of the agents, servants or employees of the carrier; that notwithstanding such a stipulation in a contract of affreightment, the carrier is bound to use due care and watchfulness in the protection and safe delivery of the goods of the shipper, and that if the care demanded was not exercised, the case is one of negligence, and a legal liability is made out when failure is shown.

Contract—Factor—Pledge.

The Supreme Court of Louisiana held, in the recent case of Phillips vs. Feliciana Cotton Oil Company, that where creditor and debtor had by written agreement established between themselves the relations of factor and customer, and definitely agreed upon the amount of credit which should be given by the former, and the manner in which the latter should discharge the same by the consignment and proceeds of sale of products, other and subsequent creditors of the common debtors were without right to complain; that if upon ascertaining that the original amount agreed upon was an insufficient basis, and that additional advances of money were necessary to maintain the debtor's business, the original agreement be supplemented, the advances thereunder would be protected by subsequent shipments, and the proceeds thereof could be rightfully and legally imputed and applied thereto.

Usury—Note—Partners.

The Kentucky Court of Appeals held, in the recent case of The Deposit Bank of Owensboro vs. Robertson et al., that where a note upon which usury had been paid had been renewed from time to time, the usury from the beginning would be regarded as embraced in the last renewal, and would, upon defense being made, be deducted, although there might have been a change of obligors, provided some one of the original obligors was still bound. The court further held that where three partners in a single venture executed a note to a bank in order to raise money to carry on the joint enterprise, and after applying to the payment of the note the proceeds of the venture, each one executed to the bank his individual acceptance for his proportion of the balance, in a suit upon one of those acceptances, the other two having been paid, the defendants could not claim a credit for the entire amount of usury paid on the original note, but could claim a credit for only such a proportion of the usury as the acceptance sued on bears to the whole amount for which the three acceptances were executed, if it were true that the parties to the original paper had a settlement with each other, and each by the settlement assumed his part of the loss and executed his acceptance therefor; and that in order to authorize the plaintiff to show that fact no pleading averring a settlement was necessary, as it was competent to show such a settlement under a denial of the amount of usury in the paper.

BUSINESS NOTES.

New York State Savings Banks.

The New York State Banking Department has compiled statistics showing the condition of the savings banks and institutions of the state. The total resources of the savings institutions are $783,078,580; the amount due depositors $691,764,504, and other liabilities $358,755, which leaves a surplus fund of $90,955,321. The amount deposited during the year was $210,207,118, and the amount withdrawn $187,328,190. The number of open accounts is 1,695,787, of which 338,129 were opened during the past year.

Duluth and Superior Lake Traffic.

The *Marine Review*, of Cleveland, says: "The first report ever issued of the combined lake traffic of Duluth and Superior, giving their actual totals, has been sent out from the United States Engineer's Office by Major C. B. Sears, and it makes a surprising roundup of business transacted in 1895. The totals show that 5,466 vessels entered the two ports during 1895, having net registered tonnage of 5,576,804, and bringing in 2,035,465 tons of freight, valued at $27,443,512, and that 5,380 vessels departed with the net registered tonnage of 5,629,678, carrying 4,375,886 tons weight, valued at $68,564,240. These figures are for both ports for the whole season."

The Asiatic Petroleum Market.

The *American Manufacturer* says: "Siam imported in 1894 3,500,000 gallons of petroleum; 1,300,000 gallons of Russian petroleum were imported directly from Batoum and 250,000 gallons from America, the balance from Singapore. America, which alone supplied the Bangkok market until four years ago, cannot compete with Batoum and Langkat any more. The oil wells at Langkat, on the island of Sumatra, produce about 1,000,000 gallons monthly. The oil, which is in quality perfectly equal to the Russian article, has found a ready market, not only in the Dutch East Indies, Singapore and Bangkok, but also in Hong Kong, Cochin China and Burmah.

British and German Trade in Russia.

An interesting report has been prepared by the Dresden Chamber of Commerce from Russian statistics dealing with the rivalry of British and German trade in Russia. After pointing out that in 1894 the value of the goods imported from European countries into Russia exceeded by 92,000,000 roubles the value of the imports for 1893, the report states that 45 per cent. of this increase is due to the extension of German trade, which has succeeded in ousting England from her former position at the head of the list. As lately as 1893 the value of English imports exceeded that of the German imports by 11,000,000 roubles, but in 1894 Germany imported goods into Russia for 14,500,000 roubles more than England. In the same way, the imports into Germany from Russia have increased 11 per cent.

Frozen Canadian Salmon.

The London *Times* of late date announces that "one hundred and forty tons of frozen salmon from Vancouver were sold in London, having come in the steamships of the new Canadian-Australian line to Sydney, and there transferred to other steamers for London, the distance covered being 18,000 miles. Insufficient care seems to have been taken in the transhipment at Sydney, and a certain portion of the fish did not arrive here in a perfectly satisfactory condition. The prices realized ranged from 1d. to 3d. per pound, though the greater part of the fish was believed to be thoroughly sound. On Wednesday some of the fish was resold in Billingsgate market at 4d. per pound. It is believed that when better arrangements are made at Sydney the fish will realize from 3d. to 4d. per pound wholesale, which would leave the exporters a satisfactory profit.

British View of Our Tariff.

The London *Statist* says: "While the proposed increase in the United States tariff is regarded with dismay by our textile manufacturers, it is welcomed by many British engineering and iron and steel works. The higher the tariff the smaller the possibility of United States competition in iron and steel in neutral markets. Yet the industrial classes as opposed to the merchants in the States will no doubt be eager for higher duties. Among the dealers generally the resumption of interference with the tariff is deeply deplored, and the popular opinion may be summed up in the words of a prominent trader, who said, 'If the Congress would only go home and stay there for the next five years, business would have some chance to expand in a perfectly natural manner.' As Yankee merchants, however, are cute enough to make money even out of tariff charges, we must assume that it is not so much the change as the uncertainty of the situation, with its harassing effect on the nerves, to which the New York importers object."

Trend of Prices.

A London financial circular says that "1896 has thus far improved greatly on 1895, and will doubtless continue to do so for a month to come and more, at the least. For the various statistical records for which the world has to thank Mr. Sauerbeck, the *Economist* and others, show that January and February, 1895, had, on average of all the wholesale prices of the chief articles of commerce of the world, the lowest prices on record. And this includes silver, which moved, as usual, along with all other commodities; only the price of gold remained unaltered, as it always does, because it was fixed fifty years since by act of Parliament.

Canadian Dairy Products.

"The Ontario government," says the London, Ont., *Farm and Fireside*, "has established a dairy school at Strathroy, so as to better instruct Canadian dairymen in the art of making good cheese and butter. In the export of cheese Canada leads the world, its output being $20,000,000 worth per year, of which one-half is furnished by Ontario. The export of cheese from the United States has been only about one-half this, and that of Holland only one-fourth that of Canada. The deficiency of Canadian dairymen is in making butter. In this they are far outstripped by dairymen in the United States. Many of the Canadian farmers' wives have not the conveniences and knowledge requisite to making good butter. One of the most important points in making butter to be marketed is to have a uniform product. This the Strathroy school will promote. It will be under charge of Professor James Mills, the president of the Ontario Agricultural College at Guelph."

A London Bank's Operations.

The London *Daily Financial News* says: "Some remarkable statistics were given recently by Mr. W. E. Hubbard, at the annual meeting of the London and County Bank. He stated that the checks issued during the year amounted to 14,000,000, and, if put together, they would reach 2,000 miles in length and cover seventy acres of ground. In coin the bank's staff had taken in and paid out about £34,000,000 in the twelve months, out of which only £11 15s. 2d. was short, while, on the other hand, £4 10s. too much was taken, so that the total discrepancy came to £7 5s. 2d., or an average of about £1 in every £5,000,000. The bank has 126,452 accounts open and 20,000 deposit accounts, with liabilities to customers of £38,200,000, against which the chairman said there were liquid assets of 77 per cent. to 78 per cent., and the value of the securities at to-day's prices is £985,000 more than the amount at which they stand in the balance sheet."

German Southwest Africa.

The official *Colonialblatt* states that in August of last year a band of English Bechuanas, abundantly provided with arms and ammunition, crossed the frontier between German Southwest Africa and British Bechuanaland near Olifantskloff, with the evident intention of trading in prohibited articles with the Hereros. This intention was, indeed, finally frustrated by the interference of the authorities, but they were compelled to make an armed demonstration against the Herero chieftain, who at first proved refractory. By the help of the latter and his followers, the Bechuanas were all made prisoners and their property was seized. The authorities in German Southwest Africa have been instructed to confiscate all the arms and ammunition, to convey the ringleaders of the Bechuanas to Windhoek for punishment, and to lay under distraint as many cattle as may be deemed necessary for the payment of the prospective penalty.

New York Mining Exchange.

The delegation of western mining men, for whose coming the opening of the new mining exchange at New York city was twice postponed, arrived February 19. To the train was attached a special car containing a bullion exhibit. The delegation was met by the president of the exchange, I. B. Porter; R. A. Ammon, chairman of the committee in charge of the opening exercises of the exchange, and several others. The informal opening of the new exchange took place before a crowd that packed the board room. Most of the members were present. After prayer by the Rev. Robert S. Martin, Isham B. Porter, the president of the new exchange, explained the circumstances under which the exchange was founded. Other addresses were to follow by A. W. Rucker, of Denver; J. W. Dean, Aspen, Col.; E. P. Colborn, Salt Lake City, and H. A. Mott.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

While no radical improvement has appeared in the general trade situation, more favorable influences are reported than for some weeks.

Among the less satisfactory advices telegraphed BRADSTREET'S are the check to distribution of general merchandise, due to the extreme cold, and continued conservative purchases by interior merchants west and southwest, owing to large stocks of merchandise having been carried over. The drop in the temperature has affected the movement of dry goods, hats and groceries most. Advices from Texas are that country merchants are asking extensions, and reports from leading cities south are that the recent relatively favorable state of trade is marked by less active demand in almost all lines. No improvement is shown in demand for cotton and woolen goods, manufacturers of each continuing to find cause for complaint.

The record of declining quotations begun last week is continued for some varieties of cottons, owing to reaction in the price of cotton, in the tendency of quotations of wool to decline, and lower prices of wheat flour, wheat, corn, oats, pork, lard and petroleum. Iron and steel, in moderate demand, are steady, with request for rails relatively most encouraging, and there is no change in quotations for lumber or for coal. The conspicuous advances are on coffee and sugar, although leather is firm after the advance for hides a week ago.

No more satisfactory view of trade conditions in this and the preceding week is reported than the bank clearings total for six business days ending February 20—$1,093,000,000—an increase of 17 per cent. over the total last week, and of 31 per cent. over the total for the third week of February, 1895. The increase in volume of clearings this week as compared with the corresponding week in 1894, a period of extreme depression, is nearly 60 per cent., but as compared with the like week in 1893 the week's aggregate shows a falling off of 10 per cent. Even more significant is the fact that the current week's clearings are only 2 per cent. smaller than in the like period of 1892, 7 per cent. less than in 1891, and 8 per cent. less than in 1890.

Among the industries, boots and shoes and manufacturers of leather are easily conspicuous for reporting relatively the most active demand, and Pittsburgh and Baltimore jobbers of general merchandise continue previous reports of a satisfactory spring business. Chicago jobbers, while advising that sales of dry goods, millinery and shoes thus far are in excess of corresponding totals last year, say that there is a more conservative demand and less snap to business than anticipated. Throughout Iowa there has been a distinct improvement in the business outlook, reflected in larger volume of sales at Omaha. Almost all the larger financial centers report money easier, and Texas advices are that the weather permits plowing and planting. At Tacoma the features are continued, large exports of lime and cement to Central America, and flour, wheat and lumber to South Africa, while from San Francisco nearly 37,000 barrels of flour have gone to Australia. Hardly less favorable than the improvement in bank clearings is the sudden drop in the total number of business failures throughout the country, that for the week being 276, against 381 last week, 327 in the corresponding week one year ago, 235 in the week two years ago, and 202 in the third week of February, 1893.

The year 1895 proved more favorable to the railroad interests of the United States than was promised at the beginning. Improved general trade, which became manifest early in 1895, was reflected in railway earnings as the year advanced. Total earnings of 134 companies, nearly 80 per cent. of the total gross railway earning capacity of the country, aggregated $904,000,000 in 1895, an increase over 1894 of 6.3 per cent., while net earnings aggregated $286,000,000, an increase of 9.5 per cent., a better proportionate outturn of net than gross. Compared with 1893, however, earnings of the identical companies show a falling off for 1895 of 5.5 per cent. gross and 3.3 per cent. net. Compared with 1894, central western, trunk lines and eastern and central western roads show heaviest gains. The smallest increase in gross is shown by the southern roads. In net, heaviest increases are shown by central western, granger and Pacific groups, the smallest increase being that of the eastern and central western roads. Perhaps the best example of the progressive character of the increasing earnings may be gathered from the fact that gross earnings at the end of the first quarter of 1895 were only 1.6 per cent. in excess of the like total for 1894; by the end of the first half of 1895 the increase had become 3.6 per cent.; at the end of the third quarter the increase was 5.3 per cent., and the increase for the entire year was 6.3 per cent. The same movement held good in net, even to a greater extent.

Stock speculation at New York is dull, but exceedingly strong in tone. Absence of public interest or professional initiative is supplied by buying for London account, both of speculative stocks and investment securities. Stocks with an international market have been the strongest, but increasing interest is shown in low-priced or bankrupt shares. The new government 4s declined to 115⅞, but ralled sharply to 118 on the belief that no further bond issues are likely to be required. The general bond market has been active, with dealings at advancing prices in unusually large numbers of issues. Foreign exchange is dull and depressed at 4.87½@4.87¾ for demand bills.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 3,149,000 bushels, against 2,718,000 bushels last week, 1,808,000 bushels in the week a year ago, 1,730,000 bushels in the week two years ago, 2,596,000 bushels in the corresponding week of 1893, and as compared with 3,307,000 bushels in the like week of 1892.

Trade advices from the Dominion of Canada are rather more favorable, Montreal reporting the volume of dry goods distributed about equal to the corresponding total a year ago, with the total in some lines heavier than last week. There are fewer failures also reported from the Dominion, 58, against 70 a week ago, 38 in the corresponding week a year ago, 53 two years ago, and 36 in the like week in 1893. In the province of Ontario snow on the country roads restricts interior trade, while snow in New Brunswick stimulates lumbering. In Nova Scotia the movement of merchandise is not large, but remittances are fair. Communication with Prince Edward Island has been interrupted by storms. Total bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $18,592,000 this week, nearly 5 per cent. more than a week ago, about 12 per cent. more than in the like week last year, 20 per cent. more than in the corresponding week of 1894, and a trifle smaller than in the like period of 1893.

FINANCIAL.

The Money Market.

The New York loan market has been undisturbed and rather quiet in the face of the heavy payments for bonds. Call money on the Stock Exchange has ranged from 3 to 5 per cent., the bulk of the week's business being at 3½@4 per cent. A somewhat better demand is shown for time money, and offerings have also been freer. Some activity has been shown in loans upon the new government 4s. Rates are 4@6 per cent. for all dates. Mercantile paper is dull, with a small supply of first-class names and an inactive buying demand. Rates are quoted 6 per cent. for double names.

The New York Banks.

The changes in the bank averages shown by the statement issued from the Clearing House last Saturday defy analysis. Of course they represent the effects of payments for the new government 4 per cent. bonds. The enormous volume and complexity of the transactions in this connection are obvious, and it is to be expected that this week's changes will be equally confusing. At the same time the figures of last Saturday are, on the whole, reassuring, and correspond with the easy conditions and lack of disturbance in the money market.

The features of last week's statement were the increase of $3,311,300 in loans, which is supposed to represent mainly borrowings on new 4 per cent. governments. The decrease of $7,000,000 in specie requires no comment, and the increase of $3,844,000 in legal tenders seems to represent payments on bond subscriptions made through the special deposit banks. The deposits increase $261,000, and the surplus reserve is decreased $3,363,000. The figures compare as follows with those of the preceding week:

	Feb. 15.	Feb. 8.	Changes.
Loans	$451,743,100	$448,431,800	Inc. $3,311,300
Specie	70,358,400	77,500,900	Dec. 7,142,500
Legal tenders	89,718,700	85,874,500	Inc. 3,841,200
Deposits	493,032,900	492,771,900	Inc. 261,000
Circulation	13,266,400	13,445,800	Dec. 239,400
Total reserve	160,077,100	163,375,400	Dec. 3,298,300
Reserve required	123,258,225	123,192,975	Inc. 65,250
Surplus reserve	36,818,875	40,182,425	Dec. 3,363,550

At the corresponding period last year the surplus reserve was $33,513,125.

Owing to the holiday on Saturday, the bank statement for this week was issued at noon on Friday, February 21, covering the results of five days. The figures for the leading items and the changes from those of last week were:

	Feb. 21, 1896.	Changes.
Loans	$457,795,800	Inc. $6,052,700
Specie	63,920,900	Dec. 6,437,500
Legal tenders	87,130,100	Dec. 2,579,400
Deposits	489,[illegible]00	Dec. 6,437,500
Total reserve	151,060,200	Dec. 8,991,900
Reserve required	122,433,150	Dec. 800,075
Surplus reserve	28,627,050	Dec. 8,191,825

The Boston Banks.

	Feb. 17, '96.	Feb. 10, '96.	Changes.
Loans	$159,058000	$159,810,000	Inc. $148,000
Circulation	9,096,000	8,992,000	Inc. 104,000
Deposits	95,632,000	97,247,000	Dec. 1,615,000
Due from reserve agts	16,519,000	16,326,000	Inc. 193,000
Legal tenders	4,766,000	4,840,000	Dec. 74,000
Specie	9,926,000	11,356,000	Dec. 1,430,000

Foreign Exchange.

Dullness and depression have been the features in this department during the week. Inquiry is on a very limited scale, and the opinion in banking circles is that debit balances abroad have been more generally liquidated than in a long time. The supply of commercial bills is small, but is supplemented by freer offerings of drafts against foreign purchases of bonds and stocks, which has assumed renewed importance in reference to the market. It would seem that some large sterling loans made in connection with subscriptions to the government bond issue are maturing, and tend to support the exchange market. Otherwise, it is thought, there would, under present conditions, be a further decline in rates.

Posted quotations have been unchanged at 4.87@4.88½. Demand sterling was dull at 4.87½ @4.87¾.

The Bank of England rate remains at 2 per cent., having been at this figure, without variation, since February, 1894, a period of two full years. This is unprecedented in the history of the London money market. The bank this week gained £687,000 specie, and its reserve is 63.27 per cent. of liabilities, against 63.40 per cent. last week. At this time the total bullion holdings are £48,797,000, and the reserve £40,745,000, against £29,673,000 at the same period in 1895. In the London open market call loans are ½ per cent. and discount 1⅛@1½ per cent.

The Chief of the Bureau of Statistics, Treasury Department, reports the imports and exports of the United States for the month and seven months ending January, 1895 and 1896 (preliminary figures for 1896, corrected to February 15, 1896), as follows:

January. MERCHANDISE.	1895.	1896.
Exports—		
Domestic	$80,330,490	$85,742,698

The following table shows the value of imports (save specie) at the port of New York for the week ending February 14, 1896:

	1896.	1895.
Dry goods	$3,356,088	$2,074,652
General merchandise	4,405,980	4,218,371
Totals for the week	$7,762,068	$6,293,023
Previously reported	64,402,325	60,143,525
Since January 1	$72,164,393	$66,436,548

The exports (exclusive of specie) from New York to foreign ports for the week ending February 18 were $3,693,425 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$4,433,817	$5,472,475
Previously reported	49,116,093	43,218,052
Since January 1	$53,549,910	$48,690,527

Silver.

The silver market was firm but dull, and late in the week advanced fractionally on the reports current in London that the English government had been approached by Germany in regard to furthering an international monetary agreement, with the reopening of the Indian mints to free silver coinage as a preliminary step. The part of this report relating to Germany has been denied in toto by Mr. Balfour, the English Chancellor of the Exchequer, who added, however, that "we should willingly consider, in conjuncture with the Indian government, the reopening of the Indian mints if the measure comprised a satisfactory scheme of currency reform."

THE STOCK MARKETS.

The New York Stock Market.

Dullness, accompanied by a very strong undertone, has marked the week's speculation. Prices have, however, advanced in some cases with considerable steadiness. The bullish impulse in this case comes from London, which market seems to have completely revised its former adverse opinions in regard to American securities. This improvement is based upon the phenomenal success of the bond issue here, the restoration of the Treasury reserve, and the decisive vote of the House of Representatives against free silver coinage. The latter fact is regarded with great satisfaction abroad, where the fear in connection with American finances has been that the country would be forced to go on a silver currency basis. The encouragement given by the British Cabinet to the idea that a pacific settlement of the Venezuela boundry dispute is not far off has also had a considerable effect on speculative sentiment in London, and though the French political crisis produced a slight chilling of the foreign markets, it could not wholly check the assertion of the more favorable feelings which prevail in regard to our country's position. It would seem, however, that the foreign buying, which toward the end of the week assumed larger proportions, does not represent active participation by the British public in the speculation in "Americans." The warnings which the financial press there have been giving against our securities for months past have not lost their effect yet. But professional interests have apparently taken a different view, and act as if they anticipated a revival of strength and activity in "Yankee rails," their purchases, which foot up a good many thousand shares, extending not only to the leading international securities, but to the low-priced portion of the share list. The continued weakness of exchange here is partly due to this fact. Indeed, authorities on the international markets base their bullish inclinations with reference to the general market in a belief that foreign buying of securities on a large scale is to be expected, and that this will keep exchange rates down and prevent depletion of the Treasury gold reserve through specie exports to Europe.

The fact that the stock market here has not responded with more alacrity to the impulse communicated by London has been the subject of some discussion. It would seem, however, that our own public has not fully recovered from the disorganizing financial effects of the stress to which the Treasury was exposed, and that large interests are unwilling to take active steps in the market while the settlement for the bond subscription occupies the resources of the banks. The rapidity with which the latter process has been effected has, indeed, been a surprise, and the prompt restoration of the Treasury gold reserve to the $100,000,000 mark is a bull factor of importance in the situation. The holiday on Saturday also had some effect in deterring active speculation, while at this season, as is usually the case, many prominent operators are absent from New York.

The bond market came into increased prominence. At the end of the week the quotation for the new government 4s became weak on the news that some of the successful bidders had defaulted, and the quotation for the bonds fell to 115⅞. The news, however, that the allotment in these instances had been awarded to the Morgan syndicate on the ground that its bid was the only one for any part of the issue, was followed almost immediately by renewed activity and strength in the bonds, the price on Wednesday touching 118⅛. Around these figures there was considerable trading, and a bullish feeling was asserted, based on the idea that the administration desires to avoid another bond issue, while the decline in exchange and the prospective foreign buying of our stocks will prevent further drains on our replenished Treasury gold reserve. In the later part of the week the railroad bond list was the object of considerable activity at advancing prices. An unusually large number of different classes of bonds have been traded in, and it is said that London investment orders have been a feature in this department.

The features of the share list have been St. Paul and Louisville & Nashville, both of which owe their advances to London buying. The same influence was also potent in connection with Union Pacific, Erie, common and preferred, and Atchison. Union Pacific's strength was also due to the increase in net earnings shown by the company's statement for the year 1895. The coal stocks were not particularly active, the proposed investigations and legislative opposition to the coal combination offsetting the effects of seasonable winter weather in the coal trade. The leading granger stocks were sympathetically affected by the rise in St. Paul. Burlington's quarterly dividend was declared at the usual rate of 1 per cent. but had no particular influence. Missouri Pacific was a weak feature on continued selling pressure and indefinite rumors.

In the industrial list the activity was less marked Sugar was manipulated with decreased vigor, and the reports of an extra dividend seemed to find less credence. The stock eased off, but there seemed to be buying in it at concessions. The annual report of the National Lead Company had no particular effect on the stock. North American displayed nominal activity and advanced on reports that a sale of some of its assets and a reduction of the company's floating debt was in prospect. There was good buying of Chicago Gas on the fact that the legal questions involving the right to consolidate the companies will be carried into the courts.

Boston Stock Market.

[Special to BRADSTREET'S.]

The movement has been rather more quiet. General values hold up well. Atchison closes ½ point lower, with Chicago, Burlington & Quincy and Mexican at the same prices as last week. Boston & Montana closes 1⅜ points higher, with fair trading. Butte & Boston sold down, but closed with fair recovery. Sugar has been active, and prices have advanced 3⅜ points during the week Bay State Gas closes steady, with Leather slightly lower at the close, preferred showing a decline of 1⅜ points for the week.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE QUIET.

RELATIVELY GREATEST ACTIVITY IN IRON AND STEEL, BOOTS AND SHOES, HARDWARE, DRY GOODS AND GROCERIES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, February 21.—The money market shows a rather easier tone at the close and rates have declined a trifle. The money market has kept up too high to encourage general trading in merchandise, and this has made general business quiet. At the close the best factory paper is quoted at 5@5½ per cent. for four to six months, while business paper is moving more freely at 5½@6½ per cent. A few banks are asking 7 per cent. for call loans, with the range down to 6 per cent. and the demand limited. The boot and shoe trade is showing increased volume and prices have been forced down, the values ruling being about 5@10 per cent. above the 94. low point on men's heavy goods, and 2½@5 per cent. above on women's. Leather has met with a generally better sale, manufacturers being disposed to cover orders for footwear by purchasing the material to make the goods up. Hides are yet quiet and the market is firmer. Iron and steel are quiet and the tone weaker, with lumber in quiet demand and steady. The coal trade is yet quiet at first hands.

Philadelphia, February 21.—Wool continues quiet and without change; manufacturers are not buying freely. There is a fair volume of trade in dry goods, but market lacks snap and collections are poor. Boot and shoe jobbers are receiving large out-of-town orders, and express themselves satisfied with the outlook for spring. There is an improvement in collections. Leather and morocco continue quiet, and the disposition seems to be to purchase only the medium and cheaper grades of skins. The cold snap has caused decreased sales in lumber, paints and glass. Sugar has a downward tendency in some grades. Coffee has the opposite tendency, and buyers are simply supplying immediate wants. There is a fair demand for produce and provisions, but collections are dull and trade irregular. The new combination of coal mining companies has restricted output and prices are firm; trade fair. Iron continues low, but the market is firm and indications point to an improvement.

Pittsburgh, February 21.—There is but little change in general trade since last week. Dealers generally report a fair demand in all lines, and country buyers are more numerous than they have been for some time, while traveling salesmen are reported sending in satisfactory orders. Country collections are slow, but aside from this business is quite satisfactory. Iron remains very quiet, with prices unchanged. Very few sales are reported, and dealers generally do not look for an improvement for some time to come.

Buffalo, February 21—There are no indications of improvement in general trade. Goods are moving slowly.

Baltimore, February 21.—Leading houses in the various branches of trade report orders coming in from their salesmen in a satisfactory manner. The spring business for 1896 is ahead, so far, of that in several years past. Collections, while fair, have not been as good as the two preceding weeks of this month.

West and Northwest.

Cleveland, February 21.—The excessively cold

weather throughout the week has been against activity in any merchandise line. Otherwise, the general trade situation is without material change. Collections are not satisfactory.

Detroit, February 21.—Business in general lines continues quiet, orders being mostly of a sorting-up character. Collections are still slow and unsatisfactory.

Chicago, February 21.—There has been no improvement in the general jobbing trade this week, but there is a fair volume, and sales of dry goods, millinery and shoes are ahead of last year. The leading clothing manufacturers, in trying to run their business, have become involved in a strike and 600 cutters have gone out, so that 5,000 others have also been forced to stop work. This has not affected the clothing trade, as it is between the seasons, the spring goods being ready for delivery, and it is hardly time to start on the fall work. The large sales of hides at advanced prices last week has stimulated buying of leather by the big consumers, and heavy sales have been closed, one lot of kips valued at $40,000 being closed to-day at full prices, and in some instances better figures are secured. Bar iron and light hardware are without new features. Pig iron shows considerable life, and good sales of coke and charcoal irons have been closed at full prices. Orders for steel rails are coming in well, and where the manufacturers had 20,000 tons booked last year, they have 100,000 tons now. Steel rods are held with more confidence and there is a good demand, but billets are selling slowly. Eggs are lower, butter higher, and the general produce trade quiet. Wool receipts, 14,141 pounds.

Louisville, February 21.—A fair business continues with prominent houses in staple merchandise, but otherwise trade is quiet. Collections are only moderate.

St. Louis, February 21.—Mercantile lines continue to show a gradual betterment, and while buyers are here in fair numbers ordering such staples as dry goods, boots and shoes, groceries and hardware in reasonable amounts, there is a decided tendency toward conservatism, as a majority still have considerable stock for winter use, the result of the mild weather. Manufacturers of boots and shoes are taking leather in increased quantities, but for the sole purpose of making up stock for immediate shipment, as they will not anticipate, although concessions are offered. Hides steadier, with light stocks. Pig iron is moving in small lots at unsteady values. Lumber receipts are light. Demand fair and prices steady. Values unchanged on finished iron and steel, with a fair seasonable demand, and the railroads buying more in rails and equipment.

Kansas City, February 21.—Trade in all lines, both wholesale and retail, is quiet. Collections are fairly good. Live stock receipts are liberal, with dull market and low values.

Milwaukee February 21.—Improvement in the volume of trade is very light, the general situation remaining unchanged. Collections are fair.

Des Moines, February 21.—Business light. Collections are fair. General business outlook is good for Iowa.

St. Paul, February 21.—The cold wave has had an unfavorable effect on some lines, viz., dry goods, and hats and caps. Groceries continue dull, while boots and shoes and leather houses report trade quite active. Collections are coming in slowly, but about up to that usual this time of year.

Minneapolis, February 21.—There are no new features in the trade situation. Business in general is fair.

Duluth, February 21.—The situation is unchanged in jobbing circles and collections. Our trade is steady, with some sales reported for export. Lumber is unchanged. Activity of cash wheat has been the feature of the week's trading. Money is in good demand.

Omaha, February 21.—There is a slight improvement in the local jobbing trade, but collections are not quite up to expectations.

Southern Cities.

Charleston, February 21.—The grocery trade still continues dull. Wholesale jobbers in dry goods, boots and shoes report orders only a fair trade. Collections are rather slow.

Savannah, February 21.—Jobbers and retailers report very fair trade for the week, with average collections. Rosin shipments are slightly heavier than last week, but receipts of both and shipments of spirits show a decline. Spirits market steady. Rosin firm.

Atlanta, February 21.—Jobbers in hardware and shoes report a small falling off in sales. Otherwise no change since last week. Collections are fair.

Augusta, February 21.—Between-seasons dullness characterizes general trade. Jobbers of groceries and provisions report a considerable falling off in sales compared with January. Collections are not satisfactory.

Jacksonville, February 21.—There is a slight gain in city sales over preceding week. Otherwise no change.

Chattanooga, February 21.—Manufacturers of boilers and woodenware seem to be busy and doing better than a year ago. Otherwise no change since last week.

Birmingham, February 21.—General business and collections are only fair.

Memphis, February 21.—General trade is unchanged. Country collections are fair.

Nashville, February 21.—Output of goods to the country continues in liberal volume. Collections fair. City retail trade is dull; collections poor. There is more money in sight than last week.

New Orleans, February 21.—Jobbing lines are slack, owing to carnival festivities, although retailers have been active. Sugar, rice and cotton are dull. Money market is steady, with tendency toward easier tone. Demand moderate, with funds ample.

Galveston, February 21.—Jobbers in groceries, hardware and farming implements report a good business; other lines in only moderate demand. The weather is excellent for plowing and planting, and the outlook is hopeful. Collections remain unsatisfactory, and in many instances interior merchants are asking for fall extensions.

Pacific Coast.

San Francisco, February 21.—Commercial lines are steady and slightly improved in volume. Refined sugars advanced ⅛c. Produce markets are quiet. Grain is a shade lower. Freights, £1 1s. direct. Thirty-four thousand six hundred and fifty barrels of flour went to Newcastle and Sydney yesterday. Collections, though slightly improved, are still slow.

Portland, February 21.—There are indications of a movement among local jobbers to try and regain the Alaska trade, which has lately been controlled by Seattle and Tacoma merchants. The pleasant weather has helped retail trade, and jobbers continue to do business on conservative lines. The drug business continues in a demoralized condition, owing to cut prices. Collections are fair.

Tacoma, February 21.—Alaskan freight and passenger traffic is active, and one new vessel has been added to the regular line. Central American trade is growing, large orders being filled for lime and cement. African orders for flour, wheat and lumber continue large. Several heavy shipments of flour have been made to San Francisco for export from there.

Seattle, February 21.—Another steamer has been added to Alaska line, and shipments have been heavy in groceries, hardware and lumber this week. General trade also shows some improvement. There is a slight increase in the price of milling wheat. Export wheat unchanged.

Canada.

Toronto, February 21.—Wholesale trade is quiet. Country roads are blocked with snow, and retailers are doing little in consequence. Grain markets flat, with wheat weak.

Montreal, February 21.—Dry goods jobbers report sales satisfactory and fully as good as last year. Collections are moderately good. Groceries and hardware are moderately active. In nearly all lines a little improvement is apparent, but considerably more is necessary to restore trade to normal conditions. The failure list is not so heavy this week, and prospects a little better than two weeks ago. Money on call at 5 per cent.; tendency firm. Quebec city reports trade dull and collections hardly satisfactory.

Halifax, February 21.—Seasonable weather continues, and remittances from the country are fairly good. The movement in general merchandise, however, is very light, and the market for fish is unusually dull. There is plenty of snow in New Brunswick, and the lumbermen are taking advantage of the opportunity and pushing matters. Mail communications with Prince Edward Island have been considerably interrupted this week by storms and difficult crossing.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM FEBRUARY 8, 1896, TO FEBRUARY 14, 1896, INCLUSIVE.

Dry Goods.

[Special to BRADSTREET'S.]

Trade continues quiet in the general market, although a fair trade is noted in some lines. Cottons have been reduced in price by some of the leading mills in order to attract business, but buyers are operating conservatively. Raw cotton has shown an easier tone, but is above a parity with goods. Supplies of made-up cottons are large, and it looks as though some of this surplus would have to be disposed of at low prices in order to start the market. Printed goods are quoted ¼c. to ½c. lower on some makes of common fancies, the call being largely for a better grade of goods, which is covered by specialties. Ginghams are dull. Dress woolens are quiet at first hands, with the jobbing movement steady in some lines of foreign goods, mohair effects being yet very good. Men's-wear woolens are quiet, with agents picking up moderate orders from time to time.

Wool.

[Special to BRADSTREET'S.]

There has been a very dull tone noticeable in the market, with sales the smallest for many months. Values are not materially lower, general asking figures being about the same. Any attempt to force sales at present would have to be at concessions, but dealers show no disposition to follow such a course. They feel that domestic wool yet has good value, and are not disposed to entertain bids, except at fair market rates. Manufacturers, as a rule, are well supplied to meet their present needs, and are not disposed to buy ahead. When goods sell better they will want wool, which will then show the strength of the market. Australian wools maintain a firm tone, and sales making are at full values. Arrivals have been large the past week, a large part of the recent London purchases having come forward. An auction sale of low wools in London this week showed firm values, with a fraction advance on some kinds.

Cotton.

Exports of raw cotton during January and the five months ending January 31, 1896, with comparisons for last year:

JANUARY.

	Bales.	Pounds.	Values.
1896	576,400	289,914,201	$23,380,453

THE OUTLOOK FOR LARD.

The *Oil, Paint and Drug Reporter* says: "Current statistics of the stocks of lard and compound in Europe, and afloat for European ports, and of pure lard in American markets, show a considerable excess over any year since 1891, the visible supply on February 1 for a series of years having been as follows:

	Europe and afloat, tierces.	United States, tierces.	Total visible, tierces.
18[illegible]	114,000	80,100	194,100
1891	268,000	207,700	475,700
1892	193,000	135,500	328,500
1893	88,500	17,000	105,500
1894	86,000	27,700	113,700
1895	128,500	69,900	193,400
1896	232,000	120,900	352,900

"The range of prices on cash lard at Chicago on the same dates was as follows:

18[illegible]	5.70
18[illegible]	6.10
1892	6.42
1893	12.05
1894	7.50 @ 7.25
1895	6.37½ @ 6.40
1896	5.07 @ 5.75

"The value of these figures as an element in forecasting the course of the lard market is only relative, there being so many other elements to be considered as affecting the consumption of this supply, and the additions to it which will be furnished by the production of lard and its compounds during the remainder of the current crop year. The most cursory estimate of the consumption of this product must take into account not only the increased competition of other fats, but also the extent to which consumption is rapidly increased or diminished by the conditions which permit more liberal living, or compel closer economy in the households of the masses here and abroad. In European countries, where the economies are more rigorously enforced by all classes than they are among our people, but a small saving is necessary among that proportion of the population which may be said to be dependent upon American lard, to effect an aggregate diminishing of consumption more than equal to our export output in any single year. This sort of reasoning is apparently altogether hypothetical, but experience has shown that it is entirely real, and the present stock of lard in Europe is largely attributed to just these causes. Industrial conditions throughout Europe have been such as to compel economical living on the part of the masses for the past two or three years, and the effect would be discernible in their consumption of all articles in which saving is easily possible. But beyond this is the competition of butter, which has been so low in price for more than a year past as to curtail the consumption of the coarser fats by the classes who could afford to indulge a preference at the abnormally low cost of the better product. The enormous receipts and low price of Australian butter in the European markets and the increased crop of the dairy product throughout northern Europe have been adverse to the consumption of American lard or compound. So, too, the cheapness of butter in our own country had its effect upon the use of lard, and, although it is perhaps less perceptible in the statistics of pure lard, it would be quite apparent in figures which included the compound, the latter having borne a much smaller relation to the entire consumption during the past year than in several of its predecessors.

"It is evident, therefore, that in calculating the chances of a rise or decline in the price of lard during the current year one must take into account a number of conditions not covered by any available statistics. That there is a prospect of bettered industrial conditions here and abroad seems evident, we think, and it is also a favorable sign that there is a diminished supply of cheap butter for the British market. These facts, together with a falling off in the cotton oil product, equivalent to about 20 per cent. of the average crop of lard, should have a tendency to offset the heavy increase in the production of lard during the current year, which may be looked for as a result of the enormous corn crop of 1895. But with the large present visible supply the outlook cannot be considered bullish, and there is obvious warrant for the easy tenor of the market which has prevailed since the first of the year."

THE "SOFT COAL CORNER."

The Boston *Commercial Bulletin* says: "Not for years has the coal industry of the country been in such strong hands as at present. A few days ago we were informed of the perfecting o the anthracite combination, and are given to believe that the eastern bituminous producers have practically organized. The formation of such a combination is not wholly a surprise, as it has been slowly developing for months.

"But there was doubt regarding the successful accomplishment of the plan, as it involved a new departure. It had become something of an axiom in the trade that combination was hardly possible, so vast and scattered were the interests to be embraced. Anthracite coal is found only in Pennsylvania, but bituminous is obtainable in almost every state in the Union, and the supply is almost limitless. A combination of simply the seaboard shippers, which includes the four great mining sections known as the Cumberland, Clearfield, New River and Pocahontas regions, would hardly be able to maintain their market against the western producers with whom they compete in neutral markets. To get the east and west to coöperate has been a great problem.

"It has been demonstrated, however, by the recent action of producers that some arrangement exists. Within a fortnight the Grand Trunk Railway entered the market for coal. The eastern and western miners sent in their bids, the former for delivery at Portland, and the western companies for delivery west of Montreal. The bids of all the companies were higher than last year by 20 or 25 cents a ton. This amply demonstrated that the American soft coal producers have taken a stand for higher prices, as the Grand Trunk contract is very large, calling for almost 700,000 tons, of which about 40,000 tons is for delivery at Portland. The railway rejected the bids.

"With a much better outlook it was thought time to put prices on a paying basis. This determination on the part of western producers is what promises the success of the eastern combination. By the terms of the agreement each company will secure its old customers for 1896 without competition. Production will be kept down to the necessities of the market while the f. o. b. price is fixed at about 25 cents over that of last year, thus making the standard coals $2.25 shipping port. This would by no means be a high price, as comparison with those of past years show. In 1895 the f. o. b. price of standard coals was about $2 per ton, in 1894 from $2.10 to $2.15, in 1893 it was from $2.30 to $2.35, in 1892 about the same and in 1891 it was from $2.40 to $2.43. The heavy decline in the past five years argues the necessity of putting their business on a profitable basis.

"The coal carrying roads which have a great deal at stake have been the prime movers in the formation of this combination. Much of the reduction in price has come out of freight rates, the low price driving two of the companies into bankruptcy and putting others on a very scant margin. Some of the bituminous carrying roads have been hauling coal 400 miles to tidewater at the rate of ¼ cent per mile. One gets some idea of the cheapness of this rate when those of the anthracite carriers is taken into consideration. The latter get about 1 cent a mile.

"The companies transporting soft coal propose, it is understood, to make the rate $1.30 per ton for the haul of 400 miles. Another project of the new combination is to advance the wages of the workers in the mines at least 10 per cent. Unless this is done trouble is likely to ensue."

PROSPECTS OF THE BRITISH TINPLATE INDUSTRY.

The London *Iron and Steel Trades Review* says: "The condition of the tinplate industry of South Wales has for some months past excited increased apprehensions on the part of those who are engaged in it, principally because of the increasing output of tinplate in the United States, and the probability that the Americans will, within the next few years at the most, be in a position to supply in the fullest degree their own requirements. The fact must be confessed that all the present appearances justify this apprehension. The success of American competition is, of course, affected in a material degree by two considerations—the first, that of the cost at which billets and tinplate bars can be purchased by American tinplate manufacturers, and the second, that of the cost of producing the tinplates. The first of these elements has been a very uncertain quantity for a considerable time past. The prices of steel of all kinds have fluctuated during the last six months by 20s. to 35s. per ton, and while these violent fluctuations continue manufacturers are uncertain as to how they should place contracts for the purchase of raw materials or semi-manufactured products such as bars, and the same influence causes a great deal of difficulty in quoting prices for the finished commodity. But no one seriously anticipates that the prices of American steel are likely to be permanently higher than the prices quoted in Europe. The American steel manufacturers have now practically reached a point where they can produce as cheaply as those of Great Britain. Booms may now and again inflate prices to an abnormal level, but that level will only be temporary, and the price level of the last two years is much more likely to be the ruling range than the higher prices that have been current since July of last year. From this point of view, therefore, our tinplate manufacturers have not much comfort to take. Low prices have almost certainly come to stay.

"Nor are the American manufacturers likely to be much behindhand as regards their technical and industrial circumstances. Labor, of course, is much more expensive in the United States than it is in South Wales, and the American mills cannot have the same command of girl and boy labor, which are not nearly so largely employed in the United States. But the Americans are an inventive people, and they are employing themselves with might and main to improve upon and cheapen the processes followed in South Wales. A series of articles which recently appeared in one of the leading American trade journals showed in the clearest manner that the American tinplate works are fully equipped for the economical production of tinplates, and in that respect have made great strides during the last four or five years. It is claimed by the Americans themselves that their methods and machines are greatly superior to our own. As to that we would prefer to defer judgment until we know more than we do at present of the comparative conditions of the two countries, but when we remember that some works in the United States have been selling steel rails at £4 10s. and steel ship plates at £5 within the last twelve months, we must not be surprised at anything they may do in the way of bringing down the cost of production of other commodities.

"Happily, there are other countries that offer chances to our tinplate industry besides the United States. The Welsh tinplate manufacturers have at last awakened to a consciousness of the fact that China, Japan and India are entitled to more of their attention than they have hitherto received. The arrangements now being made with a view to developing a larger trade in these countries should prove successful if properly directed. It would be well worth the while of the tinplate manufacturers to raise a fund of £50,000 for this purpose. It would not be a bit too much for so large and valuable an industry. Examples of the more common applications of tinplate, and of other applications specially suited to Oriental needs, should be placed on view in every town of any importance in the East. The natives are poor, no doubt, but they like pretty things, and tinplate would be likely to become popular among them with very little effort on the part of the sellers. We ought also to secure a large market for these products in our own colonies, which are extensive enough to give practically every variety of product to which tinplate can be applied. The organization of the tinplate manufacturers of South Wales has not been what it should be, or we should have had less cause for alarm than we have seemed to have lately. A permanent committee of the trade should be appointed for the purpose of deliberating on the best means to be adopted for pushing business in new markets. If that committee were allowed to disburse a suitable fund where that could be done with advantage, and to appoint suitable agents in countries where markets were likely to be opened up with profit, there would not be that cause for anxiety as to the future that has recently done so much to throw this industry into a condition of despondency and distress."

PRESERVE THE FORESTS.

The Philadelphia *Press* says: "The report from the comptroller of New York state shows that there are 777,392 acres of land in the great Adirondack forest preserve, only a few miles having been added last year. The additions this year, unless there is a radical change of policy, will be much larger and will bring the total amount owned by the state up to nearly 1,000,000 acres. The only fear is that there may be a change in policy. When the Constitutional Convention of 1895 adopted a provision stopping the sale of lands in the Adirondacks, it was believed that the safety of this great natural park had been secured. But the first legislature meeting after the convention adjourned passed a resolution to amend the constitution which would undo most of the work done. If the present legislature passes this resolution it will be submitted to a vote of the people. If the result should be a virtual abandonment of the state's policy with respect to this great park, it will be a source of profound regret to the advocates of forest preservation, all of whom are watching New York's experiment with much interest."

The New York *Press* adds: "The *Press* voices the sentiment of all who believe in the wisdom of maintaining great natural parks like the Adirondacks. The folly of permitting such regions to be

denuded of forests has been amply demonstrated. Aside from all question of maintaining these regions as great natural sanitariums, the utilitarian value affords sufficient reason for preserving them. The influence of the forests in regulating the flow of water is very great. Drought would be far more disastrous in its effects than is now the case were the forests about the headwaters of navigable streams cut away, and the country exposed to the double danger of sudden high freshets in the spring and low water in the summer. Navigators of the Hudson, and manufacturers, merchants and shippers know what this means.

"No subject was discussed in the late Constitutional Convention with more earnest intelligence and thoroughness than this one of forest preservation. The people of the state who adopted the work of the convention by such an emphatic vote are not likely now to turn about and reconsider their action, especially when by so doing they would very seriously menace some of their own most vital interests."

Distilling and Cattle Feeding Company

REORGANIZATION.

To holders of Certificates of the Manhattan Trust Company issued under the plan of reorganization of the Distilling and Cattle Feeding Company:

During the progress of the reorganization it has been suggested to the Reorganization Committee by parties in interest that the new corporation should be placed in position to control the distribution of its own product through a distributing company.

The Committee has expressed the opinion that a full opportunity to participate in the stock of such distributing company should be offered to the holders of the certificates of the MANHATTAN TRUST COMPANY, issued under the plan of reorganization. This view having been concurred in by the parties who have organized the distributing company, your attention is called to the following announcement.

RICHARD B. HARTSHORNE,
JOHN I. WATERBURY,
FREDERICK M. LOCKWOOD,
JULES S. BACHE,
WILLIAM E. HUTTON,
Committee.

NATHAN BIJUR, New York,
JOHN L. CADWALADER, New York,
MORAN, KRAUS & MAYER, Chicago,
Counsel.

NEW YORK, February 12th, 1896.

OFFICE OF

AMERICAN SPIRITS MANUFACTURING COMPANY,

Mills Building.
NEW YORK, February 12th, 1896.

To holders of Certificates of the Manhattan Trust Company issued under the plan of reorganization of the Distilling and Cattle Feeding Company:

One of the first steps following the organization of the AMERICAN SPIRITS MANUFACTURING COMPANY has been to bring about the formation of a distributing company capable of handling, if necessary, its entire product.

Such corporation, known as the SPIRITS DISTRIBUTING COMPANY, has been organized under the laws of the State of New Jersey with a capital stock as follows:

First Preferred Cumulative 7 per cent. stock	$2,100,000
Second Preferred Non-cumulative 6 per cent. stock	1,575,000
Common stock	3,675,000
Total	$7,350,000

The entire issue of common stock and one share of the second preferred will be owned by the AMERICAN SPIRITS MANUFACTURING COMPANY.

Holders of MANHATTAN TRUST COMPANY'S D. & C. F. Co. certificates are offered the option to subscribe at par for the first preferred stock of the Distributing Company to the extent of six per cent. of the par value of their holdings or any part of such holdings; receiving in addition fifty per cent. of the amount of their subscription in second preferred stock.

For the convenience of certificate holders the Manhattan Trust Company has consented to act as depositary, and to ascertain such holders the transfer books of certificates for Distilling and Cattle Feeding Company's stock will close Monday, February 24th, 1896, at 3 P. M., and open Wednesday, February 26th, 1896, at 10 A. M.

Blank forms of subscription can be obtained upon application to the MANHATTAN TRUST COMPANY, Wall st., corner of Nassau, New York. *Subscriptions must be delivered at the office of the Manhattan Trust Company not later than 12 M. on Saturday, March 7th, 1896, together with check for the first instalment of 15 per cent.*

Second instalment, 15 per cent., payable on March 21st, 1896.

Third and fourth instalments of 15 per cent. each, payable respectively as called, on notice by mail of not less than 15 days to the registered holders of the subscription receipts and at intervals of not less than 15 days.

It is not at present intended to call the remaining four instalments of 10 per cent. each. That amount is designed to provide for the possible extension of the business of the Distributing Company into territory other than that now contemplated, or for future requirements.

Temporary receipts will be issued by the Manhattan Trust Company, upon which will be endorsed payment of each instalment.

Upon payment of the fourth instalment of 15 per cent. and surrender of the temporary receipt, subscribers will receive the certificates of first preferred stock 60 per cent. paid together with the second preferred stock to which they will be entitled.

The privilege now offered to holders of Manhattan Trust Company's D. & C. F. Co. Certificates has been underwritten by a syndicate.

Application to list the stock of the Distributing Company on the New York Stock Exchange will be made immediately.

In consequence of the formation of the SPIRITS DISTRIBUTING COMPANY, THE AMERICAN SPIRITS MANUFACTURING COMPANY has been enabled to make advantageous arrangements for the distribution of its product in the territory east of Buffalo and Pittsburg at a cost of distribution far below any hitherto paid. The AMERICAN SPIRITS MANUFACTURING COMPANY will control the distribution of its product west of Buffalo and Pittsburg, through the ownership of a majority of the stock of the Spirits Distributing Company.

Under its contract with the Manufacturing Company, the Distributing Company will take the product of the Shufeldt Distillery at Chicago and the St. Paul Distillery at St. Paul; and, if required, will also take the product of ten thousand additional bushels daily for distribution in the East. This product is taken by the Distributing Company at market price, and is paid for in cash, the Distributing Company agreeing to employ in its business a minimum of $1,000,000 cash. The Manufacturing Company leases to the Distributing Company for the term of 999 years the H. H. Shufeldt & Co. Distributing Plant with all its appurtenances and machinery, and will, pursuant to a written contract, make a fixed annual payment to the Distributing Company of $120,000, payable quarterly, beginning May, 1896. In the event of the Distributing Company extending its business as above provided, and calling up the remaining instalments of 10 per cent. each on the First Preferred Stock, the Manufacturing Company will, as provided in such contract, make a further annual payment of $20,000 for each additional installment of 10 per cent. paid in, the total annual payment being limited to $200,000. The amount thus to be received annually by the SPIRITS DISTRIBUTING COMPANY will be sufficient for the dividend of 7 per cent. upon the instalments paid in on its First Preferred Stock.

THE AMERICAN SPIRITS MANUFACTURING COMPANY, under the arrangement described above, controls an independent and powerful distributing agent to handle its product without the expense heretofore paid for the service, and practically without cost, as the estimated earnings of the Distributing Company from its general business, in addition to the fixed annual payment from the Manufacturing Company above referred to, warrant the belief that they will be sufficient to pay dividends upon the Common Stock held by the Manufacturing Company.

The opportunity to participate in the profits of the distributing business is now offered to the stockholders of the American Spirits Manufacturing Company.

American Spirits Manufacturing Company.
By S. M. RICE, President.
By order of the Board of Directors.

INVESTMENTS.

INCOME SHARES

CLASS "C" COUPON SHARES are sold at $85. per share, together with a purchase premium of $5. They pay a fixed preferred dividend of 6% per annum on the par value of $100. per share or 6⅔% per annum on the money invested.

Dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any bank.

CLASS "D" COUPON SHARES are sold at par, $100., together with a purchase premium of $10. Fixed dividend of 8% on par value or $7\ ^{27}/_{100}\%$ on money invested. Coupons payable January 1st. Collectable through any bank.

Withdrawable after sixty days' notice, together with dividend accrued thereon.

The desirability of these shares, from which to derive a cash income, is unquestionable.

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to repr. sent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, FEBRUARY 29, 1896.

Further expressions of opinion are forthcoming in favor of the establishment of a permanent system of arbitration for the settlement of disputes between the United States and Great Britain. A notable meeting was held at Philadelphia on Saturday last at which a resolution in favor of the establishment of such a system was adopted, and the support of the meeting was pledged to the movement for a national convention at Washington. The Philadelphia meeting was in reality an interstate affair, owing to the presence of men of distinction from many states. Among the incidents of the meeting was the receipt of a letter from President Cleveland, who naturally took ground in favor of arbitration, declaring that it should be entirely unnecessary for him to assure those who advocate the cause of his hearty sympathy with any movement that tends to the establishment of peaceful agencies for the adjustment of international disputes. Expressions of opinion similar to those adopted at Philadelphia have received public indorsement at a number of other cities, and the indications are that the Washington gathering will have a significance which has often been wanting in similar meetings.

Evidence in relation to the Venezuelan boundary dispute is beginning to pour in upon the commission. The original documents, maps and records collected by the commission appointed by President Crespo are being forwarded to Washington, where they are expected to arrive in a week or so. The Venezuelan government has appointed as its counsel before the commission Mr. W. L. Scruggs, of Georgia, who was formerly United States minister to the South American republic. It is understood that the claims of Great Britain, with the evidence relied upon to sustain them, are also about to be laid before the commission. The documents received from both Great Britain and Venezuela, taken in connection with the researches prosecuted by the commission on its own account, should furnish that body with an exhaustive mass of evidence, by the light of which to arrive at its conclusion in references to the true boundary line between Venezuela and British Guiana.

The question of recognizing the belligerency of the Cuban insurgents has been the most prominent topic of discussion in Congress this week. The House Committee on Foreign Affairs reported resolutions declaring that, in the opinion of Congress, a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, and that the United States should observe a strict neutrality between the belligerents. The resolutions further declare that the government of the United States should exercise its good offices to secure the establishment of a government by the choice of the people of Cuba. These resolutions were not pressed to a vote yesterday, as had been expected, but their place as a nucleus of debate was taken by resolutions reported by the Senate Committee on Foreign Relations which recognize the belligerency of the Cuban insurgents, and request the President to exercise his friendly offices with Spain to secure the independence of Cuba. The sentiment of both houses, as indicated in the debates upon the question, is apparently overwhelmingly in favor of the resolutions, so that nobody will be surprised by the adoption of the Senate resolutions by the vote of 64 to 6, yesterday.

As regards what is involved in the recognition of belligerency, that is a topic which can only be briefly touched upon in a paragraph, but it may be said upon well-known authority that the recognition of belligerency, while exercising a moral influence in their favor, is not solely to the advantage of the insurgents. They gain, says Mr. Dana in a note to Wheaton, the great advantage of a recognized status, and the opportunity to employ commissioned cruisers at sea and to exert all the powers known to maritime warfare, with the sanction of foreign nations. They can obtain abroad loans and military and naval materials and enlist men as against everything but neutrality laws; their flag and commissions are acknowledged, their revenue laws are respected, and they acquire a quasi-political recognition. On the other hand, the parent government is relieved from responsibility for acts done in the insurgent territory; its blockade of its own ports is respected, and it acquires a right to exert against neutral commerce all the powers of a party to a maritime war. In brief, as one of the latest writers on international law puts it, the effect of a recognition of belligerency is to endow the belligerent community with all the rights and all the obligations of an independent state so far as the war is concerned, but no further.

A step in the direction of realizing the idea of a "Greater New York" was taken last week, when the sub-committee having the subject under consideration submitted a report in favor of consolidating the surrounding municipalities with New York. The report of the sub-committee went over with thoroughness the various arguments both for and against consolidation. It recalled the fact that when the city of New York comprised half a million people, it was a mooted question whether a city of its present size and population could be well governed, and that a few years ago, comparatively, Brooklyn was in the same category. The union of the various localities, the report went on to say, presents no stronger argument against the probability of good government than does their separate and independent existence. The march of progress is in the direction of concentration on every hand, and the largest demands of civilized existence require increased economies, which may be obtained only by concentration. The report took the ground that the interests of Brooklyn will be served by consolidation in an even greater degree than those of New York. The bill submitted with the report was reported by the full committee to the New York Senate on Tuesday, with an amendment including within the greater city the towns of Flushing, Jamaica and a part of Hempstead, which were originally intended to be included.

Regulations under which the appropriation of $25,000 for the naval militia will be distributed have been prescribed by Acting Secretary McAdoo of the Navy Department. Under these regulations one thousand dollars will be reserved to provide books of instruction to be given to the various state organizations. It will be necessary for the governor of each state having a naval militia to certify to the Navy Department the number of commissioned officers, warrant officers, petty officers and enlisted men in the state organization, and where the divisions of the militia are located. Upon the receipt of these returns the Secretary of the Navy will allot to each state a proportionate part of the $24,000, according to the proportion which the number of properly uniformed petty officers and enlisted men returned from each state bears to the total number returned by all the states. One-half of the allotment due to any state whose naval militia is not properly uniformed will be withheld by the Secretary of the Navy until the department is officially informed by the governor of said state that a proper naval uniform has been adopted and issued to its naval militia. The appropriation is a small one, but it is better that it should be systematically distributed, and the regulations will not lose their utility when the amount set aside for this purpose is increased.

A recent interesting incident in Congress has been the discussion of the attitude of Secretary Morton in relation to the question of seed distribution. As is well known, the Secretary has been known as an earnest antagonist of the system of free distribution which he found in force when he entered the Department of Agriculture as its chief. After vainly endeavoring to get Congress to limit the appropriations for seed distribution, the Secretary in July last took the heroic step of issuing an order abolishing the seed distribution bureau on the ground that the Secretary of Agriculture could only purchase for distribution such seeds as were rare and uncommon to the country or such as could be made more profitable by frequent change from one part to another. A great many people regarded this action of the Secretary as exhibiting great good sense, but Congress appears to take the matter differently. In spite of protests from some members that it was going in the direction of pure communism, the House disposed of the question of seed distribution by adopting an amendment to the Agricultural Appropriation bill requiring the Secretary to expend $150,000 in the purchase and distribution of seeds, the best that he can procure, without reference to the requirements of the law about the varieties being rare and uncommon.

Some rather interesting information regarding recent examinations of imported grain in Germany is contained in a report to the State Department by Consul Stephan, at Annaberg, Germany. According to the report Professor Heinrich, of Rostock, some time ago found numerous bacteria in Russian and Roumanian grain which were the more deadly because they could not be rendered harmless even by the heat of the oven. German agrarians therefore hoped, he says, that the importation of this grain would be prohibited in the same manner as American cattle and meat were excluded on account of alleged Texas fever. The agrarian member of Parliament, Herr Meno Rettich, of Rostock, brought the question before the Reichstag. He was informed by the Director of the Public Health Office that sixteen German and seventeen foreign samples of grain were examined by that institution as to impurity from bacteria. The purest was the American; then came Moravian, Bohemian and Hungarian barley; the most impure was Turkish rye.

THE TREASURY AND THE MONEY MARKET.

No striking developments have taken place this week in connection with the government bond issue or the condition of the Treasury. The most noticeable event in the latter connection was the sudden increase of the Treasury net gold balance, as shown by the official statements issued at Washington, from about $106,000,000 to $123,000,000 on February 24. This, however, was a mere matter of bookkeeping, the increase, in fact, representing the amount paid into the special depositary banks for account of subscriptions to the new loan, and which at the date mentioned were, for the first time, it would seem, taken into the general account of the Treasury. Gold deposits for the week have, indeed, been on a very much smaller scale, amounting to only $10,000,000, while the withdrawals were in all some $2,500,000. This would indicate that the heavy payments by bond subscribers are now practically accomplished, and that from now on these payments will be for account of subscribers who concluded to take advantage of the Treasury's supplementary circular allowing payments to be made in installments, among whom, of course, are to be included subscribers who have concluded that it would be easier to obtain gold without paying a premium for it by the delay which this method affords. The extent to which gold may be withdrawn from the Treasury itself to complete the payments to the new bonds is still in doubt. According to the latest figures, the sum yet to be paid in for the new bonds is in the neighborhood of $17,000,000. There is, indeed, very little on which to base any calculations as to how much of this will be required from the Treasury, or how much will come from banks or other sources. On the whole, the impression seems to be that a smaller amount than was at first anticipated will be drawn for this purpose from the government's coffers.

Another feature of the situation, however, deserves attention. The easing off of the money market which had been in progress for the preceding fortnight has been much more marked during the present week. It would seem that the withholding of funds in connection with the bond issue is now at an end, and although some local disturbances still exist in varying degree at interior financial centers, the money market throughout the country may be described as working steadily towards a condition of increased ease. This is certainly the case in New York, although the somewhat inactive demand may account in a measure for the existing symptoms. As it is, there are freer offerings of time money, and the shading of rates necessary to obtain employment for funds has been very much in evidence, resulting in quotations of 4@5 per cent. for collateral loans for all periods. In the same way, while the mercantile paper market is not an active one, there is a better demand for notes of good quality, from both local and out-of-town buyers, and the supply not being at all large, the 6 per cent. rate which ruled a short time ago has disappeared, and this week has seen quotations of 5@5½ per cent. for what is termed double-named paper.

This has naturally had some effect upon the market for foreign exchange. While renewed foreign purchases of securities in general and European participation in the recent bond subscription were effectual in creating the decline in exchange rates, it has to be recognized that the latter movement was also influenced by the slackness of inquiry, due to the difficulty importers and other European remitters found in obtaining funds. The disappearance of stringency in the money market has consequently tended to improve the buying of exchange, and that market displays a decidedly firmer tendency. The rate for demand sterling has also been affected by decreased buying of our securities for foreign account, and rates, which were quoted as low as 4.87½ at the beginning of the week, may be described as firm at 4.87¾@4.88 at its close. At the same time the foreign exchange market is too narrow to indicate any immediate tendency toward gold exports, nor is there an appearance of apprehension on that score for the time being.

PRESENT AND PROSPECTIVE WHEAT SUPPLIES.

The customary number of statisticians, official and voluntary, have rushed to the fore with reports and estimates of the probable quantity of wheat remaining in farmers' hands on March 1 this year as contrasted with like dates in preceding years.

A reëxamination of our own calculation covering this estimate, as published March 2, 1895, inclines us to the belief that the indicated total of domestic wheat "back of available supply" points March 1, 1895, was at least 10,000,000 bushels too small, largely, as now believed, because of too great a dependence on the plausible theory that 40,000,000 bushels of wheat were "fed to cattle" in 1894–95. Corroborative details as to that claim have never been ample, and if 30,000,000 bushels were so fed, it would fully explain the unusual movement.

In directing attention again this year to an independent estimate as the probable total quantity of domestic wheat in "farmers' hands" and elsewhere back of available supply points, it is important to outline the statistical bases of our calculation, owing to careless methods employed by some in dealing with the subject.

The available wheat supply does not include all stocks in store, in transit, in mills and in other resting places between the field and the family flour barrel; but it is likewise true that one who has reported stocks of wheat and of flour, as well as stocks of wheat held by millers for a dozen years, wheat in the United States, both coasts, which originated with BRADSTREET'S, enables us to present the following estimate of, or approximation to the probable total quantity of wheat carried over in the United States on March 1, 1896:

WHEAT IN THE UNITED STATES MARCH 1, 1896, BACK OF AVAILABLE SUPPLY POINTS.

	Bushels wheat.
Crop 1894, 515,000,000, plus available stocks March 1, 1894 (BRADSTREET'S), 109,000,000, plus quantity in "farmers' hands," 126,000,000	750,000,000
Exports during ensuing 12 months 144,000,000 bushels, food 310,000,000 bushels, seed 52,000,000 bushels, and feed for cattle probably 30,000,00 bushels	536,000,000
Total wheat remaining in country March 1, 1895, visible and invisible	214,000,000
Estimated total quantity wheat available on March 1, 1895	105,000,000
Indicated total of wheat back of available supply points, including that in "farmers' hands," on March 1, 1895	109,000,000

This (revised) total of 109,000,000 bushels on March 1, 1895, is contrasted with the government total of 75,000,000 bushels, but includes, as explained, more wheat than can be counted as farm supplies.

Now, if to the total quantity of wheat in the country one year ago—214,000,000 bushels—one adds the crop of domestic wheat produced in 1895, as the government *now* declares, 467,000,000 bushels—the total domestic supply of wheat for the year ending to-day is seen to be about 681,000,000 bushels. Of this we have exported probably 135,000,000 bushels (flour counted as wheat), eaten about 315,000,000 bushels, and sown, perhaps, 52,000,000 bushels, a total consumption of 502,000,000 bushels, pointing to there being a total of only about 179,000,000 bushels of wheat remaining in the country to-day, against 214,000,000 bushels one year ago, an apparent decrease of 35,000,000 bushels. If it should turn out that total available domestic supplies of wheat to-day amount to only 102,000,000 bushels, which will not prove far out of the way, then the calculation furnishes a total of only about 77,000,000 bushels of wheat back of available supply points at this time, as contrasted with about 109,000,000 bushels one year ago.

But it is the opinion of BRADSTREET'S that the government has not gotten its latest total of the domestic wheat crop large enough, the like having been a fault of the official reports for several years. The Agricultural Bureau began its estimates of the 1895 wheat crop at about 390,000,000 bushels, and at latest accounts had made it 467,000,000 bushels. The latter total was used in the foregoing calculation. But it is more than likely that the 1895 wheat crop will continue to increase as we have time to observe its distribution—even as did the crops of 1891, 1892, 1893 and 1894—until it is at least 20,000,000 bushels larger than the government now admits, or about 487,000,000 bushels, against 515,000,000 bushels in 1894.

This would alter the foregoing calculation respecting the probable size of reserves of wheat materially, and indicate that "farmers'" and other interior (uncounted) stocks amount to 97,000,000 bushels, against 109,000,000 bushels one year ago and 126,000,000 bushels two years ago.

On the heels of this, the latest revised returns of the world's wheat crops in 1895, with comparisons, are of especial interest, particularly inasmuch as Beerbohm's total for the United States is found to agree so nearly with some of the foregoing conclusions.

It may be stated that when a similar table was published last October the prospect was for a total world's wheat crop of nearly

LATEST REVISED WHEAT CROP RETURNS AS PREPARED BY BEERBOHM.

Last year it will be recalled that the government total of stocks of wheat in farmers' hands on March 1 was met with general incredulity, owing to its being so much smaller than totals based on reports or estimates by ex-Agricultural Department statisticians, trade papers, circulars, etc. The government reported a total of 75,000,000 bushels of wheat in farmers' hands on March 1, 1895, whereas the trade and some of the technical press had fully counted on a total of 125,000,000 bushels, estimates ranging from 100,000,000 bushels (BRADSTREET'S) to 154,000,000 bushels.

As pointed out a year ago, BRADSTREET'S calculations as to the probable total reserves of wheat included all wheat in the country back of available supply points, an aggregate which must, manifestly, include wheat not in "farmers' hands," and therefore materially in excess of the one furnished by the government. Our estimate of the probable total of reserves of wheat in the country on March 1, 1895, was therefore distinctly corroborative of the government total, although there were and still are abundant reasons for believing the government total was too small.

should know that the latter have no place in such an exhibit.

Such wheat in all similar calculations should be considered flour, and it is true that there are practically no wholesale stocks of wheat flour in this country to be reported.

Flour stocks in retail stores have no place in a statement of available stocks, as the latter term refers to quantities available for, but not included in the retail stocks. Wheat in transit by lake and canal during the season of navigation is reported, while supplies in transit by rail are not, being left to offset themselves one year with the other.

Six or seven years reporting stocks of wheat flour in the United States made plain, what so few ambitious grain publications have discovered, that nominal stocks of wheat flour in the United States range year in and year out at an equivalent of from 5,000,000 to 10,000,000 bushels, most of which is generally awaiting transit at New York, Boston and other seaports, at Chicago and Minneapolis, and represents, at most, the temporary clogging of channels of distribution or interruption in the current of demand.

The work of reporting stocks of available

20,000,000 quarters (160,000,000 bushels) less than in 1894. Now it will be seen that the difference is only 14,500,000 quarters (116,000,000 bushels), the main cause of the increase in the 1895 figures being "the fact that the American crop estimates have had to be increased" 6,000,000 quarters (48,000,000 bushels).

THE TARIFF BILL DEFEATED.

When the Finance Committee of the Senate a few weeks ago reported the Jones free coinage bill as a substitute for the Dingley tariff bill, attention was sharply directed to the fact that the chance of securing the enactment of tariff legislation by the present Congress was slim. If there had remained any doubt as to the matter it would have been eliminated by the result of the vote on Senator Morrill's motion to take up the House tariff bill on Tuesday last, following as that did the defeat of a motion to take up the measure on the 13th inst. Senator Morrill called attention to the fact that there was a deficiency of revenue month by month, which would amount to $30,000,000 for the year. The motion was put to a test, with the result that thirty-three votes were cast against and only twenty-two in favor of it, a two-thirds vote, as will be seen, against considering the measure.

When the result of the vote was announced, Senator Morrill said that he had regarded the previous vote of the Senate on the question two weeks ago as indicating the ultimate failure of the bill, but that he felt it to be his duty in so important a matter to give an opportunity for a change of mind on the part of some senators. No evidence of such a change, he said, was apparent in the vote which had been cast, and while he would welcome any decent bill that would increase the revenues of the government, he did not think it proper to ask the Senate for any further consumption of time as far as the present House bill was concerned.

Senator Sherman made a strong appeal for some action in the direction of providing increased revenue. He disclaimed any idea of partisan feeling in relation to the House tariff bill, which, he said, did not belong to any party. Its only merit was to furnish $40,000,000 additional to the revenues of the government. It was a bill to provide for an occasion. He declared that it was a disgrace to the country and to civilization that the government of the United States was now spending $30,000,000 a year beyond its income. Here was a Congress in session, with both houses fully armed, and with power to furnish the remedy, but Congress was idle and refused to act. He would vote to put a tax on tea, on coffee, or on anything, in order to meet the deficiency of revenue. Every day and every hour we are increasing our debt—and there is no occasion for it. A tax on tea and coffee would be paid cheerfully by the people. Any tax, however obnoxious, would be supported by the people rather than see the funded debt increased. Now that the House has sent so faulty a bill, let the Senate, he said, take it up, make it right and send it back to the House. But for the Senate to adjourn without providing for this deficiency was not a manly action for either of the great parties, or for any one else who was responsible for it. All the arguments for action, however, fell upon deaf ears in the Senate as at present constituted, and there seems little likelihood at present that the complexion of affairs can be changed.

LEADING NEW ENGLAND MANUFACTURING INDUSTRIES.

Leading New England manufactories have not experienced a very active business during the past few months, although at the close the outlook is more favorable in a few instances. High rates for money and uncertainty as to the financial future have had a more or less depressing effect and have done much to keep general operations within conservative limits. The late snowfall has helped the lumbering interests of the northeast to get their logs to mill, while the prospects are favorable for large building operations, and there is expected, consequently, a good demand for iron and steel. With the money market more favorable to borrowers, the outlook should be more encouraging.

COTTON GOODS.

The position of the cotton goods market is yet very unsatisfactory to manufacturers, and the outlook is not favorable. The present trouble dates back to the panic of 1893, when values were much depressed, and the stoppage of machinery was enforced. The short cotton crop last year started a boom that the demand could not sustain, although it resulted in machinery being run full time and stimulation of prices. The cotton crop being short, the price was forced up to a point where it was difficult to manufacture the goods and get a profit over cost. The fact that manufacturers were well supplied with lower cost cotton from the previous crop allowed them to take contracts for goods at only a slight advance over previous low rates, and the capacity of the mills was tested to the full in the endeavor to supply the wants of buyers, who looked for a scarcity of supplies later. The price of goods was gradually worked up with the price of cotton, but at no time has the value of fabrics been on a parity with that of raw material. While cotton goods were bought freely by jobbers and other large operators, the consuming trade has not taken kindly to advances, and the present market is in the position where large stocks of the manufactured goods on hand and a very slow distribution are the features. But purchases of the raw material have been slow, and the price has been forced down 1c. or more from the top, with the tendency apparently towards a still further decline. At prices that the trade were asking for their goods, fabrics would not move, and to start them liberal cuts were made. This was done largely at second hands, but during the past few weeks manufacturers have been forced to acknowledge the situation. They now see that a boom in prices without a good consumptive demand will soon wear itself out. The mills cannot go on at full capacity and convince consumers of a serious crop shortage. The market being heavily supplied with goods, buyers have the whip hand.

Production will have to be curtailed, and stocks of goods on hand offered at a price that will sell them. If cotton is in seriously small supply, that will be shown later. Manufacturers will not continue to pay high prices for raw material and pile up goods.

The print cloth outlook fairly represents the situation. Stocks are steadily increasing and the price is declining. Stocks at Fall River are about 800,000 pieces of extras and odds, but operators in position to know say these figures do not cover the actual stock, but that double that quantity would not represent the surplus on hand.

No cut in the cost of labor can bridge the chasm between the market price and the present cost of production. Where old cotton was held in sufficient quantities to even down the cost of the new, manufacturers have been able to make a profit.

Export mills have enjoyed a good business, the result of large early contracts for cotton at low prices. This has helped considerably to dispose of the goods.

WOOLEN GOODS.

Woolen goods manufacturers have had an unsatisfactory business during the past two years and more. Threatened tariff legislation and actual changes in that direction have resulted in furnishing manufacturers a depressing experience. With the McKinley tariff in force, manufacturers found the markets of this country so filled up with foreign goods that it required a year or more to get the surplus worked off, and by the time the home markets were freed and in position to test the efficiency of the new law, a change in the tariff upset calculations again.

With a prospect for lower duties, buyers reduced holdings and bought sparingly, so that when the lower duties went into effect the trade had light stocks. Under the recent duty the American woolen goods manufacturer claims he has had a hard struggle for business, and while credited with a protective duty of about 50 per cent., he says he has found the foreign manufacturer underselling him in a way not to be despised. Foreign woolen goods are generally sold here duty paid, and while undervaluation is charged, proof of it appears lacking.

The extremely large orders for foreign woolens from this country last year forced a sharp advance in the wool markets abroad, obliging foreign operators to pay much more for their raw material. When orders for this year's business began to be solicited, foreign agents could not offer as low prices as in the previous year, but they have been able to take very considerable orders for goods, notwithstanding. In the meanwhile the price of wool has also been advanced on this side of the water, in sympathy with the advance in London, but owing to the quiet business at domestic mills, wools grown in this country have been advanced in price much less than foreign supplies. The advance in wool has been well maintained, but the call for domestics has been moderate.

Could American manufacturers use domestic territory wools in their goods, they could compete easily in prices with foreign manufacturers, but the styles of goods at present demanded by the trade require the foreign wool, and thus they have no advantage over the foreign manufacturer in this respect. Of late American manufacturers have been working along on a very moderate scale, much machinery having been idle. Prices have been cut "as low as possible," and in this way some business is being picked up. The raw material in the shape of Australian wools is gradually advancing, but domestics are low. Men's-wear woolens for fall trade, now being ordered, have felt the depression of high rates for money, which has been a factor in making orders small. The goods which have sold most readily thus far are medium and low cost overcoatings, in the way of beavers, kerseys and chinchillas. Very liberal fall orders for these goods have been booked, but on the higher class of goods trade is disappointing. These fabrics sold quite well last year in the face of the foreign competition, but from present appearances the clothier did not fare as well.

Suiting woolens have been a disappointment, although cheaper grades have met with a fair business. Fancy worsteds for pantaloons have also done comparatively well. Dress woolens have met with sharp foreign competition.

The mills that can make a plain fabric cheap can keep running quite full, but on fancies the foreign competitor has full sway. It is declared that many classes of goods are being laid down in this country, duty paid, at a less price than the actual cost of production by American manufacturers. The woolen goods industry, as a whole, is very unsatisfactory, but, where manufacturers are able, they are running machinery, letting it lie idle when no orders can be secured. The feeling among manufacturers seems to be that another year will see a change in tariff sentiment.

BOOTS AND SHOES.

The dullness in boots and shoes noticed during the past six months is passing away, and a better feeling is being shown. The large business done in footwear during the fall of 1894 and the spring of 1895 forced prices very high, and left jobbers throughout the country heavily stocked with high-cost goods. The boom of 1894–95 was the result of scarcity and high cost of hides, which were advanced nearly 200 per cent.

The low price was reached during the summer of 1894, when buff hides were sold at 3¼ @3½c. Tanners were convinced that the supply of hides was exhaustless, and were only buying sparingly at the low price. The panic induced shoe jobbers to allow their stocks of footwear to run low. Manufacturers finding leather cheap, took large orders for footwear at low figures, which made tanners buy hides freely. After taking all in sight the price of hides began to advance, and in a few months stocks of hides were so small that South America, Europe and Africa were called on for supplies. This put up prices of hides all over the world. Buff hides, which started at 3¼ @3½c., sold as high as 9½ @10c. at the top of the boom, with others in proportion. The result was to force up the price of leather, and manufacturers of footwear followed with higher prices. Shoe jobbers generally had small stocks when the boom began, but the scarcity of hides encouraged them to buy heavily, and they followed the market up.

The demand for footwear ran to the cheaper grades, which made lower-priced leather in best demand. Prices on heavy grades of men's wear were forced up 25@40c. per pair, the increased cost being on both the upper and sole. On women's wear the advance was only 5@10c. per pair, confined to the sole, increased cost of uppers being trifling. The high prices that manufacturers were forced to ask finally checked sales. Shoe jobbers with good stocks felt that it was safe to wait and see what strength there was left in the demand. Hides and leather were scarce and high, but when the demand for leather decreased, tanners began to neglect hides. When the demand for hides stopped western operators began to offer supplies ahead at lower prices, and in this way the market began its downward career.

Since the spring of 1895 shoe buyers have ordered very sparingly, and tanners have curtailed production considerably, but the demand has been so limited that surplus stock January 1 last was more than enough. In the meanwhile jobbers have been working off surplus stocks, and they are now getting where supplies will soon be needed. With leather lower, manufacturers have reduced prices until men's heavy goods can be bought within 5@10c. per pair as low as at the low point in 1894.

This decline is said to have stimulated the demand, and some very good orders have been recently placed, while the prospect is favorable for quite free buying during the next few weeks.

The outlook is favorable for an excellent trade in footwear, for the country is short of supplies, owing to small purchases during the past ten months. If the hide market is the key to the situation, as was the case on the last boom, it looks as though a good demand for hides might put prices back as high as they were in 1895. There has been little surplus accumulated during the recent dullness, as, through shading prices, hide dealers have been able to dispose of supplies. The world's surplus of hides was absorbed during the last boom. The surplus of leather has been considerable, but a few months of good demand would absorb that, and as this leather was made from high-cost hides, tanners will not be slow to advance prices. Manufacturers who have the leather in sight are safe to take orders for footwear at low prices, but it does not look safe to contract far ahead and be obliged to depend on the market for cheap raw material.

THE LEATHER COMPANY REPORT.

While the United States Leather Company is one of the recent additions to the "industrial" group of Wall street stocks, it has, since its introduction on the market, about three years ago, occupied a rather conspicuous speculative position. The stock has been the object of a great deal of manipulation, and its vicissitudes, as well as the extent of the dealings in it, have tended to make it something of a favorite with that element in our market to which activity in a security is the most important factor. While a corporation formed under the New Jersey laws, the concern is, with justice, classed among the trusts. It was formed with the avowed purpose of taking over the business and assets of a majority of the tanneries and leather manufacturers of the country, its capitalization being upon the generous scale of over $60,000,000 each

of preferred and common stock, and about $5,700,000 of 6 per cent. debentures. The preferred stock is entitled to cumulative dividends of 8 per cent. per annum, and interest of a speculative character has been largely dependent upon the payment of the dividends upon this class of the company's shares. At the same time the great advance in leather and hides, which began last spring and measurably collapsed in the autumn, had no small share in stimulating active speculative operations in United States Leather securities, the dividends on the preferred having began to be paid in March last, when 1 per cent. was declared, followed by similar ones in May, June and August, and one of 2 per cent. in November last. Under the cumulative feature there are now about 14 per cent. of past due dividends on the preferred stock, and it is natural that the possibility of their continuance at this juncture should be the principal motive in determining the course of the stock in the market. It is understood that while a portion of the management favored a further dividend last year, they were outvoted, and lingering hopes on this score were set at rest by the failure of the directors, at a meeting which preceded the annual stockholders' meeting, to declare one.

The annual report of the concern, made public on Wednesday, would, however, explain this course. It states explicitly that the year 1895 was an eventful one in the leather trade, but that the uneven course of the business militated against the company. The general improvement in the latter part of 1894 continued during the first months of 1895, with a violent rise culminating in June, after which there was a steady, and latterly a rapid, decline in prices. Owing to the limited demand for leather in the last four months, the company was obliged, it seems, to borrow money, and in the items of its balance sheet appears an item of $3,000,000 borrowed on debentures in the treasury.

The statement of the company can scarcely be regarded as either full or favorable. The only figures given as to operations for the year are that the earnings amounted to $9,367,854, and that $3,654,000 was paid in dividends, leaving a surplus of $5,683,854, and a total surplus on the books of $6,470,-609. The statement of quick assets foots up $32,000,000, but this includes only $1,000,000 in cash or bills receivable, with $3,000,000 or so due on leather sold. Leather, hides and bark on hand is inventoried at about $12,700,000, and there is an item of $15,400,000 odd for advances made to the constituent and proprietory tanning companies against hides and leather of over $15,000,000. All the items of the balance sheet show large increases over the corresponding figures for 1894, but the impression left by the report is that the company has encountered a year of great variation in prices, which have presumably made its financial operations a matter of difficulty, and which, to say no more, renders the suspension of dividends for the present a conservative policy.

STATE TAXATION OF NATIONAL BANKS.

A case recently before the Supreme Court of the United States for decision raised the question under what circumstances a state statute may be held to discriminate against national banks in not allowing debts to be deducted from their shares in taxation. The case arose upon an action brought by the First National Bank of Garnett, Kansas, against the sheriff of Anderson county to restrain him from levying upon the property of the bank on a warrant for the collection of taxes upon its stockholders, on the ground that certain deductions claimed on the part of some of the stockholders from the assessment upon their shares of stock were not allowed them, as they claimed should have been the case, under the statutes of the United States.

The stockholders based their contention on section 5219 of the United States Revised Statutes, which provides in reference to national banking associations that: "Nothing herein shall prevent all the shares in any association from being included in the valuation of the personal property of the owner or holder of such shares in assessing taxes imposed by authority of the state within which the association is located, but the legislature of each state may determine and direct the manner and place of taxing all the shares of national banking associations located within the state, subject only to the two restrictions—that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such state, and that the shares of any national banking association owned by non-residents of any state shall be taxed in the city or town where the bank is located, and not elsewhere. Nothing herein shall be construed to exempt the real property of associations from either state, county or municipal taxes to the same extent, according to its value, as other real property is taxed."

This statute the stockholders contended was contravened by a Texas statute, which, while permitting certain kinds of debts owing in good faith by any person, company or corporation to be deducted from the gross amount of credits belonging to such person, company or corporation in listing their property for taxation, does not allow owners of shares of stock in national banks to deduct their indebtedness from the value of their shares of stock.

The Supreme Court of Kansas affirmed a judgment in favor of the sheriff, and this judgment has been in turn affirmed by the Supreme Court of the United States. In the opinion rendered by the federal court of last resort, Mr. Justice Peckham directed attention to the fact that the Kansas statute treats shares of stock in a national bank upon a perfect equality with and in the same way as shares of stock in a state bank, for the purpose of assessment and taxation. At the same time he cited prior decisions of the court to the effect that the main purpose of Congress in fixing limits to taxation on investments in shares of national banks was to render it impossible for a state in levying such a tax to create and foster an unequal and unfriendly competition by favoring state institutions or individuals carrying on a similar business and operations and investments of a like character.

Having this idea in view, Judge Peckham said that from the record in the case it was wholly impossible to determine that there was any discrimination against the holders of national bank stock. In order to arrive at a decision in favor of the bank it would be necessary, he said, to decide that the amount of moneyed capital in the state of Kansas from which debts may be deducted, as compared with the moneyed capital invested in shares of national banks, was so large and substantial as to amount to an illegal discrimination against national bank shareholders. This, the judge declared, the court could not do in the absence of proof upon the subject, particularly in view of the fact that the state court had itself determined from its own knowledge that the credits from which debts may be deducted do not constitute a large or even material part of the moneyed capital of the state, and, on the contrary, that court says that debts secured by liens on real estate, money invested in corporate stocks of all kinds and descriptions, including railroad, banking, insurance, loan and trust companies, and all the multifarious forms of moneyed securities, moneys on deposit subject to call, and other forms of invested capital, constitute the great bulk of the moneyed capital in that state, and from all such moneyed capital no deduction for debts is allowed. Summing up his view of the case, the judge expressed the opinion of the court in the declaration that the single fact that the statute of Kansas permitted some debts to be deducted from some moneyed capital, but not from that invested in the shares of national banks, was not sufficient to show such a violation of the federal banking law as had been asserted.

THE SEAL BILL PASSED IN THE HOUSE.

The fur-seal bill reported by the Ways and Means Committee was brought up for consideration in the House on Tuesday, when the report of the committee was presented by Chairman Dingley. As has been already indicated, in order to prevent the extermination of fur seals, which will soon take place unless prompt measures can be taken to prevent pelagic sealing, this bill authorizes the President to invite Great Britain, Russia and Japan, or any of them, to unite with the United States in the appointment of a joint commission to investigate the present condition and habits of the fur-seal herd in the north Pacific ocean and Behring sea, and the method of slaughtering the same, with the result of such slaughter, and report what further regulations, if any, are necessary for its preservation, with a view to their adoption and enforcement by the countries uniting in creating such commission. Pending this investigation the President is authorized to conclude a modus vivendi with such governments, or any of them, providing for such new or additional regulations as may be deemed expedient for the preservation of the fur-seal herd, said modus vivendi to terminate January 1, 1898. If, however, the President finds himself unable to secure the coöperation of Great Britain, especially, in securing the modus vivendi authorized by this bill, so as to protect and preserve the Alaskan seal herd for this year's sealing season, then the Secretary of the Treasury is authorized to take each and every fur seal on the Pribilof Islands and to sell the skins of said seals as he may elect, and to cover the proceeds into the Treasury.

It was pointed out in the report that the necessity for the course proposed arises from the fact that the Alaskan fur-seal herd is being rapidly exterminated by pelagic sealing vessels—mainly Canadian—which follow the seal herd as it moves along our Pacific coast in the spring and enter Behring sea at the end of the close season in August, when they are free under the ineffectual regulations adopted by the Paris tribunal to use the spear—more deadly than the shotgun—in killing outside of the sixty-mile zone the seals that frequent these waters in pursuit of food. As these seals are mainly females that have brought forth their young on the Pribilof Islands, the killing of the mother seals results in the starvation of the young upon the land and the inevitable rapid extinction of the fur-seal herd. The rapidity of the decline of the valuable herd which annually resorts to the Pribilof Islands of Alaska, mainly on account of pelagic sealing, will be seen when it appears that in 1874 this herd numbered about 4,693,000. In 1890 the herd had been reduced to 1,039,000, and at the close of the season in 1895 to about 175,500, 44,000 seals, mostly females, having been killed during the last season by pelagic sealers, and about 30,000 pups having died of starvation in consequence of the killing of the mother seals.

As bearing on the situation, it is worth recording that while the United States government received almost $6,000,000 between 1870 and 1890 from the lessees who were given the exclusive privilege of annually killing 100,000 male seals above one year of age, it received in 1890, under the new lease, $269,673, in 1891 only $46,749, in 1892 only $23,972, and since 1892 it has received nothing (notwithstanding $550,-000 is due), because of a claim of the lessees for a reduction of rental which awaits determination by the courts. Thus, it will be seen, a formerly valuable source of revenue is being lost to the Treasury by the operations of the pelagic sealers. As regards the chances of the herd itself surviving, it is pointed out that while a year ago it was the estimate of experts that if all killing had been stopped then it would take five years to restore the herd to its former number, it is now estimated that if regulations can be secured before the next season opens the herd can be restored in ten years. If, however, the pelagic sealers are permitted to avail themselves of another season's opportunities for slaughter under the ineffectual regulations of the Paris tribunal, it is believed by experts that the herd will be so nearly exterminated as to make it very difficult to restore it, and that if pelagic sealing continues, within five years not only the Alaskan herd but also the Russian and Japanese herds will be well-nigh extinguished.

There appears to be no difficulty in securing joint action by Russia and Japan. Great Britain seems to be the only uncertain quantity. The report of the Ways and Means Committee produced such an effect in the House that that body voted unanimously in favor of it. It is expected, also, that the Senate will vote in the same way, so that the question of seal preservation will have been settled once for all before any great length of time has elapsed.

THE DISRUPTION OF THE ATCHISON SYSTEM.

Although the reorganization of the Atchison, Topeka & Santa Fé Railroad has been successfully accomplished, the work of reconstruction has not extended to the three principal auxiliary portions of the former system of lines. The St. Louis & San Francisco, Atlantic & Pacific and Colorado Midland properties still remain in the hands of receivers, who, in the case of the latter road, at least, are inclined to act in entire independence of the Atchison. The Atchison reorganization committee, while making provision in the amount of new securities which may be issued by the new company for the acquisition of these former components of the system whenever they were capable of being reorganized, wisely shrank from including the roads in question in the

plan put forth and carried to completion last autumn. How great the difficulties in this instance are is shown by the latest developments. Indeed, it now seems altogether probable that both the Colorado Midland and the San Francisco roads will be formally severed from the Atchison system and recognized under terms which will give the latter company but little, if any, interest in them.

So far as this concerns the Colorado Midland property, there is probably little cause for regret on the part of the Atchison stockholders. The purchase of the line was an ill-advised one, and may be placed among the sins of commission of the old management, which, after the first reorganization of the Atchison, promptly proceeded to overload and overcapitalize it beyond any hope of its being able to work out its troubles by dint of earning capacity. Operated as a mere offshoot of the Atchison, and not with a view to developing its own traffic to the best advantage, the line has been a burden to the parent company, and the sacrifice of the increased capitalization created to acquire the control of Colorado Midland may not be unadvisable in the end. At any rate, the Colorado Midland bondholders control the situation in regard to the road, their receiver is in possession, and the policy they will pursue is likely to be without any regard for Atchison interests.

The situation of the San Francisco property is somewhat different. That property has a more intimate as well as extended relation to the principal Atchison lines. By it the Atchison obtains its entrance to the city of St. Louis, and, operated in opposition, it is capable of being a serious competitor with Atchison at many points. At the same time the latter company has joint interests with it in the Atlantic & Pacific and other lines, while a considerable amount has been advanced by the Atchison on account of the controlled road, and constitutes a barrier to the latter's successful reorganization. It is, however, known that the bondholders of the San Francisco, represented by their various committees, have rejected the proposals suggested by the Atchison general reorganization committee, and reports have been circulated that immediate steps would be taken to secure a reorganization on lines which would completely sever the two properties. The following statement, however, which comes apparently from a well-informed source, indicates that after all there are serious obstacles to the realization of such ideas. The information in question is to the effect that "the Atchison reorganization committee purchased about $5,000,000 St. Louis & San Francisco bonds, and a prominent holder of Atchison securities, on his own account, purchased a large block, which makes a majority of the consolidated bonds which the Atchison board can command. The 'Frisco road will be reorganized by its own interests, but the Atchison will have a large representation on the 'Frisco board, and we can control the policy of the road and have it work in harmony with us. The Atchison does not intend to have the two roads cut each other's throat competing for business.

"As to the Atlantic & Pacific, the only difference of opinion is as to the price to be paid for the Atlantic & Pacific property. The Atchison board might be willing to pay a little more for it than earnings warrant. There is no doubt that in time some agreement will be arrived at between the two roads, though if we cannot come to terms a new line to California may be built, which on the present low basis of railroad supplies could be done perhaps cheaper than to buy the Atlantic & Pacific. Atchison directors have talked over the matter, but only in a general way. The Atchison could not afford to leave the Southern California road's excellent business to the tender mercies of another road."

GRAIN GOING TO GULF PORTS.

The Joint Traffic Association, as the compact ratified by the trunk-line railroads and put into force on January 1 is called, has not been in existence long enough to demonstrate whether it is a permanent factor in the railroad situation or not. Some little cutting of rates is said to have occurred, but though prominent railroad officials who took an active part in formulating the new plan are quoted as saying that the roads as a class are again guilty of violating their solemn obligations to maintain rates, and not to change them except through the machinery which the association provides, it would seem that, on the whole, there has been much less demoralization since the new agreement went into effect than at anything in recent years. The very fact that dissatisfaction is openly expressed on the part of the smaller roads and indirect routes at the way the large companies are living up to the agreement and forcing their less opulent fellows to do the same thing would certainly indicate that there is a substantial enforcement of the new agreement.

Another feature of the situation is, however, attracting great attention, not in railroad or financial circles, but on the part of shippers. This is the large amount of corn for export which is now going to Europe via Galveston and New Orleans, to the loss of New York as a port of shipment. The complaint of New York interests is that this is due to the enforcement of the Joint Traffic Association rates.

The *Railroad Gazette* in its last issue discusses this subject from the railroad point of view. It says: "The shipment of large quantities of corn from Kansas and adjoining states to Europe by way of Galveston and New Orleans continues to be the subject of much discussion. The grain merchants of New York complain of their loss, while the farmers of Kansas are complaining because the New Yorkers' loss is not large enough; that is, because they cannot send corn to Galveston at the very low rates which the railroads made in December and continued until January 20. Meantime the shippers tributary to the Illinois Central are sending large quantities of corn south by that road, and, it is said, a good deal of wheat also. The exports of corn from New Orleans in January were over 3,500,000 bushels, or about three and a half times as large as in the same month of 1895. The first week in February New Orleans exported four times as much corn as New York.

"The New Yorkers attribute their woes chiefly to the joint traffic agreement, which keeps freight rates from the west as stiff as an I-beam, though they also admit that transferring grain from cars to boats costs more than it ought to at New York. The Kansans, after enjoying temporarily a rate of about four mills per ton per mile (absurdly cheap on roads of such thin traffic as those between Kansas and Texas), naturally conclude that that is the normal basis and should be the permanent one, and the state railroad commissioners are presenting the shippers' demands to the railroad companies. The Texas commissioners are working on the same line.

"We are inclined to think that neither of these parties will get what it wants, though the Kansans will come the nearer to it. Conditions have changed a good deal all around, and some of the changes in the currents of traffic are more likely to be permanent than in former years.

"Various causes," the same authority continues, "have contributed to the free movement of grain to the Gulf of Mexico. The distance from Wichita to Galveston is only about 700 miles; the direct roads in this territory are now large, strong companies liable at any time to have a lot of cars and engines temporarily idle that can be used to carry any freight that can be had, at cost. These roads have brought some little cotton north this season, and may have been willing to take corn south at less than cost to help pay for hauling the cars back. Galveston harbor is now accessible to ships drawing twenty feet of water, and has a big, new elevator, and the railroads had strong local pressure to let the city test its capacity to handle a large volume of traffic. This increased facility for large ships lowers ocean rates, of course, and fewer vessels will have to go to New Orleans to finish out their loads.

"The Illinois Central, with its 1,000-mile line to New Orleans, is working strenuously to stimulate traffic over it. The water has been low in the Mississippi this year, and barges have taken down but litle corn; but even with a good depth of water it is not certain but that the railroad would carry a large share of the grain. It has advantages similar to those by which the New York Central has taken grain away from the Erie canal in increasing quantities of late years.

"The other side of this picture is the same as it always was, though probably less unfavorable. Ships still have to go to New Orleans and Galveston comparatively empty, and the freight cars find it equally hard to get north-bound loads. Tinplate and crockery from Europe have been going to the western states by way of gulf ports, but fruit and tin and all combined make a small volume, and these shipments from Europe have to be taken at extremely low rates. Practically everything paying good rates or demanding quick time is sent through New York."

THE CHEESE TRADE AND CONGRESS.

Cheese exports from this country have fallen off very heavily of late years, the decrease being far greater in proportion than the decline which has been shown in all lines of export trade as a result of curtailed demand from abroad. The result of agitation and investigation as to the causes of the falling off in the shipments of this important product has finally culminated in a bill in Congress to regulate the manufacture and sale of "filled" cheese, the development in which business, it is claimed, is directly responsible for the decrease in the export cheese trade. Just how important to the trade this matter is may be gathered from the fact that in the calendar year 1895 the exports of cheese aggregated nearly 41,000,000 pounds, against 69,000,000 pounds in 1894, and the value of these exports fell off nearly 50 per cent. In the fiscal year 1885 the exports of cheese aggregated 112,000,000 pounds. This heavy decrease in our exports is in striking contrast with the heavy gains in the exports of cheese from Canada. In 1870 this country exported 47,000,000 pounds of cheese, and Canada less than 4,000,000 pounds. During the fiscal year ending June 30, while the shipments of cheese from this country amounted to nearly 60,000,000 pounds, the shipments from Canada were 146,000,000 pounds. In other words, Canada now exports nearly three times as much cheese as the United States, whereas twenty-five years ago Canadian exports were less than one-twelfth of ours.

The importance of this industry to the export trade of New York is shown by the fact that, whereas ten years ago there were 40 different exporters of cheese from this country to Great Britain, to-day there are less than 10, and while the exports in 1879 from New York city to England were over 2,750,000 boxes, valued at $16,500,000, it is estimated that this year the total exports from New York city will not be over 600,000 boxes, valued at $3,000,000. This indicates a falling off of 80 per cent. in seventeen years. By the advocates of the proposed law, the blame for this decrease is placed entirely upon the "filled" cheese industry, and as proof of this they point to the fact that the cheese exports from Montreal, which in the year 1879 were only about 500,000 boxes, valued at a little more than $3,000,000, this year will amount to 2,150,000 boxes, valued at $13,000,000. Canadian exports have increased as rapidly as ours have fallen off. The reason for this, it is claimed, lies in the fact that while the manufacture of "filled" cheese is allowed in this country, it is prohibited in Canada. It is claimed that the English market for American cheese—the largest in the world—has been practically destroyed. English buyers who have been deceived when they bought and paid for fine full cream cheese have turned away from American markets and have placed their orders in Canada. It is not, however, in the export trade alone that damage has been done. The domestic market for cheese is a very large one, the south especially being a heavy consumer, and in that section, it is claimed, "filled" cheese has driven out or rendered unprofitable the sale of good cheese. Several hearings have been given by the Ways and Means Committee of the House to the friends and opponents of the proposed law, for, naturally enough, the proposition to curtail or prevent the manufacture of "filled" cheese has its opponents, who argue in favor of the trade as a legitimate one, and who will undoubtedly offer strong opposition to the passage of any such law.

NEW ORLEANS' INTERESTS.

To the Editor of BRADSTREET'S.

SIR—With Shrove Tuesday or Mardi Gras culminated the carnival in New Orleans. The entertainments were, perhaps, never more elaborate; certainly, the weather was beautiful, and the several new hotels added largely to the comfort of the visitors, among whom were distinguished men in religion, politics, letters and economics.

After eight months' study of the port charges, a joint committee of the several exchanges lately recommended that the city repurchase from the lessees of the city wharves the unexpired lease, which has four years more to run, and the city council promptly voted to appropriate $450,000 out of the drainage fund for this purpose. This is the first step of the joint committee of merchants looking to free wharfage and reduced port charges. This is an important move, and will be recognized as affecting the entire valley of the Mississippi. Wherever

the waters of the valley are drained into the gulf via New Orleans, we have a controlling influence on freight rates which should give us a claim on the exportable surplus products, and the southern staples and imports are providing good return freights. Western grain and western hog products are finding a market in Europe via New Orleans, and southern lumber, cotton and its products, sugar, rice, fruit and early market supplies are returned, and reciprocal trade is encouraged by increased faculties and the promise of our north and south lines to foster the trade. New Orleans has now undertaken to provide practically free wharfage.

The exportable surplus corn of the west is really held in five states, Illinois, Iowa, Nebraska, Kansas and Missouri—and New Orleans is much nearer than New York. The corn must move in the winter, and with such an enormous crop as was purchased this year, prices have been practically fixed by the exporters. With a small crop of cotton and sluggish movement, our railroads have had plenty of rolling stock, and the regular lines of steamers between this port and England and continental ports have largely increased their ocean tonnage. Rates early in the season were very favorable, and the results show that New Orleans has exported: November, $1,607,539; December, $3,135,291; January, $3,507,103; February to date, $1,091,000.

When the lake and canal routes are open a heavy export movement of corn and spring wheat will most naturally seek the Atlantic ports. The very short crop of winter wheat has precluded any exporters of consequence this year, but with a full crop of winter wheat in Kansas, Missouri, Illinois, Kentucky and Tennessee, New Orleans may be counted upon to get a good share of the exports.

It is announced from Washington that the Postal Committee have failed to include the appropriation of $192,000 necessary to continue the fast mail service between New York and New Orleans via Atlanta. There is yet time for the appropriation to be inserted, and it is to be hoped that all eastern and southern cities will promptly instruct their representatives in Congress to see that the service, which should really be improved upon, is not allowed to retrograde.

There is too much politics in Congress and too little attention to the requirements of the business interests of their constituents.

New Orleans, February 24. T.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

According to information furnished this week to the Senate by the Secretary of the Interior, there were on January 1, 1896, pensioners on the rolls as follows: Under the general law, 454,876, of which 100,714 are widows, mothers, children, etc.; under act of June 27, 1890, 481,231, of which 102,822 are widows, mothers, children, etc.; under act of 1873, 3,583, of which 3,567 are widows and 16 survivors; war with Mexico, 20,165, of which 12,241 are survivors and 7,924 widows; Indian wars of 1832 and 1842, 6,979, of which 2,867 are survivors and 4,112 widows; grand total, 966,834 pensioners. On July 1, 1895, this grand total was 970,524. The total loss to the roll from July 1, 1895, to January 1, 1896, is placed at 21,112. During the six months covered by the inquiry, pension certificates were issued as follows: Under the general law, 3,550; act of 1890, 13,314; under sundry acts, 618; total originals, 17,482; reissues amounted to 26,443; total of all classes, 43,925. During the six months period 3,417 cases were dropped for distinctive causes, as follows: For disability, ceased, 2,320; on account of desertion and deficient military service, 169; on account of fraudulent testimony, 83; for vicious habits, 18; for immorality, 102 (all of whom were widows); on account of disloyalty of soldiers, 537; for non-dependence, 46; for being pensioned under other laws, 39; disability or death not due to the service, 93; on account of reënlistment, 2; soldiers on whose account claims were made found to be still living, 4; declarations being invalid, 4.

An opinion has just been rendered by Attorney-General Harmon holding that a very numerous kind of bond and investment schemes conducted throughout the country are lotteries, and not entitled to the privileges of the mails. The companies which carry on these schemes are alike in general design, and only differ in details and methods. As a general rule they induce subscriptions by holding out the chance of receiving large sums for small payments, the chance depending upon the numbering of the bonds. It has been urged that the investments offered by these companies do not differ in principle from insurance, and are, in fact, fairer and better, because the bondholder does not have to die or lose his property to realize on them. The Attorney-General says that the fallacy of this contention consists in confusing mere chance with uncertainty. One's property, he says, may not burn at all, and the time he will die is not known, but neither event depends upon mere chance, and the law, therefore, recognizes contracts contingent upon them, while it does not countenance lotteries. The Attorney-General, therefore, concludes that all companies which promise payments to part only of a class, who all stand on an equal footing, leaving the selection to depend on any rule of hazard, whether such payments constitute the entire scheme of their business, or are connected with other features which would not by themselves be objectionable, come within the provisions of the anti-lottery law, and are not entitled to the use of the United States mails.

One of the most gratifying incidents in connection with the investigation being conducted by the Venezuelan Boundary Commission has been the intimation on behalf of President Markham of the Royal Geographical Society that the society would be glad to put at the disposal of the commission such cartographic and other information bearing on the dispute as is in its possession. Secretary Malet-Prevost, in replying to this offer for the commission, while expressing cordial thanks for the offer, implies that among the many documents already secured here and now being studied, a portion of the data belonging to the Royal Geographical Society may be duplicated, although without doubt the commission has yet to find considerable important matter. However, as both Great Britain and Venezuela have announced their determination to supply all the information they possess, it is thought likely, he says, that through one or the other of these sources the commission will secure all the facts known to the Royal Geographical Society, and it is therefore considered wise to defer taking definite action on the suggestion until after the cases of Great Britain and Venezuela have been received and studied. The offer is regarded by the secretary as evidence of confidence in the commission, and in the thoroughness with which it is expected to do its work.

Information of interest to cigar and tobacco manufacturers is given in a special dispatch to the Baltimore *Sun*, which says, in reference to certain questions often asked in relation to the rights of cigar manufacturers and the distinction between cigar makers and tobacco manufacturers: "One of the chief questions generally asked is as to the rights of cigar manufacturers in the matter of selling scraps to another manufacturer. Whenever a manufacturer desires to sell his stems, shorts or refuse scraps and sweepings of tobacco to another manufacturer of tobacco, snuff or cigars, to be further manipulated, manufactured or mixed with other grades of tobacco, he is compelled to apply to his collector for a special permit to make such a sale or transfer. In making such application the number of the manufactory must be given, the kind and quality of tobacco he wishes to sell, and at the same time the name of the manufacturer to whom he wishes to make the sale must be stated. All such applications must be made through the collector, who under law is obliged to file it in his office."

"Another question frequently propounded is whether a cigar manufacturer is a manufacturer of tobacco. It would seem that a person who handles tobacco in any form for the purpose of converting it into either chewing, smoking tobacco or cigars is a manufacturer of the article, but the law recognizes a distinction between a manufacturer of tobacco and a manufacturer of cigars. A manufacturer of cigars in the broadest sense is held to be a manufacturer of tobacco because he prepares the leaf for manipulation. But there are rules and regulations governing the two classes, which practically make a slight difference between a cigar maker and a tobacco manufacturer. A third question that seems to be equally frequent with those interested in the tobacco business is, must a tobacco manufacturer use different or separate premises for each department of his business? He must, says the law. Two cigar manufacturers cannot occupy the same premises at the same time. No cigar manufacturer will be allowed to operate more than one factory within the same limited and described factory premises nor to have more than one factory for the same premises, nor can he use such premises to carry on the business of a tobacco manufacturer or dealer in leaf or manufactured tobacco, or, in fact, to carry on any other business deemed to be incompatible with the business of manufacturing cigars."

It appears that, in consequence of the attitude assumed by the Prussian government towards American insurance companies, American consuls in Germany are being besieged with inquiries for information as to the standing of American companies. According to a report of Consul Tingle, of Brunswick, to the State Department, scarcely a day passes that he does not receive such inquiries, indicating a doubt of the soundness of the American companies that is simply absurd. The consul says that, outside of the proscriptive requirements made of the companies by the Prussian government, certain agents of other companies, in their zeal to secure business, did not hesitate to picture the American companies in the blackest colors. To meet this the consul strongly urges the American companies to circulate in Germany compact printed statements of their financial condition, the state machinery of inspection provided to insure their proper management, and other information of a reassuring character.

CURRENT BUSINESS NEWS.

Industrial.

A general strike of lithographic artists, ordered by the "National Lithographic Artists' and Engravers' Insurance and Protective Association of the United States and Canada," began in New York city Monday. The strike, which is said to be mainly for recognition of the association, involves about five hundred men and twenty-five firms.

The specifications for 6,000 tons of armor have been prepared by the Naval Bureau of Ordnance and will be presented to Secretary Herbert in a few days for his approval. The material is required for the two battleships to be built at the Newport News works and will be of nickel-steel, acceptable on much the same conditions which surrounded the armor under the contract of last year.

About 3,000 persons attended a mass meeting in Chicago on Monday night in support of the strike of the garment makers.

The Cincinnati clothing cutters and trimmers struck on Tuesday to compel a recognition by the employers of their right to organize.

A general strike of the garment workers in Baltimore is threatened.

A new kind of fuel has recently been made in Boston. It is a mixture of Mexican asphalt and peat or turf, compacted and baked together. There are said to be exhaustless deposits of bitumen or asphalt in Mexico, which the people there have attempted successfully to burn, but it would melt and run and thus give trouble.

A dispatch from Deadwood, S. D., reports the conclusion of an important mining deal in connection with the Black Hills district, whereby a New York syndicate has acquired control of a large block of the stock of the producing mines of that district, at a cost of $1,100,000.

Nova Scotia coal is to be shipped to Boston, there put into Otto-Hoffmann ovens and made up into coke, fuel and illuminating gas, and numerous by-products. The fuel gas will be distributed by pipes into Boston and neighboring towns within a radius of 25 miles, and the coke will be shipped to foundries and blast furnaces at so low a cost as to revive the iron industry of New England.

A Denison, Tex., dispatch says that an agent "of the Liberian government is making a tour of the state, organizing colonies. There will be a large exodus. The colonists have been promised 30 acres of land apiece, a yoke of oxen, provisions for three months and innumerable other things by the Liberian government."

A Chicago special says: "Wire nails will be advanced 15c.—to $2.57—next Monday, as ordered at the last meeting of the Manufacturers' Association. In anticipation of the advance jobbers and dealers have bought liberally. A year ago nails were 90c."

Great activity is reported in the development of the oil region in southeastern Kansas. It is estimated that 2,000 wells will be opened within the next six months.

The Nashua Manufacturing Company, of Nashua, N. H., has agreed to locate at Cardora, Ala., a cotton mill which will cost $600,000. There is also to be built at Oxford a $50,000 cotton mill.

The mills and factories established in the United States "by the Salvation Army are now giving employment to 10,700 persons."

The first needle factory in the United States, according to a Chicago dispatch, is soon to be established in that city. The needles are to be made by a machine invented by a resident of Detroit, which, it is claimed, can turn out 2,500 needles an hour at a materially lower cost than the present price of imported needles.

The total capacity of the Bessemer and open-hearth steel mills of this country is placed at 7,000,000 tons annually. Mr. Swank makes a preliminary estimate of the open-hearth output of 1,000,000 gross tons in 1895, the record having been 784 936 gross tons in 1894, while the Bessemer production is placed at 4,909,128 gross tons. The former record was 4,168,435 gross tons in 1892, but that was a year of almost uniform activity.

It is said that nearly one-fourth of the illuminating gas manufactured in Philadelphia is unaccounted for except by leakage and other wastes, the exact quantity lost in 1895 having been 1,002,140,315 cubic feet, of a total of 4,422,752,000 cubic feet. The gas works are owned and operated by the city, but of the total output just mentioned 1,694,687,000 cubic feet are water gas bought from a private company. The city manufactures coal gas only.

Three beet-sugar factories in California have the past fall turned out 50,000,000 pounds of granulated sugar, while the Utah factory has made 7,500,000, a product worth nearly $2,500,000.

Commercial.

The stockholders of the National Linseed Oil Company, in Chicago, on Thursday last agreed to call for a special meeting to reduce the capital stock from $18,000,000 to $9,000,000.

The members of the Baltimore Corn and Flour Exchange have adopted a plan for a change of name to "Chamber of Commerce" and a consolidation with other trade organizations.

A vessel loaded with 15,000 bales of jute butts crossed the bar at Galveston on Sunday, drawing twenty-one feet and three inches, "the deepest draught of any vessel that ever went into or out of Galveston harbor."

The Tennessee Coal & Iron Company reports for eleven months of the fiscal year as follows:

Net	$1,102,501	$641,000	$810,400
Charges	643,669	716,400	723,600
Surplus	$458,832	Def. $75,400	Sur. $95,800

A Philadelphia dispatch says that a local car company has obtained a contract for twenty-six trolley cars for Cape Town, Africa. A steamship which sailed from that port for Russia carried $250,000 worth of locomotive and other materials.

There is a bill before the Albany legislature to provide for a state warehouse and elevator at Buffalo to elevate grain at cost. It is claimed to be a necessary adjunct to the canal, and "essential to maintain the canal's supremacy as a regulator of railroad freight rates, as well as to protect New York city's export grain trade."

The consular returns of exports from Bradford to the United States show that the year has commenced well, the total showing an increase of $503,380 over the corresponding month of last year, and being larger than that of any month in 1895 except August.

One Chicago estimator places the amount of wheat in farmers' hands on March 1st at 157,000,000 bushels and the Chicago *Trade Bulletin* at 109,000,000 bushels.

The exports of corn from New Orleans in January were over 3,500,000 bushels, or about three and a half times as large as in the same month of 1895. The first week in February New Orleans exported four times as much corn as New York.

Thoman, a Chicago statistician, estimates the farm reserves on March 1 to be 157,000,000 bushels against 165,000,000 year ago. He says the reserves in six principal winter wheat states east of the Rockies are 15,000,000 less than year ago, and some is of unmerchantable quality. It makes the reserves of corn 1,100,000,000 against 568,000,000 year ago.

The San Francisco *Financial Letter* is informed by dry goods houses there "that there has been a decline of nearly 10 per cent. in their business within the last four weeks, and they do not expect much change until Cougress takes some intelligent action."

An exchange states that the extension of the uses of ramie fiber has been very much interfered with by the need of a process which would bring it into fit condition for combing. An Englishman is said to have solved the problem, and has exhibited specimens of the fiber before and after being subjected to his process, and also showing it in different stages up to the manufactured article, both alone and in conjunction with other yarns. "The nature of the liquid used is kept secret."

Financial.

The following securities were sold at auction this week at New York:

$2,000 Great White Spirit Company 6 per cent. 1st mortgage gold bonds, due 1915. (All coupons hypothecated)	$220
10 Shares The Roberts Land Company, $100 each (hypothecated)	$1
4 Shares Rochester, Thousand Islands & Ogdensburgh Navigation Company of Saugatuck, Mich., $50 each (hypothecated)	$5
10 Shares Central Paint, Oil & Varnish Company, $100 each (full paid general capital stock) (hypothecated)	$5
100 Shares National Bank of Commerce, $100 each	$204
4 Shares Delaware, Lackawanna & Western Railroad Company, $50 each	162⅛⅝
4 Shares Lake Shore & Michigan Southern Railroad Company, $100 each	149
4 Shares New York Central & Hudson River Railroad Company, $100 each	98
4 Shares Western Union Telegraph Company, $100 each	85
2 Shares Chicago, Rock Island & Pacific Railway Company, $100 each	74
2 Shares Equitable Gas Light Company of New York, $100 each	210
150 Shares National Citizens' Bank, $25 each	135
22 Shares New York & Harlem Railroad Company, $50 each	292½
4 Shares National Broadway Bank, $25 each	245
50 Shares Atlantic Trust Company, $100 each	180
15 Shares Atlantic Trust Company, $100 each	175¾
50 Shares Dry Dock, East Broadway & Battery Railroad Company, $100 each	165½

The recent advance in silver has excited much interest. The New York correspondent of the Philadelphia *Ledger* says: "It is declared by some that the movement was purely speculative, while others say that the reduction in production since the repeal of the Sherman silver purchasing law, and the increase in the demand from India, Japan and other silver countries, make the advance in price natural."

At Lexington, Va., this week, William J. Mahoney, general manager of the Virginia Iron & Railway Company, has been appointed receiver for the company. The company owns and operates mines, a 14-mile railway, a $400,000 furnace, 5,000 acres of valuable land and houses at Goshen, Va. The approximated indebtedness of the company is over $350,000.

The big silver vault of the Sub-Treasury holds over $50,000,000 of silver coin. "It is so full that wooden beams have been put in the vault to hold the bags of silver up and prevent their falling on the heads of the employees. The Secretary of the Treasury will be asked for permission to store some of the silver in the outer spaces of the vault."

The Commercial Cable Company reports for the year 1895:

	1895.	1894.	*Changes.*
Gross earnings	$1,961,597	$1,729,283	Inc. $232,314
Interest	48,140	44,151	Inc. 3,987
Total earnings	$2,009,738	$1,773,434	Inc. $236,304
Expenses	794,340	762,996	Inc. 31,344
Net earnings	$1,215,308	$1,010,438	Inc. $204,870
Dividends	700,000	700,000	----
Surplus	$515,308	$310,438	Inc. $204,870

Railroads.

The *Railroad Gazette* says that since January 1 12,500 freight cars have been ordered, including 2,000 for the New York Central and 1,500 for the Lake Shore. In few weeks preceding January 1 the Pennsylvania Railroad ordered 5,500 cars, and other roads 1,500. In 1895 only 32,000 cars were built, against 17,000 in 1894 and 51,000 in 1893. With orders for nearly half the number already given there seems liklihood of a larger number of cars than 50,000 being built in 1896.

The Chicago, St. Paul, Minneapolis & Omaha Railway Company reports for year ending December 31:

	1895.	1894.	*Increase.*
Miles operated	1,492	1,492	----
Gross earnings	$7,508,764	$7,297,619	$211,145
Operating expenses	4,836,652	4,946,184	*109,532
Net earnings	$2,672,112	$2,351,435	$320,677
Interest and rentals	1,535,878	1,521,437	14,441
Balance	$1,136,234	$829,998	$306,236

The Chicago, Milwaukee & St. Paul Railroad reports gross earnings for January of $2,329,622, an increase of $435,244 as compared with the same month of last year, and net $787,713, an increase of $148,253. For the seven months ending January 31 the gross earnings were $20,397,344, an increase of $3,707,875 as compared with the corresponding period of last year, and net $8,690,308, an increase of $2,716,786.

The Northern Pacific Railroad reports gross earnings for January of $1,163,922, an increase of $146,110 as compared with the same month of last year, and net $326,097, an increase of $167,412.

The Iowa Central Railroad reports gross earnings for January of $67,472, an increase of $47,890 as compared with the same month of last year, and net $64,097, an increase of $24,577. For the seven months ending January 31 the gross earnings were $1,114,674, an increase of $143,687 as compared with the corresponding period of last year, and net $435,934, an increase of $99,294.

The Northern Central Railroad reports gross earnings for January of $511,208, an increase of $20,618 as compared with the same month of last year, and net $110,842, a decrease of $13,408.

Some very large equipment orders have been reported in the last few weeks. The contracts for new cars reported last week, for instance, amounted to 6,000 cars. Going over its files, the *Railroad Gazette* finds that the car orders which we have recorded foot up to 12,500. If it includes the orders for new equipment awarded the few weeks before January 1, this total will be largely increased. The car-building concerns have put orders on their books in the first few weeks of this year for about 20,000 cars in round numbers. The actual figure must be larger than that. Twenty thousand cars is a large amount of equipment to be contracted for in two winter months.

The annual meeting of the Delaware, Lackawanna & Western Railroad this week resulted in the reëlection of the old officers. The total number of shares voted was 392,000. The only change was the selection of Taylor Pyne as director in place of the late George Bliss.

Surveys are reported to have been completed along the Florida Keys with the view of constructing a railroad line, in order to afford an all-rail route between New York and the southern point of Florida.

Strong efforts are being made in the New Jersey legislature to put through a bill compelling the Erie Railroad to elevate their tracks in Jersey City.

The New York, Pennsylvania & Ohio Railroad was sold in Akron, Ohio, on Wednesday for $10,000,000 to C. C. Mason, of Cleveland, and Roswell G. Ralston, of New York, representing the English bondholders. There was no competition. The road will pass into the control of the reorganized Erie.

A largely attended meeting of the New York city grain trade was held at the Produce Exchange Thursday afternoon to discuss with several railroad men the diversion of the export grain (chiefly corn) trade from New York to southern ports. The discussion was informal, but earnest, so far as the grain men were concerned. Figures were laid before the railway representatives, and the request was made that the railroads unite to prevent this loss to New York of the corn export trade.

A Chicago dispatch says the east-bound roads are carrying more than the usual quantity of wheat to interior millers, but the provision business is light.

The Philadelphia & Reading Railroad reports gross earnings for January of $1,725,452, an increase of $157,145 as compared with the same month of last year, and net $747,260, an increase of $120,973. For the two months ending January 31 the gross earnings were $3,558,709, an increase of $438,474 as compared with the corresponding period of last year, and net $1,562,998, an increase of $331,849. Fixed charges were $2,162,095, leaving a deficit of $444,570, an increase of $112,003.

Miscellaneous.

The March *Forum* contains "The Nicaragua Canal an Impracticable Scheme," by Joseph Nimmo, Jr., who strangely contends that the scheme from a commercial point of view is impracticable, and characterizes it as one of the flimsiest chimeras that has ever gained human credence.

Foreign.

Officials of the Central and South American Telegraphic Company have received a dispatch about the revolution in Nicaragua to the effect that "Revolution broken out Leon. Liberal departments Leon and Chinandega determined overthrow Zelaya. Trouble threatening some time. Extent movement unknown, but believed serious."

A petition tending to the reëstablishment of bimetallism has been presented to the Senate and Chamber of the Central Society of Agriculture of Belgium. The petitioners base their plea upon the fact that, in comparison with other articles, agricultural produce has been exceptionally affected by the general fall in prices, wheat alone having lost 65 per cent. in value during the last twenty-two years.

It is stated that Sir Frederick Pollock's presentation of the British case has given the greatest satisfaction to the government, and that no great importance will be found attached to the Schomburgk line.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Corporation—Contract—Scrutiny.

The Supreme Court of Illinois held, in the recent case of Evansville Public Hall Company vs. Bank of Commerce, that a contract between two corporations having the same directors will be closely scrutinized, but will not be set aside by the court where the transaction was manifestly fair, and that where a corporation agrees with its president that he shall purchase ground and erect a building, to be paid for out of the proceeds of stock subscriptions, the corporation is liable to third persons for any slight excess of the cost over such proceeds.

Insurance—Agreement—Consideration.

The Kentucky Court of Appeals held, in the recent case of Guenther et al. vs. Carey et al., that where the holder of a policy of fire insurance agreed with appellants after the property was destroyed by fire that the proceeds of the policy should be paid to them in consideration of their undertaking to replace the property, which they did, this was a valid pledge or appropriation of the proceeds of the policy, although there was no writing to evidence the agreement, and therefore the subsequent direction by the insured to his attorney to pay the proceeds of the policy to appellants was not an act of preference within the act of 1856, being merely a recognition of the right appellants had previously acquired.

Wife—Mortgage—Consideration.

The Supreme Court of Indiana held, in the recent case of The Merchants' and Laborers' Building Association vs. Scanlan et al., that the execution by a wife of a mortgage upon the separate lands of the husband as security for money borrowed by him is such a consideration as will support the conveyance of other real estate by the husband to the wife; that where a mistake is made in the description of lands so conveyed the husband may correct such mistake by a subsequent conveyance, and this conveyance will rest upon the original consideration, and that if the mistake (one of description) was of such a character that the wife was not entitled to correct in equity, then it was such that a decree of foreclosure could not be based upon a mortgage containing the same mistake.

Mechanic's Lien—Contract—Notice.

The Supreme Court of Indiana held, in the recent case of Smith et al. vs. Rosenthal, that a mechanic's lien rests upon the owner's contract, and exists as an inchoate interest from the time the work of improvement begins, of which the statute and his own contract give the owner notice; that such notice constitutes "due process of law;" that the averments as to furnishing materials in a suit to foreclose a mechanic's lien, though indirect and unsatisfactory, are sufficient to withstand a demurrer if they necessarily lead to the inference that plaintiff furnished the materials for the building and they were used in its construction, and that the removal or destruction of the building before a notice of intention to hold a lien is filed does not prevent the laborer or material man from acquiring a lien upon the land on which it was erected.

Landlord's Liability—Damages—Storm.

The Supreme Court of Georgia held, in the recent case of The Brunswick Grocery Company vs. Spencer et al., that where a landlord rented a storehouse to a tenant to be used for the storage of groceries, and a violent and unusual storm of wind and rain unroofed the building and let the rain in, which damaged the goods therein, the landlord, in the absence of a contract to protect the tenant against such extraordinary and unforeseen occurrences, was not liable for the damages thus resulting, nor for further damages occasioned by a second rainstorm, unless in the meantime there had been sufficient time and opportunity to have the needed repairs upon the roof; that the measure of damages which a tenant is entitled to recover from his landlord for injury to goods caused by the leaking of water through a defective roof, in case the landlord is liable therefor, is the difference between the market value of the goods immediately preceding the injury and their market value immediately thereafter, and that the action being for the rent of a storehouse, a plea alleging that the defendant rented the premises "upon the understanding that the storehouse was in safe and sound condition, free from all leaks and suitable for the purposes for which the defendant desired to use the same; that the plaintiffs knew for what purpose the same was rented by the defendant, and that after said storehouse was rented and occupied by the defendant for only a short space of time, owing to the unsound condition of the roof upon said building, the storehouse was flooded with rain water, and the property of the defendant * * * was injured and damaged (in an amount stated) and became a total loss to the defendant," cannot be supported by proof that the building was unroofed by a sudden and violent storm, and that the landlord failed to exercise due diligence in having the necessary repairs made.

Insolvency—Assignment—Corporation.

The Supreme Court of Minnesota held, in the recent case of Yanish vs. The Pioneer Fuel Company, that the Minnesota insolvency law of 1881 was applicable to private corporations; that where a deed of assignment under the insolvency law was signed by the president and secretary of a corporation under its corporate seal, the presence of the seal gave rise to a prima facie presumption that it was affixed by the proper authority; that the primary object of the insolvency law of 1881 is a fair and honest division of the insolvent's unexempt property among his creditors, and passive as well as active fraudulent preferences are forbidden; that where the assignee in insolvency brings an action to set aside an execution sale and to cancel the record of the sheriff's certificate thereof, upon the ground that the judgment and sale thereunder constituted a preference permitted by the insolvent in favor of one of its creditors, in such case the defendant was not entitled to a jury trial; that the gist of the action was to remove a cloud resting upon the title, and thus make the property available as assets for the payment of the insolvent's creditors, and that a deed of assignment in insolvency which in terms assigns all of the unexempt property of the insolvent for the equal benefit of all his creditors who shall file releases of their demands against the debtor is sufficient, although the phrase bona fide is not contained therein.

Bank—Note—Accommodation—Receiver.

The Supreme Court of Georgia held, in the recent case of Mayer vs. Thomas, that where a suit was brought by the receiver of a bank, suing for the use of the bank on a promissory note payable at that bank to a named person as cashier, a plea by the maker of the note admitting the truth of an allegation in the plaintiff's petition that the note sued on was a part of the assets of the bank, although denying that the plaintiff was the holder or owner of the note, was properly stricken out on demurrer, it not appearing that inquiry into the ownership of the note was necessary to any defense insisted upon by the defendant, or that the form in which the suit was brought affected or changed the defendant's rights, and that where a person signed a promissory note as maker, payable to a named person as cashier, and delivered it to a firm which wrote its name across the back of the note, carried it to the bank at which it was made payable and obtained full value therefor, the fact that the maker was only an accommodation maker and did not receive or use any of the money obtained on the note would not change his character from that of maker to that of indorser, so as to entitle him to notice of non-payment by the firm, even though the bank knew that he was merely an accommodation maker; nor was such a note without consideration.

Insurance—Loss—Waiver.

In the case of McCarvel vs. The Phœnix Insurance Company of Brooklyn, recently decided by the Supreme Court of Minnesota, it appeared that a fire insurance policy provided that within sixty days after a loss the insured should furnish to the insurer proof of loss containing certain matters and particulars of and concerning the loss and the origin of the fire, and, if required, should furnish the insurer certain other matters and a certain official certificate of and concerning the same. The insured furnished an insufficient proof of loss, which was retained by the insurer, who (when the insured would have but two or three days left in which to furnish a sufficient one) objected to the proof so furnished, and demanded, as necessary to obviate the objections, that the insured furnish the particulars which by the policy he was unconditionally required to furnish, and also said matters and certificate which he was not required to furnish unless demanded, and which were then for the first time demanded. The court held that by mixing up indiscriminately in its objection and demand the things which he was unconditionally required to furnish, and those which he was not required to furnish unless demanded, and by failing to warn him that he had less time in which to furnish the former than the latter, or that a failure to furnish the former within the sixty days would result in a forfeiture, the insurer waived the sixty-day limit and extended the time to furnish the former to a reasonable time in which to comply with all the demands together.

BUSINESS NOTES.

The Tea Supply.

The imports of tea in 1895 amounted, according to the *American Grocer*, to 97,883,051 pounds, a decrease as compared with 1894 of 4,199,651 pounds. The total value of imports was $13,320,341. The movement for the year was as follows:

	Pounds.
Imports	97,883,051
Exports	768,143
Net imports or consumption	97,114,908

China supplied 51,458,868 pounds, or nearly 53 per cent. of the total imports; Japan, 39,914,508 pounds, or over 41 per cent.; United Kingdom, 3,696,192 pounds; all other countries, 2,813,483 pounds.

Insurance Restrictions in Austria.

According to a Washington dispatch, there is danger that insurance companies may have to contend with restrictive regulations in Austria similar to those that have nearly ruined their business in Germany. United States Consul-General Judd, at Vienna, reports to the State Department that the difficulties American life insurance companies have to contend with are very great. The Austrian companies are trying in every way possible to oust them. Whether the Austrian government will finally lend itself to such discrimination remains to be seen.

Rise of Prices in Japan.

According to a Japanese native paper, there has latterly been an extraordinary rise of prices in Japan, and the upward movement seemed likely to continue. The appreciation had been most marked in the case of articles of luxury, the prices of some of which had risen 30 to 40 per cent. as compared with prices in 1893, and among these are included silk and cotton goods. Rice, barley, salt, sugar, fuel, timber and metal goods are also included in a list of twenty-two articles affected by the upward movement. The rise of prices has been accompanied by a considerable rise in wages, which has been assisted by the exodus of laborers and artisans to Formosa and Wei-Hai-Wei.

Taxation in Austra-Hungary.

The London *Financial News* says that the proportion of the common expenses that should be borne by Austria and Hungary respectively seems likely to be revised when the states treaty is renewed. At present Austria contributes 68.6 per cent. and Hungary 31.4 per cent., which is by no means satisfactory to the Austrians, since, if population be any test, the contribution of Hungary should be about 42 per cent., the last census giving Hungary 23,000,000 inhabitants out of a total population of 41,000,000 in the dual monarchy. If the receipts from taxation be the right test, the proportion to be borne by Hungary would be about 40 per cent.

Platinum in New South Wales.

"In view of the enormously increased consumption of platinum in electrical work, it is agreeable," says the *Engineering and Mining Journal*, "to note the well accredited statement that large deposits of this valuable mineral have been discovered at Fitfield, New South Wales. It has been known for several years that platiniferous lead existed in this locality, and the deposits have been worked, though only on a small scale. It is now found, however, that the platiniferous lead is over a mile long, varying in width from 60 feet to 150 feet, and covered with from 60 feet to 70 feet of loam. The precious metals are practically confined to the bedrock and the drift for 3 inches above the bottom. Nuggets which weighed from a few grains up to 5 dwt. have been occasionally found. The crude metal contains about 75 per cent of platinum, and realizes at the present time upon the field 24s. per ounce."

"Free Port" on Long Island.

The *Engineering News* says: "The establishment of a free port at Fort Pond bay or elsewhere in the waters of Long Island sound is the subject of a bill presented to Congress by Mr. McCormick, of New York. This is the scheme advocated by Mr. Austin Corbin. The provisions of the bill propose the treatment of this whole port as a part of the bonded warehouse system. In this port foreign merchandise could be transferred from one vessel to another and loaded upon the piers without being entered or specially bonded, or it could be entered for immediate admission into the country, or warehoused and bonded and exported or entered for consumption. Factories could also be maintained within the limits of the port, and materials might be used and the products exported under regulations prescribed by the Secretary of the Treasury. All vessels entering and leaving this port would be free from tonnage dues, entrance and clearing fees, and from local harbormasters' fees under state laws. All dockage charges and fees for use of piers would be regulated by the Secretary of the Treasury. The proprietors of the port would bear all expenses of opening and maintaining it, including the building of breakwaters, lights, dredging, etc. This port would be practically modeled after those at Copenhagen, Hamburg and Bremen."

World's Telegraph Lines.

A German investigator has announced that the total length of telegraph lines in the world is 1,062,700 miles, of which America has 545,600 miles; Europe, 380,700; Asia, 67,400; Africa, 21,500, and Australia, 47,500 miles. The United States has a greater length than any other country, 403,900 miles, and Russia comes next, although European Russia has only 81,000 miles. The other countries follow in this order: Germany, France, Austria-Hungary, British India, Mexico, the United Kingdom, Canada, Italy, Turkey, the Argentine Republic, Spain and Chili. In point of proportion, however, Belgium leads with 409 miles of wire for every 1,000 square miles of territory; Germany comes next with 250 miles; Holland is only slightly behind Germany, and the United Kingdom has 280 miles of telegraph for every 1,000 miles of country.

Utilization of Water Power In Norway.

According to a dispatch from Christiania, "the estate of Hafslund, near the great waterfall known as the Sarpsfos, between Christiania and Göteborg, has been acquired by a syndicate, chiefly consisting of German and American capitalists, for the sum of 800,000 kroner. The purchasers intend to form a large company, with a capital of 3,000,000 to 5,000,000 kroner, in order to utilize the water power of the falls for electrical force, and establishing aluminium works on the same principle as those now being constructed at the falls of Foyers, in Scotland. The Sarpsfos is one of the finest falls in southeastern Norway, being 74 feet in height and 116 feet in width. The water power is already utilized, however, by numerous sawmills and cellulose factories, and the railway crosses the fall, so that the proposed new works will probably not interfere to any great extent with the artistic aspect of the place."

British Trade and Shipping.

Statistics recently presented at the nineteenth annual meeting of the Chamber of Shipping of the United Kingdom, at London, showed that the total volume of the trade of the kingdom, exports and imports, with transit goods, for 1895 amounted to 83,153,000 tons, or 495,465 tons more than in 1894, when, however, the volume of trade was 11 per cent. in excess of that of 1893. As regarded transit goods, 1895 now held the record. The tonnage (net register) which moved this enormous trade was, on December 31 last, 7,643,108 tons—say 2,163,227 of sail and 5,479,881 of steam, a reduction of 203 sailing vessels, of 127,763 tons, and an increase of 76 steam vessels, of 111,931 tons, as compared with December 31, 1894. The sales of steamers to foreigners had been very large. Japan had bought in the past two years 48 steamers, of 84,634 tons register. One of the resolutions passed urged that no legislature of a British colony should be allowed to impose upon British shipping (not registered in such colony) any further burdens and restrictions than those imposed by imperial legislation.

Telephones in Russia.

It appears from statistics gathered by the *Handels-Museum* that the number of state telephone systems in Russia in 1894 was 34, the number of subscribers 3,938, the length of line 2,582 verstes (1,712 miles), the length of wires 10,125 verstes (6,713 miles), and the number of apparatus 4,397. As compared with 1893, the number of subscribers shows an increase of 32½ per cent., the length of line about 40 per cent., and the length of wire about 38 per cent. In 1894 145,897 messages were exchanged on the state telephone lines. The number of telephone systems worked by private undertakings was the same in 1894 as in 1893, as the government no longer grants to private undertakings concessions for the establishment of urban telephone systems. The subscribers to private telephones numbered 8,004 in 1894, and the length of line was 1,152 verstes (764 miles). In 1894 permission was granted for the establishment of 160 private telephone connections. The telephone is also used considerably by the railways. During the year under review there were altogether in general use 45 telephone systems; the number of subscribers was 11,825, and the length of line was 3,735 verstes (2,476 miles).

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Changeable, and at times unseasonable, weather has continued to unfavorably influence the distribution of general merchandise. Relatively, the most active movement has been of shoes, groceries, dry goods, millinery and light hardware, but, on the whole, the merchandise movement has not materially improved. Jobbers at larger western centers do not anticipate a heavy spring trade, as the outlook is for retailers carrying over larger stocks than expected.

The New York stock market has been reactionary. Public interest has not developed on the success of the bond issue, and the tendency of professionals to liquidate resulted in unsteadiness, and on Friday the market experienced a sharp break on fears growing out of the Cuban situation. The bond market is less active but firm. Increasing ease in the money market on the practical conclusion of the United States bond subscription changes causes increased inquiry for foreign exchange. Demand sterling is 4.87¾. Silver is stronger in London.

Unsatisfactory conditions prevail in the cotton goods, woolen, iron and steel industries. Jobbers in products of cotton mills report that trade drags, notwithstanding cut rates, and that the outlook is that there will be more idle cotton mill machinery. Demand for woolen goods is slower and stocks in hands of retailers are heavier than when last reported. Steel rails, iron pipe and nails are the firmest products of the steel and iron industries, large orders having been placed. Sales of steel billets have been infrequent, and quotations are off 75c. Bessemer pig iron also is quoted 25c. lower, with the market exceptionally slow. Throughout the central western states a large number of iron stacks are idle, which may have an effect on the price of Superior ores.

In addition to renewed activity in the glass industry, large orders, spring delivery, are being placed for boots and shoes at the more important distributing centers, and manufacturers report trade active and prospects encouraging. Leading money markets are easier at the close, but mercantile collections south, and particularly west, have fallen off and are unsatisfactory.

South, general trade is quiet and slow in nearly all lines, there being an exception as to agricultural implements at Memphis, dry goods at Atlanta, and in the movement of staples at New Orleans.

Relatively unsatisfactory reports from western merchandise markets are the rule, but Omaha reports an improvement in business, with Indian corn moving more rapidly, and Duluth the prospect of a good though late spring trade. Live stock on the South Dakota ranges are in excellent condition, and at Sioux Falls trade is heavier than it was in February, 1895.

Price movement of leading staples is more favorable, with advances for wheat, Indian corn, oats, copper, leather and turpentine. Firm or steady prices are noted for wheat flour, coffee, sugar, steel rails, lumber, coal and hides, while reactions appear in quotations for pork and lard, cotton and print cloths, petroleum, Bessemer pig iron, steel billets, and some grades of southern pig.

Bank clearings throughout the United States for five business days ending February 27 aggregate $914,000,000, a favorable exhibit (one holiday), although 16 per cent. smaller than the total last week, inasmuch as it is 20 per cent. larger than the total for the fourth week of February, 1895, and 9 per cent. larger than in the corresponding week of 1894. Compared with 1893, at a period marked by a large volume of business and corresponding bank clearings totals, this week's aggregate shows a falling off of 33 per cent., and of 24 per cent. compared with the like total in 1892; but it is 10 per cent. larger than the total for the fourth week of February, 1891.

The falling off in the total number of business failures throughout the United States a week ago is continued, the total being 271, compared with 276 last week, 234 in the corresponding week of 1895, 272 in the fourth week of February, 1894, 217 in the like period in 1893, and 247 in 1892.

BRADSTREET'S annual estimate of the total quantity of wheat in the United States back of available supply points March 1, 1856, makes it 97,000,000 bushels, against, probably, 109,000,000 bushels one year ago, and, as explained, about 126,000,000 bushels held back of available supply points in the United States on March 1, 1894. An estimate that so-called "farmers' stocks" of wheat at this time are less than 100,000,000 bushels is in contrast with trade and other estimates, which place the total anywhere from 109,000,000 bushels to 155,000,000 bushels.

Exports of wheat (flour included as wheat) from both coasts of the United States this week, 2,206,000 bushels, show a falling off, not only from the total one week ago, 3,149,000 bushels, but as compared with corresponding totals for concluding weeks in February in four preceding years. One year ago the week's exports amounted to 2,689,000 bushels and two years ago it was 2,972,000 bushels. In 1893 the corresponding total was 3,251,000 bushels and in 1892 it was 2,908,000 bushels.

There is a moderate improvement in trade in the provinces of Ontario, Quebec, Nova Scotia and New Brunswick. At Toronto, jobbers report that improved country roadways have resulted in increased orders. At Montreal the quiet is broken by more activity in the distribution of dry goods. At the city of Quebec trade remains dull in all lines, except with shoe manufacturers. At Halifax traders report business unsatisfactory. In New Brunswick, while lumbering is active, shipments of lumber to the United States are small. The outlook for spring trade there is favorable. There are 51 business failures reported from the Canadian Dominion this week, against 58 last week, 44 in the like week last year, 39 in 1894, and 43 in 1893. Total bank clearings at Winnipeg, Toronto, Hamilton, Montreal and Halifax amount to nearly $18,000,000 this week, which is a moderate decline from the week before, but about 14 per cent. increase as compared with the corresponding total last year, and rather more than that as compared with 1894.

FINANCIAL.

The Money Market.

As far as the New York loan market is concerned, there seems to be no doubt that the issue of $100,000,000 new government bonds has been absorbed and digested. The bank statements for the past two weeks indicate the process by which about three-fourths of the amount in gold has been transferred from the banks to the Treasury, and the statement to appear to-day will doubtless mark the culmination of the matter. Increasing ease and an unlocking of loanable funds have been the feature this week. Call money has been more plentiful, and while extremes of 3@5 per cent. were recorded for bankers' balances on the Stock Exchange, the bulk of Wall street's day-to-day borrowings were effected at 3½@4 per cent. Time money is offered freely with a rather smaller demand, and the current quotations in mixed collaterals are 4@4½ per cent. for 30 to 90 days and 4½@5½ per cent. for longer dates. The out-of-town buying of commercial paper is much more eager, and the chief restriction in the market is the deficient supply of acceptable names, the rates at the close of the week for double names being 5@5½ per cent.

Silver.

Japanese buying was, according to the cabled accounts, the prime cause for a rather sharp advance in silver prices at London early in the week. The speculative position of silver, however, has been growing stronger for some little time, and it is also noted that all silver securities dealt in on the London market are considerably stronger. The rise to 31⅝d. per ounce for bars in London and to 69c. here was followed by a slight reaction, but prices have remained strong to the close of the week.

Foreign Exchange.

Dull and depressed conditions prevailed during the early part of the week in the exchange market, but towards its close there was a much firmer tone. The early depression was due as much to the slackness of inquiry as to the presence of more security bills than the market could readily absorb, and the improvement which came later on may be attributed mainly to the fact that the easier state of the money market tended to provide importers with funds and to increase the buying of bills by remitters of all classes. At the same time the apparent evaporation of London's revived purchasing of stocks had a further influence in advancing rates. On Friday it was announced that $500,000 gold had been taken from the Treasury for export to South America.

Posted quotations during the week were unchanged at 4.87@4.88½. The rates for actual business in demand sterling, which were 4.87½ on Monday, advanced to 4.87¾@4.88 by Thursday, and were firm on Friday at that level.

* Holiday.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88@4.88¼; commercial bills, 4.85¾@4.86; francs, 5.18⅛@5.16⅞; reichsmarks, 95@95 7/16.

The Bank of England rate remains unchanged at 2 per cent. The bank this week gained £315,000 in specie, and its percentage of reserve to liability is 63.38 per cent., against 63.22 per cent. last week. In the London open market call loans were temporarily disturbed by the fortnightly settlement, rising from ½ per cent. to ¾@1 per cent. Discounts, however, which were 1⅛@1¼ per cent., were lower at 15/16@1 per cent.

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending February 21, 1896:

	1896.	1895.
Dry goods	$2,811,138	$4,569,178
General merchandise	5,993,310	7,089,785
Totals for the week	$8,804,448	$11,658,963
Previously reported	72,104,393	66,436,548
Since January 1	$80,968,841	$78,095,511

The exports (exclusive of specie) from New York to foreign ports for the week ending February 25 were $3,666,536 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,100,353	$5,826,372
Previously reported	53,549,910	48,690,527
Since January 1	$61,650,263	$54,516,899

THE STOCK MARKETS.

The New York Stock Market.

The market this week was dull and reactionary, but without any large decline, except in special cases, up to Friday, when it broke rather sharply on somewhat indefinite fears that the Cuban question might lead to trouble with Spain. The recession appeared natural in view of the professional character of the preceding advance and the failure to attract any large public buying either here or in London. The foreign influences have, indeed, been adverse. The strained situation in South Africa is not improved by the popular approval manifested in London of Dr. Jameson and his followers, and the fortnightly settlement in that market developed no short interest in American stocks. London, indeed, was a seller of our stocks for several days, though it sent higher quotations on Friday, and at the close of the week seems more disposed to purchase. The market for Americans there is, however, narrow and professional. It may be noted that European buying of bonds continues, though on a more restricted scale than last week.

Professional interests in Wall street have, to some extent, acted on the bear side of the account, though the absence of liquidation and the ease with which the market becomes oversold is an obstacle to their success. There was, however, considerable activity of this kind in Baltimore & Ohio and United States Leather, and a leading bear interest is credited with attacking the grangers. The increased ease of the money market and the fading out of the disturbance due to the payments for government bond subscriptions has caused a hardening of exchange rates, though not to a degree which would make the renewal of gold exports a pressing question. The practical abandonment in the United States Senate of the tariff bill was not productive of any speculative effects beyond a slight advance in Sugar Refining stock. At the close of the week the possibility of complications with Spain were used as a bear argument. The one feature of the market which probably has the most influence is, however, the absence of public interest on only large scale, leaving speculation entirely in the hands of the Wall street professional element and rendering it easy for a break like that of Friday to occur.

The two decided movements of the week were of a bearish character. Baltimore & Ohio stock developed extreme weakness, selling down from 35½ to 26 on what appeared to be liquidating sales. Unfavorable rumors were put afloat, and it was feared that the expert employed by the bankers who are to finance the company's floating debt had discovered some grave and unsuspected facts in connection with the company's condition. This was denied on authority, and it would seem that whatever is unfavorable in the company's finances has been fully and frankly submitted by its own officers in the annual report and in the information furnished to the bankers in question. The stock accordingly rallied to 30.

United States Leather was the other weak feature. The final abandonment of all hope of a dividend on the preferred at present was supplemented by the bad impression created by the annual statement. This, of course, is susceptible of a better interpretation, but the street seems disposed to regard the company as having heavy financial burdens under uncertain trade conditions which might readily result in losses, if they have not already been made.

The selling by London of St. Paul, Louisville and other international stocks encouraged similar activity by the local bear element. St. Paul's January earnings showing a smaller proportionate increase in net than had been expected, was productive of bearish feeling in all the grangers. Sugar was a feature in Friday's decline, falling from 118⅝ to 113½. At the close, however, the market became steadier on short covering, supplementing some notably large buying for London account.

Boston Stock Market.

[Special to BRADSTREET'S.]

There has been more activity in stocks, with general values well maintained. Railroads have held up well. Atchison closed ⅝ higher, with fair trading, while Chicago, Burlington & Quincy declined 1¼ during the week, with Mexican Central ½ point higher. Coppers have shown a strong tone, in sympathy with the firm metal market. Boston & Montana closes 2⅝ points higher, with active trading, while Calumet & Hecla advanced 5 points. Sugar has held strong and closes 1½ points higher. United States Leather preferred fell off 4⅝ points at the close.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending Price Feb. 27, 1896.	Price Feb. 20, 1896.	Sales Feb. 27, 1896.	Sales Feb. 20, 1896.

TRADE FEATURES.

ACTIVITY IN BOOT AND SHOE, GLASS AND STEEL RAIL INDUSTRIES, BUT DULLNESS CHARACTERIZES GENERAL TRADE AND THE COTTON AND WOOLEN INDUSTRIES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, February 28.—The general merchandise markets continue quiet, with trade slow. The money market has been firm during the week, but the close is easier, with money better distributed and the number of offerings larger. Prime mill paper with selling-house indorsement will sell at 5 per cent., while the best collateral loans are quoted at 4¼@5 per cent. on four to six months. Mercantile paper sells principally at 5½@6 per cent. In the boot and shoe trade more orders are being booked by manufacturers, and it looks as though prices were down to a point where buyers had confidence to stock up. Leather is steady and selling rather better. Hides are quite firm but quiet. The iron and metal trade is quiet, although copper is firm. The outlook is for considerable building operations. Lumber is in fair demand, with values about steady. Coal is steady.

Providence, February 28.—There is no improvement to note in general business. Cotton and woolen manufacturers, manufacturers of jewelry, dealers in hardware, etc., all report trade quiet, orders light and margins small. The disposition is to watch accounts closely.

Philadelphia, February 28.—Wool is flat and not much is doing in dry goods. There is no disposition to buy further, except to supply immediate wants; out-of-town orders come in slowly. There is a disposition to scrutinize closely and to cater to trade who deal closely and pay promptly. Large out-of-town orders continue to come in for boots and shoes, but collections are difficult to make. There is a fair trade in drugs.

Pittsburgh, February 28.—There is a steady demand for all staples, and prices are well maintained. The boot and shoe trade report satisfactory sales, particularly rubbers. Business generally is larger than at this time last year, and indications are for an excellent spring trade. The volume of business done in iron is small and prices are a little lower. The market looks uncertain. There is a fair demand for finished material, and inquiries for prices in that line are numerous.

Buffalo, February 28.—Some improvement is noted in dry goods, boots and shoes over last week. The volume of business as compared with 1895 shows an increase. Collections are still reported slow and unsatisfactory. The demand for money is about equal to the supply and at former rates. The outlook, on the whole, is encouraging.

Baltimore, February 28.—The dry goods and notion trades report orders coming in freely from salesmen, principally from the far south. Collections, however, have fallen off very much. Clothing manufacturers do not consider the strike of the tailors that is now on will have any serious effect, as it is between seasons, and it will be fully three weeks before they start to manufacture fall goods.

West and Northwest.

Cleveland, February 28.—From the standpoint of general business the week is without noteworthy change. Dry goods, boots, shoes and groceries are reasonably active. The volume of trade in other merchandise lines is moderate. Country collections are only fair. Iron and steel markets are quiet.

Cincinnati, February 28.—Business continues dull. Collections are difficult.

Chicago, February 28.—Favorable weather has increased the sales of spring dry goods, millinery, shoes and light hardware, but business on the whole shows little improvement. Calls for clothing are not numerous, and jobbers do not expect a heavy spring business, as merchants in many parts of the country did not sell out all the goods bought last fall. Cotton goods are lower, in sympathy with the break in cotton. Leather is moving more freely, large consumers being in the market as buyers, and good sales have been closed. Kips are 2½c. per pound higher, and calfskins are held firmly. There is no reduction in the demand for pig iron, and charcoal irons are 25c. higher than at the opening of the month. Steel rails and rods are freely called for, and prices hold stiff. In other lines there are no new features. Eggs have declined and butter has advanced. Potatoes are weaker, with increased deliveries in the country. Wool receipts, 124,507 pounds.

Detroit, February 28.—General trade conditions continue quiet, with no improvement in collections, which are still slow and unsatisfactory.

Louisville, February 28.—Some improvement is reported by jobbers in many lines, especially dry

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

goods, millinery and hardware. There are large sales of leaf tobacco at fair prices.

St. Louis, Febrnary 28.—Out-of-town and particularly southern buyers are here in considerable numbers, and, while purchasing sparingly, the aggregate of sales of dry goods, boots and shoes, groceries, hardware and millinery is satisfactory. Trade in other lines is only fair, and the retailers are complaining of unseasonable weather, which, if it continues, will leave them with more winter stock than they care to carry over. Provisions are weak and dull. Hides are unsteady, although offerings are increasing. Demand for pig iron is confined to small lots, concessions being granted on certain grades of the southern product. With the exception of increased sales of galvanized sheets, the iron and steel market is unchanged. Collections are still complained of.

Kansas City, February 28.—All lines of trade are sluggish. Collections are slow. Live stock receipts are liberal, with low values.

Milwaukee, February 28.—Trade in general is quiet, though some lines report a slight improvement. Collections are not as good as expected.

Duluth, February 28.—Jobbing trade is better in shoes and hardware. Collections are somewhat improved in farming communities and still good in mining ranges. Miners feel encouraged by favorable reports from the east. Flour is quiet. The weather has been fine for days past. Everybody expects a late spring, and preparations are being made in all lines to meet it.

Omaha, February 28.—Trade in dry goods, boots and shoes and groceries has shown a decided improvement. Corn is moving more rapidly. Collections are not good.

Sioux Falls, February 28.—Wholesale trade is fair, and, it is claimed, shows satisfactory gain over February, 1895. Collections during the month have been fair, but have fallen off during the past week on account of tax-paying time. Retail trade is very quiet. Live stock is in excellent condition. Range cattle will go to market early in prime condition.

Southern Cities.

Charleston, February 28.—Trade report business in all lines quiet. Collections are said to be a little slow.

Savannah, February 28.—There is no change to report in trade or collections over last week. Market on spirits turpentine is advancing, with rosins firm. Sales are equal to receipts.

Atlanta, February 28.—Jobbers in dry goods report an increase of 20 per cent. Shoes are quiet; grocery and grain sales good. Retail trade is improving. Collections are fair.

Augusta, February 28.—No change is reported in the business situation since last week. Trade for February is about a third less than January.

Jacksonville, February 28.—There is no change of consequence in trade. Collections are about the average.

Birmingham, February 28. — Business is unchanged. Collections are fair.

Chattanooga, February 28.—All lines report business fair, and there is a general feeling that times are better than a year ago. Among wholesale dealers collections are satisfactory.

Nashville, February 28.—Jobbing trade in all lines continues in good volume. Country collections are reasonably good. City retail business remains quiet, with dull collections.

Memphis, February 28.—General trade shows some improvement, especially in groceries and agricultural implements. Collections are fair.

New Orleans, February 28.—Jobbers report an improvement in the tone and volume of trade, with fair collections. Local stocks of sugar are being steadily reduced. A fair amount of cotton is moving for export. Money is plentiful, with fair business doing in loans for trade purposes.

Galveston, February 28.—There is a fair demand in all lines, and a number of interior merchants are in the city buying, but jobbers are very cautious in filling orders and still complain of poor collections.

Pacific Coast.

San Francisco, February 28.—Commercial lines are quiet. Produce and fruits, especially dried fruits, are dull, and grain a shade easier. Freights are unchanged but weak. Ocean rates between the sound, Portland and San Francisco cut to $1 a ton. Collections are slow.

Portland, February 28.—The Portland Chamber of Commerce had a meeting this week for the purpose of devising a plan of concerted action in trying to recover the Alaskan trade. There is beginning to be a livelier movement in lumber, and mill men are expecting to extend their trade with China and South America. Wholesale and retail trade in general remains unchanged. Collections are fair.

Seattle, February 28.—Quiet prevails in business circles, as is usual at this end of the month. Milling wheat has again advanced. Forty carloads of wheat have been received this week.

Tacoma, February 28.—General jobbing business fair and Alaskan outfitting trade active. Two cargoes of Washington products, valued at $150,000, were shipped for South Africa this week. Manufacturing interests are progressing and new factories being projected. The construction of a railroad from Tacoma through timber lands and coal fields to Mount Tacoma, at once, is declared to be assured. The enterprise is said to be supported by $3,000,000 of capital.

Canada.

Toronto, February 28.—Wholesale trade is rather better, owing to improvement of country roads. Travelers can get about and are sending in more orders. Payments are slow. Wheat markets firmer.

Montreal, February 28.—Dry goods jobbers report a little more activity consequent on the filling of spring orders. Groceries and teas are in better demand at steady prices. The leather market continues indifferent, while remittances are slow, Quebec city reports business quiet in all lines, with the exception of shoe manufacturers, who are kept busy.

Halifax, February 28.—The week has been characterized by extreme dullness. Travelers report that country buyers are very conservative with respect to orders for spring lines. The flour trade is quiet, and there is no improvement in the foreign markets for fish. Shipments of lumber from New Brunswick to the United States market continue small. The outlook for a good business in the spring is favorable. In the meantime lumbermen are doing good work in the woods.

DECLINING FLOUR EXPORTS.

A Philadelphia *Press* Washington special says: "The House Committee on Ways and Means listened to some interesting testimony given to-day (Tuesday) by W. H. Davis, of Shelby, Ohio, president, and L. S. Curry, secretary, of the Winter Wheat Association, in regard to the decline of the exports of flour since the repeal of the reciprocity treaties.

"In 1893 the total exports of flour aggregated in value $71,753,804. In 1894 the aggregate was $58,924,706. Last year the aggregate was $50,292,886, showing a loss of $21,000,000 in the value of exports of flour for the last calendar year as compared with 1893.

"In the calendar year 1893 the exports to Cuba aggregated in value $2,439,560. For the next year there was a decline of over half a million dollars, and for the year 1895 the aggregate was $1,500,000 less than for 1893. The decline in the exports to Brazil amounted to over half a million, and so on to other countries with which the United States had reciprocity treaties.

"The officials of the Winter Wheat Association want Congress to pass a bill which will retaliate against countries that have adopted discriminating legislation against the United States as a result of our new tariff law. There are 18,000 flouring mills in the United States, employing $208,000,000 of capital and paying wages of $27,000,000. The yearly output is valued at $573,000,000, but it has fallen off considerably since the repeal of the reciprocity treaties instead of having increased rapidly, as was the case before the Democrats changed the tariff.

"It was stated that the mills are now employed to the extent of only half their capacity. While legislation is badly needed, the millers admitted in private conversation that after the vote in the Senate to-day, and in view of the course of the 'deluded silver cranks,' as one of the millers called the free coinage men, there is no hope of any tariff legislation at this session to meet the evil of which the millers complain, or for any other purpose."

BITUMINOUS COAL COMBINATION.

The bituminous coal operators, at a meeting held in Philadelphia this week, agreed to enter into an agreement to maintain prices and restriction of tonnage for the ensuing year. "For some time past a committee of operators from the principal districts have been preparing a plan, which it was hoped would meet the sanction of all interested, and while the meeting yesterday was not a full one, every region was represented, and all present signed the plan. In consequence of this action, the old Seaboard Steamboat Coal Association, which has been a factor in the trade for a number of years, will be disbanded on March 1.

"The new plan," says the Philadelphia *Press*, "calls for a restriction of tonnage and a minimum price (which is to be fixed later) on all coal sent to tidewater points. To effect this the railroad companies have been brought into the plan, and they have prorated the tonnage among themselves, each region being given a certain percentage. and this in turn being subdivided among operators of that district. To effect this organization there will be a committee composed of nine members, which is to be called the executive committee. This committee has been chosen from the various regions, the more important procuring the larger representation. The selection is as follows: Clearfield region, Beech Creek region and Cumberland region, two representatives each; Pocahontas, Chesapeake and Ohio and West Virginia Central regions, one representative each.

"It is thought that this agreement will be maintained, as it will be impossible for the coal companies to ship more than the arranged percentage, as the railroad companies will refuse to haul more than has been allotted. Besides adhering to the amount of tonnage agreed upon, the members of the association also agreed to not sell their coal below a certain price, and as every operator signified their consent to abide by this, there will be very little chance for the cutting of prices. While the new tidewater prices have not been agreed upon, it is understood that they will not be lower than $2.25 per ton at tidewater points. There is a probability that the minimum price will be higher than the above.

"The bituminous coal trade has been in a chaotic state for some time past, and many of the operators have worked their mines at a loss. The competition has been very great, and as business began to fall off prices were reduced, and in this way the cutting grew from bad to worse. The new association takes in every region in the bituminous coal field which ships to tidewater points. The executive committee is to have full control of the affairs of the association, but each operator is to handle his own product. There was some talk of forming a general agency for the sale of all the coal, but this fell through.

"The advance in the price of bituminous coal will not only be beneficial to the coal people, but also to the railroad companies. The roads most interested are the Pennsylvania, Beech Creek, Huntington & Broadtop, Baltimore, Norfolk & Western, Chesapeake & Ohio and the West Virginia Central. The new association will begin operations on April 1, the commencement of the fiscal year of the bituminous coal trade, at which time all the contracts for the ensuing year are made."

NIAGARA'S NEW BRIDGE.

The Buffalo *Express* says: "Within the next six or eight months the new or upper suspension bridge at Niagara Falls will be replaced with a modern bridge of wholly different construction.

"The bridge will be 1,240 feet long, and will be erected on the present site of the new suspension bridge. The center of the bridge on this side of the river will be a few feet west of the center of the present bridge. This arrangement is necessary, owing to the greater width of the bridge, in order to avoid placing the piers too close to the outlet of the Niagara Falls Power Company's great tunnel. On the north or Canadian end the center of the new bridge will correspond exactly with the center of the present structure.

"It will be a steel arch bridge, wholly contained within itself, and will be free from all cables, suspensions, guy or otherwise. It will consist of a main arch span, 840 feet long, and two shore spans. The span on the American side will be 190 feet long, and that on the Canadian side 210 feet in length. The arch span will consist of an open parabolic rib 26 feet in depth, with a rise of 105 feet at the center. The distance between the skewbacks or courses of masonary, which support the ends of the arch on each side of the river, is 68 feet 7 inches. The skewbacks are imbedded in great bodies of cement, stepped into the solid rock, and as the weight of the bridge falls in a lateral direction, the foundation is as solid as rock can make it. The skewbacks on the American side are ready for the iron, and operations on the Canadian side are being energetically prosecuted.

"The total width of the floor of the new bridge will be 46 feet in the clear. Of this 22 feet 9 inches in the center will be given up to a double track for electric cars, 8 feet on either side for carriageways, and 3 feet 9 inches outside the carriageways for sidewalks. Although it will be an exceedingly heavy structure, its great length and general dimensions will dwarf the ponderous street beams and give the bridge a light and pleasing effect. The engineer's revised estimates—the bridge originally was designed for carriages and pedestrians only—are yet incomplete, but it is known that something over 4,000,000 pounds of steel will be required in the construction of the new bridge.

"Undoubtedly there are plans well under way for a s heme of electric railway connection between the sight-seeing trolley system of the American and Canadian sides, but thus far nothing has been made public by the parties most deeply concerned. The ultimate completion of a loop line by means of another bridge across the Niagara river at Lewiston is known to be one of the fondest desires of Capt. Brinker and those interested with him in the 'Great Gorge Route.' The difficulties in the way will now be easily overcome. It is said that the necessary charter has been obtained from the United States overnment, and an application will be made to the Canadian Parliament for similar authority at its next session. The round trip over the new bridge in full view of both cataracts, along the Canadian bluff, over Queenstown Heights to Queenstown, across another bridge at Lewiston, and along the Gorge road to Niagara Falls, is the scheme.

"Only one contract has been let for the construction of the new bridge, that for the masonry. Officers of the bridge company are reticent as to further progress, although they express the hope that the new bridge will be ready for traffic by next fall, at the latest."

AMERICAN BESSEMER STEEL PRODUCTION

The *Bulletin* of the American Iron and Steel Association of the 20th instant says:

"In the *Bulletin* for January 20 we gave complete statistics of the production of pig iron in the United States in 1895, and now, exactly one month later, we have the pleasure of announcing that we have received complete statistics for the same year of the production of Bessemer steel ingots and Bessemer steel rails of all weights and sections in the United States, except the comparatively small quantity of standard rails and a larger quantity of street rails which were made by manufacturers from purchased blooms. In the statistics of ingots produced we include the production of the few Clapp-Griffiths and Robert-Bessemer plants, and also the production of steel castings by all Bessemer works.

"*Ingots.*—The total production of Bessemer steel ingots in 1895 was 4,909,128 gross tons, against 3,571,313 gross tons in 1894, showing an increase in 1895 of 1,337,815 tons, or over 37 per cent. The production in 1895 was much the largest in our Bessemer steel history. The following table gives our production of Bessemer steel ingots in the last ten years.

Years.	*Bessemer ingots.*	*Years.*	*Bessemer ingots.*
Gross tons.		*Gross tons.*	
1886	2,209,190	1891	3,247,417
1887	2,936,033	1892	4,168,435
1888	2,511,101	1893	3,215,686
1889	2,990,204	1894	3,571,313
1890	3,688,871	1895	4,909,128

"With an estimated production in 1895 of over 1,000,000 tons of open-hearth steel, soon to be accurately ascertained, it is probable that our total production of steel in that year exceeded 6,000,000 tons. Great Britain's total steel production has never amounted to 4,000,000 tons in any year.

"The following table gives the production of Bessemer steel ingots by states in 1892, 1893, 1894 and 1895.

States—Ingots.	*Gross tons.* 1892.	1893.	1894.	1895.
Pennsylvania	3,530,794	2,570,220	2,834,545	2,978,924
Illinois	570,052	314,829	581,540	866,531
Ohio	400,855	247,141	363,974	719,954
Other states	48,644	42,496	291,254	343,719
Totals	4,168,435	3,215,686	3,571,313	4,909,128

"*Rails.*—The production of all kinds of Bessemer steel rails by the producers of Bessemer steel ingots in 1895 was 1,266,081 tons, against a similar production of 904,020 tons in 1894, 1,036,353 tons in 1893, and 1,458,732 tons in 1892. The following table shows the production by states of Bessemer steel rails by the producers of Bessemer steel ingots in 1892, 1893, 1894 and 1895:

States—Rails.	*Gross tons* 1892.	1893.	1894.	1895.
Pennsylvania	885,652	600,421	666,866	847,043
Illinois	450,542	322,260	228,866	324,050
Other states	122,538	104,662	71,285	104,988
Totals	1,458,732	1,036,353	904,020	1,266,081

"When we shall have received the returns of the production of Bessemer steel rails from purchased blooms in 1895, it is probable that the total production of Bessemer steel rails in that year will be found to have exceeded 1,350,000 gross tons."

ENGLAND INVESTIGATES HER COMPETITORS.

An English letter of the Pittsburgh *American Manufacturer* is commented on by that paper as follows: "Our English letter this week gives a condensation of the report made by the British investigators who recently visited Belgium and Germany to ascertain why the English manufacturers have to encounter such severe competition from those countries. This report in full will be given in these columns soon, but in the meantime a look at its principal features is quite interesting. As has been stated, this investigation was made by a joint committee representing several associations of manufacturers and a number of leading labor organizations known in the British iron and steel trade. The report made was unanimous; hence it can be said that it represents the views of both labor and capital. The principal point made is that railway rates and shipping freights have the most to do with allowing German iron and steel products to so successfully invade English markets. It is stated that in some cases Belgian iron and steel makers secure transportation at one-third the rates paid by British producers for the same distance.

"When the question of continental competition in the British iron trade was brought up by the appointment of this committee, the *American Manufacturer* held that one great reason, and perhaps the chief one, why English producers were falling behind was to be found in their antiquated methods and comparatively unimproved machinery. This view is largely borne out by the report. The investigators admit that they were surprised at the advantages enjoyed by the German and French works. They say that many of the continental works are better laid out, have better and more modern machinery and appliances, and are better managed than British iron and steel concerns, and that in spite of the fact that the capital expended is in almost every case much less than the outlay upon British works employing a similar number of men. Some of the delegates say they 'never saw such compact and effective works in their lives' as some of those they visited. The Germans have gone into the basic process, an English invention, most thoroughly, and are working it in such a manner as to secure results which are completely surprising to British manufacturers. They make most of their steel, or iron, by that process, and find in it an effective means of meeting, and often of overcoming English competition. An authority in the British iron trade after fully considering the report states that to hold their own British iron manufacturers must 'reorganize some of their works, and keep themselves up to date in processes and plants.'

"Another point interesting to Americans is the stress which the investigators lay upon the effect of a protective tariff in Germany and Belgium. They admit that high tariff has preserved to these countries their home markets and put them in good shape for efforts in foreign markets. And in reference to labor troubles the visitors found on the continent a greater degree of harmony between employers and their workmen than is known in Great Britain. British manufacturers, however, are not dismayed but believe that they can still keep up in the race for the trade of the world."

THE COPPER MARKET.

The London *Daily Financial News* says: "It cannot be denied that the recent course of the copper market has been quite contrary to the anticipations of those who are usually best able to judge. At the end of August, when the stocks of the metal in England and France amounted to 55,432 tons, the price of Chili bars stood at £47 per ton, and, as a powerful European syndicate, including the Rio Tinto Company, was at that time on the point of acquiring an important interest in the famous Anaconda Mine, it was confidently believed that the market would be active at still higher prices. The Anaconda deal was duly perpetrated, and consumption was considerably in excess of supplies up to the end of November; yet, partly owing to lower quotations from New York and partly to the temporary stoppage in the Clyde and Belfast shipbuilding yards, we have seen the price of copper fall as low as £41 per ton, and it is only within the past fortnight that there has been a recovery to £44 per ton. This advance, it may be added, has taken place in spite of an increase in the visible supply from 45,731 tons at the end of November to 46,128 tons at the end of January. It would appear that while American buyers have recently been holding off, in the expectation of even lower prices than those reached, American producers equally refused to sell at the reductions asked, and this accounts for the larger shipments from the United States in the last two months. Reports, however, all go to show that manufacturers are very busy, and that they will before long be compelled to give up a hand-to-mouth policy, and to buy more freely. This is the more likely to be the case in view of the recovery in price which has occurred, and in view of the increased European consumption. Taking the twelve months ended with January 31 last, we find that the deliveries in Europe were 141,643 tons against arrivals of 132,923 tons, while in the year ended January 31, 1895, the corresponding figures were 131,931 tons and 139,627 tons. Thus consumption was nearly 10,000 tons larger, and the supplies were nearly 7,000 tons smaller.

"The controlling factor in the situation is, of course, the North American supply, and since the exports from the United States in 1895 only amounted to 55,401 tons, compared with 71,880 tons in 1894 and 77,414 tons in 1893, the conclusion is obvious that the American internal demand was very much larger in 1895 than in either of the two previous years. For the last two months American shipments have been on a bigger scale, and they are answerable for the European deliveries having fallen short of the supplies about 400 tons in December and January. But, unless the revival in trade in the United States should be checked by further currency troubles, we shall expect that the monthly exports will shrink back to the figures current prior to December; and, if it be so, with the undoubted expansion of business in this country, the price of copper is likely to improve. Mr. Hamilton Smith, in his recent report on the Anaconda Mine, expressed himself as feeling rather optimistic about the demand for copper for the next two or three years, owing to the development of electric traction, and for other reasons; and, as his opinion is shared by other experts who are thoroughly conversant with the movement of the metal, the general belief appears to be in favor of a higher rather than a lower range of prices. Although we have heard it stated that the advance in copper which took place in June, July and August was due to a rig, we have very little doubt that the heavy fall subsequently was not a little due to market manipulation. In any case, it is certain that all the mining companies obtained very much better prices in the latter half of 1895 than they had been able to do for many years past."

AUSTRALIAN WHEAT.

The Adelaide Milling Company of Adelaide, Australia, writes as follows: "We estimated last year that the crop of 1895 would give 126,000 tons for export in addition to 40,000 tons brought over from the previous year, and this appears to have been fairly correct, for the actual export to December 31 was 167,958 tons; therefore we are dependent upon the production of the present harvest for our food and seed requirements and for the grain to enable us to retain our export trade; what that production will be is a problem that cannot at present be solved with more than approximate accuracy, but basing our calculations on similar information that in previous years has proved fairly correct, we estimate that 1,500,000 acres were sown with wheat, and that 500,000 acres of this were cut for hay or are a total failure, and that 1,000,000 acres have been reaped that will yield an average of six bushels per acre, totalling 6,000,000 bushels. Deducting for food 1,738,000 bushels, and for seed 1,125,000 bushels (2,863,000 bushels), leaves 3,137,000 bushels available for export, say 85,000 tons.

"It is estimated that Victoria will have sufficient wheat for her own requirements, and no more. That New South Wales will require to import 2,500,000 bushels, Queensland 2,225,000 bushels, and West Australia 500,000 bushels (5,225,000 bushels), equal to 140,000 tons.

"To meet this requirement New Zealand is expected to contribute 70,000 tons, California shipments, on the water or loading, 25,000 tons, and South Australia's surplus, as above, 85,000 tons (180,000 tons), which leaves a surplus of 40,000 tons, but the extra colonial trade of Victoria, 2,700 tons, and of South Australia, 30,000 tons, will have to be provided for, so that practically there will be no surplus."

ADVANTAGES OF COMMERCIAL MUSEUMS.

At the meeting of the Franklin Institute, Philadelphia, last week, Professor W. P. Wilson gave an illustrated lecture on "Some of the More Interesting Raw Stuffs of the World." The lecturer said that the use of a great economic and commercial museum is many-sided. It is a great power for the general education of the people. The natural products, arranged in series, show at a glance where they come from and under what conditions they are manipulated and manufactured into the various finished articles. A commercial and economic museum means the systematic exploration of the natural products and resources of all countries. It means the scientific study and analysis of products and the establishment of a scientific bureau, with publications therefrom. It also means the extended study of the uses of products, and the practical application of raw stuffs, or applied science.

Professor Wilson illustrated all these points. On a table before him was a pile of sphagnum moss, which came from one of the moss swamps of New Jersey. It was shown how this grew year by year on the surface, the lower parts of the plants settling down and dying, until massive beds of many feet in thickness were formed, resulting in the end in beds of turf. A large piece of turf, formed of sphagnum moss, taken from the Holland beds, and different articles manufactured from the moss were shown. This turf is used in Holland for fuel in engines, for firing porcelain and for general heating purposes. Also as litter for bedding cattle and for placing in floors and walls to deaden sound. When it is carefully washed it produces a fine fiber which, in mass, is used for upholstering. When it is further refined it forms a surgical dressing. When the upholstering fiber is matted together a good felt is produced, which is used for bottoming slippers and other purposes. The finer fibers are also spun into yarns, which are made up into very good looking rugs.

It was stated that in the early opening up of this country our forefathers made wax candles from a material secured by boiling common bayberry fruits and leaves in water. We have found, he said, substitutes for these early products, but in Mexico, Costa Rica, Guatemala and Brazil candles are still made from the same kind of wax. Some very handsome candles, painted with landscapes and birds by the Japanese, made from wax obtained from the fruits of Rhus succedania, were exhibited, together with a large variety of waxes and manufactured materials. Another interesting exhibit was a bottle of fresh milk from the wonderful cow tree of South and Central America. Humboldt discovered this tree in Venezuela, and the milk is still used by the natives in some of these countries.

A complete series of many kinds of rubber from more than a dozen different countries was shown, including the raw sap or milk as it comes from the trees, and, it was said, the rubbers would be light colored if they had not been coagulated by smoking.

A series of coffees was exhibited, beginning with a branch loaded with the berries cut from the tree, fresh berries in alcohol, dried berries from Liberia and South America, coffee covered with the parchment, pearl and common coffees. A description was given as to how these coffees are grown and prepared for market.

In order to show the immense number of natural resources in our unexplored South American countries, Costa Rica was taken for illustration, and Mr. Richard Villafranca, sub-director general of the National Bureau of Statistics of Costa Rica, gave a half hour's lecture on the wonderful resources and natural products of the country. More than sixty colored views of Costa Rican scenery and industries were shown on the screen and discussed by the lecturer. The banana industry was shown to be a very important part of the husbandry of Costa Rica.

NEW ELECTRIC LOCOMOTIVE.

The *Engineering News* says: "The first electric locomotive manufactured under the arrangement entered into some time ago between the Westinghouse Electric and Manufacturing Company, of Pittsburgh, Pa., and the Baldwin Locomotive Works, of Philadelphia, Pa., has been completed at the latter works and sent to Pittsburgh. It is 38 feet long and 9 feet wide over all. The operating parts are all placed on the truck, the body or cab containing only the controlling apparatus, so that it may be utilized as a freight or baggage car, or for carrying the wrecking tools, etc., usually carried by a train. One of the characteristic features of the locomotive is the truck, which has eight wheels 42 inches diameter, and four motors of 200 horse-power each, one to each axle. The entire weight of the locomotive, 100,000 pounds, is thus available for traction. The motors are geared, this method having been decided upon so as to enable the company to use more efficient and durable motors, and it also greatly reduces the cost of the locomotive. It is stated that while the electric locomotive used in the Baltimore tunnel cost $50,000, the Baldwin-Westinghouse locomotive will cost less than one-third of that amount, and will be able to accomplish the same work. The Baldwin-Westinghouse combination will construct engines for road and switching purposes on ordinary railways for suburban and elevated railways, mines, etc. The one just built is intended for passenger service, being rated at 1,000 horse-power capacity. It is expected that the second locomotive completed by the Baldwin Works will

shortly be received at the East Pittsburgh factory of the Westinghouse Electric and Manufacturing Company. This is intended for elevated railway work, and is an example of a motor car adapted for the Manhattan Elevated Railroad of New York. As to the speed of these new locomotives, it is stated that the motors have been geared to produce a speed of 75 miles an hour, although 125 miles per hour may be attained if demanded. All the locomotives will be equipped with air brakes, operated in the usual manner by an air pump underneath the car and driven by an electric motor. They can be used with the trolley system, the third rail system, the Westinghouse electro-magnetic system, or in connection with the Tesla polyphase system."

STREET RAILROADS IN NEW YORK STATE.

The *Railroad Gazette* says: "The Nixon Committee, appointed by the New York legislature last year to investigate street railroad companies, took evidence in New York, Brooklyn, Buffalo, Rochester, Syracuse, Utica, Albany and Troy, and presented a report to the legislature last week. It begins with a statement that railroads are quasi-public corporations, over which the legislature, by wise and prudent legislation, should exercise dominion and control. They are creatures of statutes, and the manner of their organization, the scope of their powers, their method of issuing stock and the power to create obligations, should be clearly prescribed by law. During the last five years nearly all the horse railroads have been changed to electric, but the capital has been increased much more than was needed for the change. 'We have found,' says the report, 'some cases where the companies stand charged with stock, bonds and other indebtedness ten times the actual cost of construction and equipment. In one instance these charges exceed $100,000 per mile of single horse-car track, and this includes nothing but the track itself and street repairs, whereas, in fact, it would cost less than one-tenth that sum to construct it anew. In almost every instance the charges against the company for capital stock issued and bonded and other indebtedness exceed by several times the actual cost of the road, real estate, plant and equipment.'

"The committee believes that capitalization should be limited to about 50 per cent. above actual cost, and recommends a law requiring the consent of the railroad commissioners to all future increases of stock.

"The committee discountenances municipal ownership of street railroads, having found the great majority of opinions against it. As our cities are now governed, such ownership would convert the enterprises into powerful political machines, detrimental to public welfare. Possibly it may be well some time for cities to build and own the road-bed, but the time for this is not yet at hand.

"Regarding the disposal of franchises, the committee does not believe that paying either a lump sum or a percentage of the gross receipts has proved satisfactory, and the experiment of having companies bid against each other by offering a percentage of gross earnings for franchises is termed a fiasco. The committee does not believe in making franchises perpetual, though it is confronted by the fact that most of those now in force have been thus granted. The committee recommends that a bill be passed providing all franchises be sold by lease for a stated period—say thirty years—at public auction to the company offering the lowest rate of fare, and that the lease provide for a further reduction in case the receipts justify it; disagreements to be determined by the railroad commissioners.

"It is recommended that a bill be passed requiring every street railroad in the state, including the elevated lines, to sell tickets as low as thirty for $1, good between the hours of 6 and 8 A. M. and 5 and 7 P. M. each week day, whenever the earnings of any such road are sufficient to pay a dividend of 5 per cent. A system of transfers from one road to another belonging to the same company should, the committee believes, be enforced by statute. The making of a law for the proper heating and lighting of cars is also recommended.

"The overcrowding of cars, of which much complaint has been made, cannot, the committee believes, be well remedied. The practice in vogue in Paris, to permit no passenger on a car unless there is a seat for him, would not, it is thought, be tolerated in this country, where the people would prefer to submit to inconvenience to save time. The committee believes fenders should be required on cable and electric cars, and recommends a law prohibiting one car passing another that has come to a full stop."

COTTON SPINNING IN SHANGHAI.

The Tokio correspondent of the London *Times* in a recent letter says that "certain Japanese capitalists have finally resolved to establish a cotton-spinning mill in Shanghai. There will thus be five cotton-spinning factories in Shanghai. But, while the chief inducement to establish such mills is the supposed accessibility of Chinese raw cotton, no account seems to have been taken of the impediments that may be encountered in that very direction. From time immemorial goods in transit from one part of the empire to another have been subjected to likin taxes of the most onerous description, levied at one place after another along the great water courses and chief roads, and varying according to the rapacity of local officials in different districts. Speaking roughly, there is one likin station in every stretch of ten miles. If the cotton could be carried to Shanghai under pretense of shipment abroad, the taxes levied on it would be only 9 per cent. ad valorem under the Chifu Convention. But no such subterfuge can be resorted to.

"So far as Japan's interests are concerned, already yarns spun by the Japanese mills can be placed in the Chinese markets at prices nearly low enough to defy all rivals, and if the Japanese Diet remove, as it certainly will, the import duty on raw cotton, and if success attend vigorous steps now being taken in Japan to prevent gigantic cotton-wetting frauds perpetrated by Chinese merchants, Japanese mills can count on obtaining command of China's markets. But it looks at present as though all the mills soon to be started in Shanghai will find their prospects completely marred by the heavy imposts levied upon cotton before it reaches their doors."

LIBERAL COMMISSION TO AGENTS.

MERCANTILE CO-OPERATIVE BANK,
Assets, $750,000. Surplus, $50,000.
Madison Sq., NEW YORK CITY.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 7, 1896.

Clear and unequivocal platform utterances on the question of a monetary standard are certainly among the things most to be desired to-day, and the New York Chamber of Commerce has done well to issue the appeal to commercial bodies and business men generally which it adopted at its meeting on Thursday. In this appeal the Chamber expresses its belief that the time has now come for a movement on the part of the commercial bodies, and all men, whether engaged in farming, manufacture or trade, who are interested in commercial prosperity in the United States, to remove from political agitation the question of the permanence of the standard of value upon which all of the business of the country is transacted. The Chamber invites coöperation to this end, in an effort to create a strong public opinion in behalf of an unequivocal declaration by the political conventions of both of the great parties in favor of the maintenance of the existing standard and of the elimination of all doubtful expressions in respect to the reopening of the mints of the United States to the free coinage of silver.

The Chamber declares that the time is past, if it ever existed, for any halting, doubtful phrasing to express the meaning of political parties upon this important subject, and that we must have no platforms that can be interpreted to mean one thing in one part of the land and another thing in another part of the land. It is important, the Chamber says, to every business man, producer and wage earner to put a stop to the enormous cost to the government and to all of our people resulting from the continuance of the agitation in favor of the free coinage of silver, which stands in the way of a revival of confidence and national business prosperity. All citizens are therefore asked to unite in a vigorous effort to urge the selection of delegates to the political conventions of both great parties who will advocate clear and distinct platform utterances in favor of the maintenance of the present gold standard of value. The time, it is pointed out, is short, and action ought, therefore, to be all the more prompt and determined. As has been said, there can be on abstract grounds no two opinions as to the desirability of what the Chamber advocates, which, indeed, is what honest-minded men have been advocating for many years. Political managers, however, are not inclined to take up positions upon abstract grounds. As a general rule they are enemies to all kinds of decisive pronouncements, and it will occasion no surprise to see the currency question juggled with as it has been before.

Disagreement between the Senate and House as to the form of the resolutions to be adopted in reference to the question of Cuban belligerency has led to the appointment of a committee of conference, which has reported in favor of the adoption of the House resolutions, and the present prospect is that they will be adopted by both Houses on Monday. The resolutions declare that in the opinion of Congress a state of public war exists in Cuba, the parties to which are entitled to belligerent rights, that the United States should observe a strict neutrality between the belligerents, and that deploring the destruction of life and property caused by the war now waging in that island, and believing that the only permanent solution of the contest, equally in the interests of Spain, the people of Cuba and other nations, would be in the establishment of a government by the choice of the people of Cuba, Congress believes that the government of the United States should use its good offices and friendly influence to that end.

In view of the fact that the relations of the United States with Spain are to a greater or less extent under discussion at present, it may be worth while to glance at the trade relations between the United States and both Spain and Cuba. A glance at the figures prepared by the Bureau of Statistics of the Treasury Department show that during the calendar year 1895 the imports of merchandise from Spain were valued at $3,826,960 and the exports thereto at $10,594,474, a total of a little over $14,000,000, which represents a falling off of about $3,000,000 as compared with the preceding year. The imports from Cuba, on the other hand, were valued in 1895 at $51,652,125 and the exports thereto at $9,498,054, a total of something over $61,000,000, which represents a decrease of over $32,000,000 as compared with the preceding year. The trade with Spain itself, as will be seen, is comparatively insignificant as compared with that with its troublesome colony in the Antilles. As regards Spain's financial situation, it will scarcely escape attention that that country carries one of the largest debts in the world.

Copyright legislation is again engaging the attention of Congress. One of the measures before that body, the Treloar Copyright bill, has provoked some criticism from the representatives of American authors, who contend that the bill renders it uncertain whether the work of a foreigner can be copyrighted otherwise than through the assignment of his interest to a citizen of the United States and that its effect would be to bring about a revocation of the copyright relations entered into under the act of 1891 with foreign governments. It is well that the fact of this opposition to the bill should be made public. The legislation already had on the copyright question was only obtained after long continued effort, and any change proposed to be effected by new legislation should be brought to the test of public discussion.

Once again the old, old question as to whether the compensation of the subordinate officials of the Department of Justice shall be by salaries or by fees has been raised in Congress. A measure is now before the House in the shape of an amendment to the legislative appropriation bill, which provides a fixed compensation in lieu of fees for the United States attorneys, commissioners and marshals. Statistics show that of late years the expenses of the federal courts have very largely increased, and the increase is attributed in great part to the fee system. It is known that a great proportion of the prosecutions instituted under the present system are unsuccessful, and it is argued by those in favor of the change proposed that the elimination of the incentive of personal gain which is involved in the fee system would result in doing away with a considerable number of groundless prosecutions. Those who are pressing the measure for adoption argue that its enactment will result in a very considerable saving from the outset.

Secretary Morton, of the Department of Agriculture, has asked Congress to establish the office of "director-in-chief" of scientific bureaus and investigations in the Department of Agriculture, to be filled by the President with a broadly educated scientific and experienced man. The chairmen of the committees on agriculture in both houses of Congress have received a number of letters from prominent college professors of different branches of science in advocacy of the project. The statement of the scientific faculty of Yale University may be taken as a sample. The professors say that they regard the plan as a wise one, adding that the practical applications of science in the prosecution of our industries are too numerous and are on too vast a scale in our country to need any argument regarding their importance, and that the work of the Department of Agriculture in this direction has met with the approval of those best qualified to judge, both as to its scientific value and its practical use. In their opinion, efficiency in the work and economy in expenditures will be increased by placing the scientific work under the supervision of a person of high qualifications, whose tenure of office shall be as permanent as that of professors in universities or experts in industrial establishments; and they believe that this is a fit time and the department a practical place for the establishment of such an office, and earnestly and respectfully petition that the measure will be carried out.

A report has been made by the Chief of Engineers regarding the cost of altering three canals in Ohio which the River and Harbor act of 1894 directed the Secretary of War to have surveyed with the view of ascertaining the feasibility and advisability of enlarging them into ship canals to connect the waters of Lake Erie with the Ohio. It appears from the report that three routes were surveyed along the lines of existing canals or streams to make a continuous waterway. The report shows that on either route the proposition is feasible, and that a sufficient amount of water can be secured. All things considered, however, the necessity for transshipment at the Ohio river existing, the report does not find the proposed improvement advisable. The cost of converting the canals into ship canals 70 feet wide and 7 feet deep, with necessary locks, etc., capable of carrying vessels of 280 tons burthen, is estimated as follows: Eastern route, Cleveland to Marietta, $12,299,372; central route, Sandusky Bay to Portsmouth, $18,094,165; western route, Toledo to Cincinnati, $25,011,374. The report contains no recommendation regarding the general question as to whether the canals should be enlarged as contemplated.

It is now probably recognized in Italy that her statesmen and military officials underestimated the difficulties involved in the expedition against Abyssinia. A few days ago the Italian troops were defeated with a loss which late accounts put as high as five thousand men. In Italy the news has been received with a wave of rage and indignation which has swept the ministry of so strong a man as Crispi out of office. So far a successor to the retiring minister has not been chosen, and though a new commander has been placed in charge of the troops in Abyssinia it is uncertain whether the country will continue its campaign in Africa or not, opinion at home being divided.

BANK CLEARINGS INCREASING.

February bank clearings this year are quite encouraging, and are rather in contrast with those of January, showing that the reaction in trade which was reflected in the clearings of January and the closing months last year has been offset by other features. Naturally total clearings in February were smaller than those in January or in any month since March last year; but the percentage of decrease from the January total this year is less than one-half the decrease shown in February, 1895, from January, 1895. The reasons for this are plain. The floating of the bond issue during the month of February undoubtedly caused a considerable augmentation of business at the banks. This is true of New York city, and, no doubt, in a lesser degree at other large cities east and west. It should not be forgotten that February this year included in some states one more business day than did February in the three preceding years, in spite of the fact that two holidays were observed this year in five states of the Union.

Total bank clearings at 68 cities during February aggregated $4,083,486,955, a decrease from January of 10.8 per cent., but an increase over February last year of 20.3 per cent., while the gain shown over February, 1894, when the smallest monthly clearings reported for ten years past were shown, was 28 per cent. Compared with February, 1893, just preceding the panic, the decrease, however, was 19 per cent. An example of the effect of the large business operations in February at New York city on the total volume of clearings may be gathered from the fact that the gain at New York in February this year over last was 27 per cent., while in the remainder of the country the gain was less than 12 per cent.

When the gain of 20.3 per cent. in February this year over a year ago is contrasted with the gain of only 4.8 per cent. in January and of only 16.8 per cent. in the whole of the year 1895 over 1894 a better idea of the satisfactory volume of February's transactions is obtained. The tendency toward enlarged clearings, while most notable at the more important financial centers, was not entirely confined to them, judging from the very general increases shown by the individual cities and by the groups of cities west and south. In only one group of states (the far-west), was the increase in February smaller than for January. In Canada, also, a very marked increase is to be reported for February, in spite of a falling off in the aggregate clearings.

The showings made by the various groups of clearing house cities during February compare with preceding months as follows:

	Dec. 1895.	*Year* 1895.	*Jan.* 1896.	*Feb.* 1896.	*Two mos.* 1896.

Canada	Inc. 20.0	Inc. 7.5	Inc. 1.8	Inc. 14.1	Inc. 7.1

Partly owing to the inclusion of one more business day this year than last in some states the number of cities showing a decrease in February from a year ago is smaller than for many months past, there being only 14 decreases during the past month, as compared with 26 decreases in January. Most of these decreases are to be found in the central west, in the northwest and in the southwest. Almost alone of the large cities in showing a decrease is to be found Cincinnati, with a falling off of 8.3 per cent. Among the large gains to be noted among the larger cities are Minneapolis, 58 per cent.; New Orleans, 42 per cent.; Cleveland, 34 per cent.; Baltimore, 29 per cent.; New York, 27 per cent.; Pittsburgh, 26 per cent.; and Omaha, 23 per cent.; no section of the country, in fact, being slighted in this respect, except, perhaps, the Pacific coast, where, however, San Francisco shows a gain of 11.2 per cent. Among the other increases in excess of 10 per cent. are those shown by Kansas City, 19 per cent.; Indianapolis, 14 per cent.; St. Paul, 11.2 per cent.; Boston, 12.7 per cent., and Philadelphia, 11 per cent. The gain at Providence is 9.7 per cent., and at St. Louis, 9.1 per cent., while Chicago and Milwaukee report gains in the neighborhood of 6.3 per cent. each. Among the smallest gains reported by any of the larger cities are those of Detroit, 1.5 per cent., and of Louisville, 1.2 per cent.

BANK CLEARINGS AT 87 CITIES FOR FEBRUARY, AT 83 CITIES FOR THE MONTH AND TWO MONTHS THIS YEAR AND LAST, AND AT 75 CITIES FOR FOUR YEARS.

TREASURY OPERATIONS FOR EIGHT MONTHS.

Two-thirds of the Treasury year were brought to a close with the month of February, at the end of which the aggregate of the debt, including certificates and Treasury notes offset by an equal amount of cash in the Treasury, amounted to $1,758,325,752. This represents a net increase for the month of over $71,000,000, an increase which of course is owing to the recent bond issue. All the items show decreases except the interest-bearing debt, in which the increase amounts to $75,252,350. The most important item of decrease is $3,991,500 in the amount of certificates and Treasury notes. Another effect of the bond issue is seen in the change in the gold holdings of the Treasury, where an increase of over $68,000,000 in the gold holdings appears as compared with February 1, the total amounting on March 1 to $167,695,998. The silver holdings show an increase of only a little over $1,800,000 for the month, the total on March 1 being put at $507,265,460. The available cash balance amounted to $262,707,006, which represented an increase of $91,115,228 for the month. The gold reserve is given at $100,000,000, whereas a month ago it was a little less than half that amount.

A more satisfactory relation between the receipts and expenditures is shown for the month of February than was the case in the month preceding. The receipts for the month amounted to $26,059,228, which represents a decrease of nearly $3,200,000 as compared with the month of January, but an increase of over $3,100,000 as compared with the corresponding month last year. As compared with the corresponding month a year ago the most notable increase appears under the head of internal revenue, where the increase amounted to over $1,900,000. Customs receipts showed an increase of nearly $600,000, and miscellaneous receipts were nearly double what they were in February, 1895. The expenditures for the month amounted to $26,749,956, which represents a decrease of nearly $5,800,000 as compared with the preceding month, but an increase of a little over $1,000,000 as compared with the corresponding month of last year. The most marked items of decrease as compared with the preceding month were under the heads of civil and miscellaneous expenditures and interest, and the most marked increase was for pensions.

For the eight months of the fiscal year ending with February the total receipts of the government amounted to $224,568,690, which represents an increase of over $14,000,000 as compared with the corresponding period of the preceding fiscal year. The receipts for customs show the largest

increase, over $13,000,000, and miscellaneous receipts showed an increase of not far from $2,000,000, while receipts from internal revenue showed a slight falling off, a little over $1,200,000. The expenditures for the period under review amounted to $242,085,548, which represents a decrease of over $5,000,000 as compared with the corresponding period of the preceding fiscal year. This decrease was mainly due to a falling off in civil and miscellaneous expenditures. Other increases and decreases under particular heads appear in the accounts, the most marked being an increase of over $3,200,000 under the head of interest. The expenditures, as will be seen, show an excess of over $17,500,000 over the receipts for the eight months of the current fiscal year, whereas the excess of expenditures over receipts for the corresponding eight months of the preceding fiscal year amounted to nearly $36,300,000.

WORLD'S WHEAT DECREASE IN FEBRUARY.

Available stocks of wheat in the United States during February decreased 4,647,000 bushels, both coasts and in Canada, less than one-half the decrease in February, 1895, but considerably more than the falling off in February in 1894 and in 1893, and about the same shrinkage as was shown in February, 1892. From this it is noted that February's reduction in domestic and Canadian supplies in 1895 was phenomenally heavy, and that the decrease last month is materially above the average for the February decrease in three years prior to 1895. With this explanation the shrinkage in wheat stocks here and Canada last month is seen to be of moderately bullish character, whereas at first sight, in comparison with the falling off in February one year ago, it appeared quite the reverse.

Details of stocks of wheat available, both coasts of the United States, together with those in Canada, on March 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	*Pacific coast.*	*Totals.*
March 1, 1896	94,538,000	4,296,000	98,834,000
March 1, 1895	98,745,000	11,801,000	110,546,000
March 1, 1894	96,246,000	9,622,000	105,563,000
March 1, 1893	105,223,000	5,470,000	110,693,000
March 1, 1892	64,666,000	3,341,000	68,007,000
March 1, 1891	42,401,000	8,594,000	50,995,000
March 1, 1890	44,362,000	5,079,000	49,441,000
March 1, 1889	44,683,000	3,536,000	48,219,000

The total of domestic and Canadian available wheat stocks March 1, 98,834,000 bushels, is about 12,000,000 bushels smaller than on March 1 one year ago, 7,000,000 bushels smaller than on March 1, 1894, and about 11,000,000 bushels less than on March 1, 1893, so that the existing wheat available is the smallest quantity held on March 1 for three years. Contrasted with stocks held on the like date in 1892, the increase is 30,000,000 bushels, and compared with those on the like date in 1891 47,000,000, nearly 100 per cent.

The total quantity of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantity afloat for Europe from all exporting countries, on March 1, added to available stocks in Europe, as reported exclusively to BRADSTREET'S, is as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
Mar. 1, 1896	94,538,000	4,296,000	55,208,000	154,042,000
Mar. 1, 1895	98,745,000	11,801,000	60,112,000	170,658,000
Mar. 1, 1894	96,246,000	9,622,000	78,248,000	184,116,000
Mar. 1, 1893	105,223,000	5,470,000	67,488,000	178,181,000
Mar. 1, 1892	64,666,000	3,341,000	77,608,000	145,615,000
Mar. 1, 1891	42,401,000	8,594,000	48,523,000	99,523,000
Mar. 1, 1890	44,362,000	5,079,000	46,400,000	95,841,000
Mar. 1, 1889	44,683,000	3,536,000	61,504,000	109,724,000

Late announcements that stocks of wheat afloat for and in Europe have been falling off sharply are abundantly confirmed by BRADSTREET'S cabled report that that aggregate was 55,208,000 bushels on March 1, the smallest quantity so held on March 1 since 1891, five years ago, when the total was 48,523,000 bushels. The falling off in European stocks and quantities afloat for Europe, compared with a year ago, is nearly 5,000,000 bushels; compared with March 1, 1894, it is about 23,000,000 bushels, compared with corresponding date in 1893 about 12,000,000 bushels, and with 1892 nearly 22,000,000 bushels. These decreases in available and afloat supplies for Europe correspond with a month's falling off in domestic and Canadian stocks today, as contrasted with one year ago, of 12,000,000 bushels, with two years ago 7,000,000 bushels, and with three years ago nearly 12,000,000 bushels, as previously explained.

It is evident the extraordinarily heavy falling off in supplies of wheat in January and February, 1895, has not been even approximated, the two months' decrease of a year ago, about 15,000,000 bushels, being in contrast with two months' decrease this year of only 3,200,000 bushels.

In view of this the change in the total of the world's supplies of available wheat during February, 1896, is not as marked as anticipated, and in this respect the month's summary of the world's wheat totals is less satisfactory to holders than anticipated.

During February, 1890, world's supplies of available wheat, which included those in the United States and Canada, both coasts, in Europe and afloat therefor from all exporting countries, fell off fully 10,000,000 bushels, and in February, 1891, 6,000,000 bushels, while in 1892 the world's decrease in wheat stocks in the corresponding month was also 10,000,000 bushels. By this time, however, the effects of one or two extraordinarily heavy wheat crops, particularly in the United States, had begun to make themselves felt, and in February, 1893, the world's available wheat did not decrease at all, but, on the contrary, it showed an increase of about 100,000 bushels. This was practically repeated in February, 1894, when the increase was about 180,000 bushels. But in February, 1895, as pointed out, heavy shrinkages in wheat stocks on this side of the Atlantic had a natural effect, and the world's total of available wheat declined 9,000,000 bushels, or nearly as much as in the corresponding month of 1892 and of 1890. Last month, however, the decrease in the world's available was only 6,000,000 bushels, for three-fourths of which the shrinkage of supplies in the United States and Canada was responsible, the remainder being the net February decrease in Europe and afloat therefor.

Total world's wheat stocks January 1, this year, nearly 170,000,000 bushels, were smaller than on corresponding dates in three years next preceding, which was true of the total for February 1, 160,000,000 bushels, and is repeated in the comparison for March 1, this year, with its 154,000,000 bushels. It is encouraging to point out that the January 1 total in 1896 was as small as the aggregate of the world's wheat on March 1, in 1895, and the February 1 total this year, 160,000,000 bushels, corresponds practically with the April 1 total for 1895. The aggregate of world's stocks on the 1st inst., 154,000,000 bushels, also duplicates the comparison made by that for January 1, this year, in that it is smaller than the corresponding total on May 1 a year ago.

COMPTROLLER ECKELS ON THE CURRENCY.

The government has usually been well served by the incumbents of the Comptrollership of the Currency, whose talents and acquirements have, as a rule, commanded in spheres of private activity a much more generous scale of compensation than is allowed them under the laws fixing government salaries. We do not recall any incumbent, however, who has joined with the other qualifications for the position of Comptroller so great a degree of skill and readiness as a public speaker on the questions which specially concern him as a representative of the government on its financial side. Mr. Eckels' addresses upon currency questions must indeed be reckoned among the most valuable influences exerted by the administration in its propaganda for sound money. His immediate audiences, as a rule, though sometimes few in number, have been fit in point of quality, and it should not be forgotten that the press multiplies a man's audience under modern conditions.

The Comptroller's latest address was delivered at the banquet of the Massachusetts Reform Club, at Boston, last week. In the course of his remarks he said that the government is striving to maintain the single gold standard of value and continue gold payments under conditions wholly unnatural and in defiance of all monetary laws and experience. Those charged with the responsibility of keeping untainted the nation's currency credit are, he said, denied powers commensurate with the difficulties with which they have to contend, and taunted with unfaithfulness to duty when they bring into use even the poor means at their command, and if thus far the government has succeeded in escaping financial disgrace it has done so at a tremendous cost and at the expense of every taxpayer in the land. It not only must bear the burden of Sherman silver notes and of a volume of depreciated silver which has been injected by legislative action into our monetary system, but, in addition, must labor under the load of the current redemption of Treasury issues which the mandatory provisions of law compelling reissues make it not only difficult to tell the number of, but render it well nigh impossible to keep a sufficient amount of gold reserve against. It is, he said, fruitless to discuss our ability to undertake the free coinage of legal tender silver and at the same time the maintenance of gold payments, for if the bill authorizing such coinage ever becomes a law, the basis of our currency and of our credit will be silver and silver alone. It cannot be, under such circumstances, gold and silver, for the facts of all monetary history bear ample proof of the impossibility of maintaining silver and gold coins of differing commercial values in concurrent circulation.

The cause of the weakened condition of the credit of American currency, Mr. Eckels declared, was to be found in the fact that from the issuance of the first Treasury note in 1862 to the present time the inflationist has been the controlling force in American monetary legislation. With the exception of the greenback retirement act, passed at the request of Secretary McCulloch, though quickly repealed, and the repeal of the purchasing clause of the Sherman silver enactment, our statute books are, he said, barren of any law the design of which has been other than to increase the volume of our circulating medium. The bulk of the

legislation proposed has had this end in view, while the legislation enacted has accomplished it, and, under such inspiration and the teachings of many in public places who have advocated it, we find large numbers everywhere denying both that the volume of the currency is of the least importance and that which makes for the public good is the confidence which it commands. He added:

It is the inflationist who, as the advocate of an irredeemable greenback, looks upon the fiat of the government and the operations of the printing press as the greatest wealth producing agencies in the land, and as the advocate of the free coinage of silver has no less faith in the results attained when that fiat is applied to the product of the silver mine at a fictitious ratio. He stands to-day the strenuous opponent of the single gold standard of value, and he ill conceals his attitude by taking refuge in his announced belief in the historically demonstrated impossibility and absurdity of bimetallism, whether it be national or international. He remonstrates against the retirement of the government Treasury paper because of the fear he professes to feel of a contraction of the currency, unmindful that these very issues are the controlling factors in calling forth bonds, diminishing incomes and restricting on other lines what Mr. Tilden aptly termed "the whole vaster volume of credit machinery."

The elimination of inflation doctrines is, therefore, in Mr. Eckel's view, the chief end to be striven for by the friends of sound money. Until the inflationist is dislodged there can be, in his view, no permanent cure for our financial ills. When the career of the inflationist is ended, he declares, the Treasury of the United States will cease carrying on the operations of a bank; its notes of issue will be paid and cancelled, and their baneful influence will be lifted from all the industries in the land, and there will then be none who for the people of the United States would have other than a single gold standard, and none who would suggest a dollar, whether of silver or paper, which is not everywhere under any and all circumstances and in whatever quantities fairly interchangeable with every other dollar which circulates without entailing loss to any one. When that day arrives Mr. Eckels may have the satisfaction of knowing that he did his full share in helping to bring it about.

THE PENNSYLVANIA'S REPORT.

The annual report of the Pennsylvania Railroad Company, which will be found in another column of this issue of BRADSTREET'S, deserves careful consideration for several reasons. It is needless to say that even the summary herewith presented is much fuller and conveys more meaning to the company's securityholders and to investors generally than the average railroad report, while its prompt appearance two months after the end of the calendar year, which is also the fiscal year of the corporation, is another excellent feature, one which cannot be too highly commended as an example for other railroad managements to follow. The most important consideration, however, is the effect at this juncture of such a generally favorable exhibition of the operations or results of one of the greatest concerns of its class. The report appears at a moment when the downfall of another trunk line is calculated not only to disturb foreign financial sentiment in regard to American securities, but to unsettle confidence at home as well. The peculiar value of such documents as the reports of the Pennsylvania and Chicago & Alton roads is to demonstrate that railroad companies in good credit, adequately financed, and managed with conservatism, can flourish even in the midst of "hard times."

The statement of earnings and expenses of the Pennsylvania for 1895 may with advantage be compared with the like results for 1894 and 1893. These figures, it should be observed, cover the operations of the three great divisions east of Pittsburgh and Erie, viz.: the Pennsylvania Railroad proper and its branches, the New Jersey lines and the Philadelphia & Erie property. The item, "other income," includes receipts from the bonds and stocks of other companies over which the Pennsylvania exercises control. The statement is as follows:

	1895.	1894.	1893.
Gross earnings	$64,627,178	$58,704,284	$66,375,223
Operating expenses	44,510,656	40,363,746	46,996,017
Net earnings	$20,116,522	$18,340,538	$19,379,206
Other income	5,063,460	5,513,195	6,036,941
Total income	$25,179,982	$23,853,733	$25,416,147
Rentals and interest	14,649,550	14,383,614	15,299,712
Balance	$10,530,432	$9,470,119	$10,116,435
Sinking Fund, etc	1,895,962	2,110,372	2,804,819
Balance	$8,634,469	$7,359,747	$7,311,616
5 per cent. dividends	6,405,011	6,464,647	6,400,507
Balance	$2,169,458	$895,099	$911,109
Old accounts settled	....	....	1,640,673
Total			$2,551,782
Two pr ct. scrip divid'd.	....	....	2,535,490
Balance	....	....	$16,292
Accounts written off	1,771,621	4,217,620	....
Total surplus	$23,553,469	$23,155,632	$26,478,152

The accounts written off in 1895 include interest accrued but not due (less other income), $826,537, and amount charged off for sundry accounts, depreciation of securities, etc., $945,083.

Including the western lines the results for the year of the entire Pennsylvania system were as follows:

	1895.	1894.	1893.
Gross earnings	$132,720,811	$122,003,000	$135,059,787
Operating expenses	92,859,286	85,142,174	95,491,559
Net earnings	$39,861,525	$36,860,825	$39,568,228

The net profit on all lines west of Pittsburgh for the year just ended was $1,987,366, there being a profit of $2,209,950 on the western roads of the system operated directly through the organization of the Pennsylvania Company and the Pittsburgh, Cincinnati, Chicago & St. Louis Railway, while the portion of the western lines operated through their own organizations made a loss for $222,084 of which the Pennsylvania Railroad was responsible. In reference to the increases shown by the western lines the report states that certain portions of them were greatly benefited by the prosperous condition of the iron industry, making their tonnage and mileage the largest of any year in their history. The total number of tons of freight moved (on the entire system) was 160,000,000, against 120,000,000 in 1894 and 135,500,000 in 1893, while the aggregate of passengers was 75,000,000, against 77,000,000 in 1894 and 85,000,000 in 1893. The only other comment on the situation which the report embodies is the laconic statement that in view of the fact that the low rates prevailing on both passenger and freight traffic continued during 1896, it would appear that under any reasonable conditions the property would make fair returns to its shareholders.

There is also an absence of any extended remarks on the general railroad situation. The following, however, in regard to the new Joint Traffic Association is of interest. President Roberts says:

"The continued unsatisfactory condition of the transportation interests of the country has been fully recognized, not only by those having the management thereof, but by the general public. After careful consideration of the entire subject, an organization known as the Joint Traffic Association has been formed, in the belief that through its instrumentality not only could substantial economies be enforced in the administration of the service, but stability and uniformity of rates secured to the public, and the violent fluctuations prevented which tend alike to disturbance of values and unjust discrimination. While sufficient time has not elapsed to thoroughly test its working, yet enough has been accomplished in the correction of evils to demonstrate its value, not only to the railroads but to the public, and to justify the belief that to it, or some like organization, the Interstate Commerce Commission must look for the potent agency to enable it to enforce the provisions and secure the results sought to be accomplished by the passage of the Interstate Commerce act."

LEGAL RELATIONS OF THE PACIFIC ROADS.

In response to a resolution lately adopted by the House Committee on Pacific Railroads Attorney-General Harmon has sent a letter in which he replies categorically to certain questions asked by the House Committee. These answers of the chief law officer of the government are of special interest in view of the consideration at present being given by the committee to the situation of the roads. The first question asked by the committee was whether the officers and directors of the bond-aided Pacific railroads incurred any liability to the United States by the unlawful issue of the stock of said companies. The Attorney-General replied to this question that if the officers and directors of any company knowingly made or permitted any unlawful issue of stock thereof, they became personally liable to the company, or to its lawful stockholders, but not to the United States, which was merely a creditor, and that the rights of creditors could not be affected by the improper issue of stock, which merely represented the property of the company, but did not dispose of or encumber it.

The next question asked by the committee was whether the officers and directors incurred any liability to their respective companies or to the United States for profits on contracts made with themselves, or persons representing them, for the construction of the railroads. To this question the Attorney-General replied that if the officers and directors made contracts with themselves or with persons representing them, to their own profit or the detriment of the company, they became liable to it, unless such contracts were knowingly authorized or ratified by a majority of the directors having no interest therein, or by the stockholders, but that they did not become liable to the United States. Another question asked was as to whether the United States, as a creditor of the corporations, could maintain actions in their own name against said parties for the enforcement of such liability, if it existed, until all remedies to enforce payment of the debts owing by the companies to the United States had been exhausted. In reply the Attorney-General recalls the fact that it was held, in the case of the United States vs. The Union Pacific Railway Company, known as the "Credit Mobilier" case, that such liability was to the respective companies only, and that the United States, therefore, could not maintain any action thereon against the guilty parties, but could assert the rights of the company by a proper suit in equity as a creditor, and would not be bound first to exhaust other remedies if a showing were made of probable loss by delay.

The point was further raised whether, if such liability existed, the United States would be barred in any action which might be brought for the enforcement thereof by the statutes of limitation, which would bar the companies if the actions were brought in their name and behalf, or, in other words, whether the United States would be entitled to maintain actions as creditor of said corporations against its directors and officers which the corporations themselves could not maintain. To this question the Attorney-General returned the answer that inasmuch as the United States would be merely asserting the rights of the companies as assets to be applied to the payment of their creditors, any statute of limitations which would bar the companies would also bar the United States.

Finally, the committee asked the Attorney-General whether the facts found and stated by the Pacific Railroad Commissioners of 1887 in their report to the President were supported by evidence legally admissible in a court of justice. To this question Mr. Harmon replied that if the committee meant by its question to ask whether any evidence before the Pacific Railroad Commissioners, upon which they found the facts stated in their report, would be admissible in a suit or action between the parties in a court, he would answer generally that the statements made by any witness would be admissible against him, but not against any other person, and that original documents would be admissible, or copies under the usual rules relating to secondary evidence, and that with these exceptions the evidence would not be admissible. The Attorney-General, however, said that he did not understand the question as asking for his opinion whether if the commissioners had applied legal rules of evidence the testimony should have been admitted, and as to that point he expressed no opinion.

BRITISH INVESTMENT FUNDS AND INVESTMENTS.

Among the items of interest in the European financial situation none is probably of more real importance than the fact that British consols sold last month in the London market at the highest price on record, namely, 109 for the 2¾ per cents, which in 1903 are to be reduced to 2½ per cent. At the quotation given above the return in income to the investor is only £2 7s. on the £100, indicating the extremes to which British capital is forced in order to obtain absolutely safe employment.

The same factor—the enormous accumulation of idle funds—which has produced this result in connection with consols is now also at work in what the London market terms "home" investments—English and Scotch railway shares and debentures, and the like.

Commenting on this situation, the London *Financial News* says editorially in its issue of February 18: "It seems highly probable that in a few years consols will be valued on a two per cent. basis. While, to some extent, we may be proud of the apparent advance in the national credit, it is a mistake to suppose that the price of consols is a trustworthy test. If the quotations of government securities were the real criterion of credit we should hardly see a similar improvement in French and German rentes notwithstanding that the indebtedness of both countries is growing at an uncomfortably rapid rate. The reason of the rise in government bonds almost all over the world—that is, among those nations which have not openly defaulted or given evidence of bad faith—is the ever increasing demand

for fairly safe securities, which must continue to grow as the accumulated wealth of the world increases. In our own country (England) there is an additional reason for the advance in consols, because the demand is automatically augmented year by year on account of the savings banks, while the supply is steadily diminished by the operations of the sinking funds. Unless the scope of investment should be enlarged, it is obvious that the funds of the Post Office Savings Bank will soon drive consols to a still more extraordinary price than that at which they stand now, provided that conditions are not changed by a war or any other event which would involve England in a heavy outlay. But, leaving consols out of the question, the lower rate of interest now obtainable in all gilt-edged securities is clear proof that demand has so far exceeded supply that investors have educated themselves to be content with a smaller return than that which was considered the irreducible minimum not many years ago."

Not so long ago a leading British financial authority declared that it was dangerous to buy consuls at 102. Now the same journal, from which the above is an extract, observes it seems dangerous to sell them at 109. The paper in question goes on to say: "The difficulty in employing money profitably in the discount market, together with the low bank rate, of course, explain partly the rise in consols. Unless any change should be made by the directors on Thursday—of which there seems not the least likelihood—the Bank of England's official minimum will have stood at 2 per cent. for two years without alteration—a longer period than has ever been known since the Bank act was passed in 1844. But even this figure does not represent the real value of money during the period which has elapsed since the rate was reduced to 2 per cent. on February 22, 1894. Hardly at any moment has the open market rate for three months' bills approached 1½ per cent., and that in spite of many occurrences which tended to raise the value of money, at least temporarily. A year ago, for example, the issue of part of the United States loan in Europe led to the expectation that large quantities of gold would be shipped to New York. But our supplies of bullion were replenished from other quarters to such a degree that the market hardly felt the influence of the comparatively moderate drain of gold to the United States. Since then the South African boom gave rise to considerable demands for accommodation, but without much effect on the market. When the boom began to reach dimensions inconsistent with safety some of the banks diminished the advances made by them to the Stock Exchange, and so helped to precipitate the collapse. The trouble which followed in some continental centers reacted to a slight extent on the London money market, but rates did not stiffen much. But it is needless to dwell on the fact that outside rates for money have been almost as consistently low during the past two years as the bank rate has been."

Hence, the London market has seen a rise in the debenture and preference stocks of British railways parallel to that in consols, until the former class of obligation yield little if anything more than the consols do. Consequently more attention has been given to the ordinary shares of home railways, and at the present London & Northwestern's common stock, which in 1895 paid 6⅜ per cent. dividends, sold at 187⅜ in last September, against 185½ in 1890, when the dividends on the stock amounted to 7¼ per cent. Other examples might be cited showing that the English investors have to be satisfied with no more than 3 per cent. from home investments.

These facts are valuable as explaining the marked tendency of London financial circles to take a more active interest in American securities. That this disposition exists cannot be denied. Moreover, it has survived both the Cuban war scare and the Baltimore & Ohio receivership, and shows its effects in a steady adoption of our better class of railroad bonds by foreign buyers.

A HEAVY DECREASE IN CIRCULATION.

A very marked net decrease in the volume of money in circulation, coupled with a great increase in the Treasury holdings of money and bullion, constitutes the feature of the Treasury statistics of circulation just issued. The most marked item of decrease in circulation was that of gold coin, where the falling off, as compared with February 1, amounted to $53,969,095. The other decreases comprised $1,113,735 in standard silver dollars, $643,074 in subsidiary silver, $6,114,830 in gold certificates, $4,146,635 in Treasury notes of 1890 and $5,287,267 in United States notes. The increases comprised $931,604 in silver certificates, $3,900,000 in currency certificates and $5,464,482 in national bank notes. The total net decrease in circulation for the month was $60,978,550.

Turning now to the figures showing the changes in money and bullion in the Treasury, we find a net increase of no less than $76,896,073. Only two items of decrease are shown in this branch of the statement, namely, $1,779,112 in national bank notes and $1,403,843 in silver bullion. The increases comprise $56,649,096 in gold coin, $2,613,735 in standard silver dollars, $633,749 in subsidiary silver, $3,541,635 in Treasury notes of 1890, $5,287,267 in United States notes, and $11,353,546 in gold bullion. The gold coin held by the Treasury on March 1 amounted to $140,874,515.

The total amount of money in circulation amounted on March 1 to $1,528,742,057, which represents a decrease of nearly $45,800,000 as compared with the corresponding date of last year. The money was distributed as shown in the following table, which gives in addition the total amount coined or issued and the amount in the Treasury:

	General stock coined or issued.	*In Treasury.*	*Amount in circulation March 1, 1896.*
Gold coin	$586,168,106	$140,874,515	$445,293,591
Standard silver dollars.	424,789,629	369,273,688	55,515,941
Subsidiary silver	78,564,547	14,820,486	63,744,061
Gold certificates	44,384,489	651,470	43,733,019
Silver certificates	344,377,504	11,831,561	332,545,943
Treas'y notes, act July 14, 1860	136,719,280	30,644,730	106,074,550
United States notes	346,681,016	106,222,443	240,458,573
Cur'y cert'f's, act June 8, 1872	33,070,000	245,000	32,825,000
National bank notes	217,181,917	8,630,538	208,551,379
Totals	$2,211,936,488	$683,194,431	$1,528,742,057

The increases, as compared with March 1 a year ago, comprise not quite $900,000 in standard silver dollars, over $2,800,000 in subsidiary silver, over $6,700,000 in silver certificates, and over $8,600,000 in national bank notes. The decreases include over $23,200,000 in gold coin, over $7,700,000 in gold certificates, over $8,100,000 in Treasury notes of 1890, over $21,500,000 in United States notes, and over $4,100,000 in currency certificates. The circulation per capita amounted, on March 1, to $21.59, according to the calculation of the Treasury experts. This represents a decrease of 88 cents for the month, and of $1.10 as compared with the corresponding date a year ago.

ANOTHER TRUNK LINE RECEIVERSHIP.

The appointment of receivers for the Baltimore & Ohio Railroad Company on the 29th ult. will scarcely rank as a surprise. Such a result had been accurately foreshadowed by the heavy decline in the common stock of the company since the beginning of the year. Early in 1895 it sold as high as 60¾, but before January 1 last the market quotation had touched 32½. Notwithstanding the change of management and the quasi-assurances given that the new blood infused into the directory was an indication of financial assistance to be obtained in New York and London, the decline continued with a steadiness which Wall street had no difficulty in interpreting with sufficient accuracy. The decline to almost 20 in the price during the last few days preceding the application to the courts was, indeed, significant. Little doubt could exist that the financial straits of the corporation were severe, and that the efforts to maintain its solvency were in all probability futile. A variety of disquieting rumors were also circulated about the condition of the concern as revealed by an expert examination made at the instance of the financiers who were expected to come to the rescue and provide funds for immediate necessities against an issue of collateral trust notes. It was known beforehand that this help had finally been refused, and the appointment of Messrs. John K. Cowen and O. G. Murray, president and first vice-president respectively, as receivers was the natural sequence. The formal announcement made in this connection was that the company was unable to meet its interest obligations maturing on March 1, and a judgment confessed in favor of one of the creditors was the immediate basis for the application to the courts. On this the stock declined to 17, rallying slightly after the first rush of liquidation and bear selling had spent its force. A committee in which the New York members of the board predominate was at once named to act with reference to a reorganization, while the receivers named in the first instance have been promptly confirmed by the United States courts in the various states to which the lines of the company extend.

It is somewhat early to speak with confidence of the immediate causes which led to this result. One of the most disturbing features of the case is the reticence displayed as to the character of the report made by Mr. Little, the expert accountant employed by the banking syndicate, and on which their refusal to advance the needed funds was based. The common report has been that the condition of affairs revealed parallels the sensational developments unfolded by the same gentleman's famous exposé of the doings of the old Atchison management. This has been denied, and it was stated that Mr. Little confirms the representations made by the management to the syndicate, and that its bookkeeping has been correct throughout. At the same time it is urged that as the expert made the examination for the syndicate alone, it is not a matter for public scrutiny. In the absence of information it is easy for the most disturbing reports to find circulation, and various insinuations have been put afloat, among others that a large part of the equipment was unserviceable, that the floating debt was nearly $20,000,000, that treasury assets had been secretly disposed of by the old management in its straits, and that various improper items had been included in the earnings with a view to swelling them and thus producing a favorable impression. The only well-ascertained fact in this connection is that the Little report settled the question of obtaining financial aid from his employers. Its suppression now may be necessary, but is, nevertheless, unfortunate. It will render the public sceptical about the statements of the management and the reorganization committee.

Another feature of the case is the bad effect on European financial interests. A considerable portion of the Baltimore & Ohio debt is held abroad. Such an event, coming when London had been led to believe that better times for American railroad securities had dawned, could not fail to impart a chill to the newly-formed enthusiasm for our railroad bonds. That it has done so is not a matter of doubt.

MANCHESTER CANAL FIGURES.

The report of the Manchester Ship Canal for the half year ending December 31, 1895, leaves it still in doubt whether Lancashire's quiet manufacturing center has benefited itself or not by its prodigious and expensive effort to free itself from dependence on Liverpool for water carriage by sea of raw materials and finished products. It seems that the tonnage which makes use of the canal is increasing. In the last six months of 1895 the amount on which tolls were paid was 758,000 tons, against 555,000 tons in the similar period of 1894. For the full years in question the total tonnage of 1895 was 1,358,000 tons, against 925,000 tons in 1894.

Leaving aside the financial results—which are certainly not encouraging—it would seem that the results of building the canal are not what was anticipated. In spite of the most vigorous efforts to procure traffic for the canal, it has not yet made Manchester a seaport. It has been pointed out by the management of the company that the traders and manufacturers of the district can not only effect great savings directly by making full use of it, but that, "as a matter of policy, they would do well to support the canal even when the older rival routes are for the time being offering equal advantages." It is one of the aims of Manchester to force the railroads to put the city upon the same footing as other sea ports in regard to rates. This the railroad companies thus far refuse to do. They carry goods from Liverpool to London at low rates in order to prevent the traffic from going by sea. But they do not for the present show any readiness to class Manchester with Liverpool in this respect. Nor is it likely that this object will be gained till the traffic of the canal reaches proportions indicating that it is becoming a dangerous competitor to the railroads for the coastwise carriage of freight.

Of course, the earnings of the canal are as yet inadequate to meet its charges. The city of Manchester has again to go without interest on its £5,000,000 of debentures, representing the amount borrowed for the completion of the canal on its credit at 3 per cent. and virtually loaned to the canal at 4½ per cent. The gross earnings of the canal for the half year were £74,400, an increase of £20,800 over the same six months of 1894; but, on the other hand, the net receipts were only £15,100, against

£10,900 in 1894. This is due to an increase of £17,000 in the operating expenses, or, rather, the cost of maintenance, which now has to be paid out of earnings instead of being, as in the past, charged to capital account. Receipts from the Bridgewater Canal, which the Ship Canal Company controls, amounted to £25,000, making the total net for the half year £40,100, but as the fixed charges on the debentures amount to £160,000, the deficit is a serious one. The city of Manchester last July deferred its claim for half yearly interest, but this is a process that cannot be repeated indefinitely, and the growth of the canal's business is too slow for any sanguine hopes that it can work out of its difficulties very soon.

PRESENT AND FUTURE OF AFRICA'S COMMERCE.

In view of recent events in Africa an article in the London *Times* on the commercial value of that grand division deserves more than ordinary attention. It points out that central or tropical Africa, extending from the Zambesi river at the south (which empties into the Mozambique Channel on the east coast) to the bend of the Niger (in northwestern Africa, in what was formerly called the Soudan), or from about 18° south to 18° north latitude, covers roughly about 7,000,000 square miles, is double the size of Europe, or of Canada, or of Australia. This excludes, in addition to the northern half of the great Sahara Desert, all the countries bordering on the Mediterranean, the southwest coast German possessions, the southern portion of the British protectorate, the Matabele, Transvaal Republic, the Orange Free State, the southern portion of the east coast Portuguese possessions, Zululand, Natal, Basutoland, Bechuanaland and Cape Colony. The *Times* ingenuously states that England's share of the "spoil" in central Africa may be roughly estimated at 2,000,000 square miles, and estimates the value of the trade of this enormous area approximately as follows, divided almost equally between exports and imports:

West African Colonies	£4,000,000
Niger Territories	950,000
Niger Coast Protectorate	1,750,000
British Central Africa	85,000
British East Africa	180,000
Zanzibar	2,000,000
Somaliland	470,000
Total	£9,435,000

Its relative importance may be better understood when it is known to be less than the total foreign trade of Ceylon, and about £5,000,000 less than the value of the exports from Cape Colony alone.

The total area of French Central Africa, as claimed, excluding the bulk of the Sahara, the Mediterranean states and Madagascar, which would alone add 1,500,000 square miles, but including Senegal, the Ivory coast, Dahomey, Congo and Gaboon, is placed at about 1,000,000 square miles, and foreign trade statistics are given as follows:

Senegal	£1,250,000
Ivory coast	230,000
Dahomey	770,000
Congo and Gaboon	200,000
Total	£2,450,000

It should need no explanation that the bulk of the trade of British Africa is with the United Kingdom, but that fact is in contrast with the statement that about one-half the trade of French tropical Africa is with other countries than France, the imports into that portion of Africa from France alone being smaller in volume than from other quarters.

Notwithstanding the fact that Germany has been at work in Africa for a little more than ten years, it has secured a total area, excluding its southwest coast African possessions, of about 550,000 square miles, the total value of the foreign trade of which annually is placed at £1,490,000, a favorable result when compared with those achieved by either the British or the French on the dark continent. Germany, like France, however, does the smaller portion of the foreign trade of its African colonies. Portugal, the oldest European power in Africa, controls 750,000 square miles of territory, the annual foreign trade of which is valued at £2,283,000, almost equally divided between exports and imports. It is added that Italian Africa's foreign trade amounts to about £500,000 a year, and that the exports and imports of Congo Free State amount to about £700,000 annually, the area of that region being about 1,000,000 square miles.

Statistics on these points as given by the *Times* are collected as follows:

	Total exports.	*Total imports.*	*Grand total.*
British sphere	£4,720,000	£4,715,000	£9,435,000
French sphere	1,050,000	1,400,000	2,450,000
German sphere	710,000	780,000	1,490,000
Portuguese sphere	1,061,000	1,222,000	2,283,000
Italian sphere	....	....	500,000
Congo Free State	300,000	400,000	700,000
Liberia	....	....	500,000
Totals	£7,841,000	£8,517,000	£17,358,000

In view of the foregoing it is a somewhat startling fact that, inclusive of officials, missionaries, traders and others, the total white population of central Africa, as outlined, does not exceed 6,000, and that of the total exports thence all but an insignificant portion are the products of the jungle, palm oil, palm kernels, ground nuts, ivory, caoutchouc, gums and similar articles, the supply of which is abundant, but the demand limited. The *Times* proceeds at some length to point out the capabilities of central Africa as a coffee producer, as a place for the cultivation of cotton, sugar, tea, tobacco, cereals of all kinds, and of cattle. Naturally, it concludes that in order to reach its limits in this direction an adequate white population is necessary, and there is declared to be no doubt that instead of 6,000 one hundred times that number of Europeans "could manage to lead a healthy and vigorous life in South Africa."

South of the Zambesi there is an area of some 1,300,000 square miles, including German southwest coast possessions, where public interest throughout Europe and America has centered of late. The white population in that portion of the continent is about 800,000 and rapidly increasing. The total commerce is estimated to be worth £35,000,000 annually, almost equally divided between exports and imports, the bulk of it belonging to Cape Colony, of course, the share of Natal alone being about £4,500,000 and of the Orange Free State probably £3,000,000.

There are no returns for exports from the South African Republic, while imports on which duty is paid are valued officially at about £5,000,000. In case of both of the Boer states the trade returns are stated to be included, to a large extent, in those of the Cape and Natal. The gold output of the Transvaal approaches £8,000,000, and about £7,000,000 of this is included in the exports of Cape Colony. For German southwest Africa it is difficult to estimate the value of the trade, as so much is carried on by the land frontier, but it is doubtful if it exceeds £70,000. At present, of course, the trade of the British South Africa Company's territories is insignificant, as is also that of Bechuanaland. The area over which the trade of south Africa is spread is not more than one-seventh of the total area of central Africa. At present gold and diamonds form in value a large proportion of the exports. The new region is attracting a numerous and vigorous population, as was the case in Australia and California, in both of which gold gave way to produce of more permanent importance.

In north Africa the people are in a fairly high scale of civilization, "industrious tillers of the soil, rearers of cattle, skilled in manufactures of a simple kind, keen traders, and with many wants which Europe can supply." The total population of the north African states is somewhere about 17,000,000, and of this probably not more than 400,000 can be called "white." The combined trade of Egypt, Tripoli, Tunis, Algeria and Morocco amounts to about £46,000,000 annually, fairly divided between imports and exports, and the total area is 1,250,000 square miles, the same as south Africa. Of this, however, a large portion is unproductive.

In Egypt alone, with an area of only 400,000 square miles, all the produce is yielded on only about 13,000. In the other states there are great desert tracts, and of the total commerce of north Africa Egypt claims about one-half and Algeria about £20,000,000.

The total annual value of the commerce of Africa is put at £100,000,000, "a miserable yield for 11,000,000 square miles." South America alone carries on a commerce valued at £160,000,000 for an area of 7,000,000 square miles, and even there much of the continent has only been scratched. "What can be made of a tropical country with large desert areas, but with a teeming, industrious native population under the guidance of Europeans, with a network of railways, with extended systems of irrigation, a stable government, and other advantages lacking in Africa, may be seen in the case of India, the commerce of which is more valuable than that of all Africa, though the total area is only 1,500,000 square miles. But in this area lives and works a population double that of the whole of Africa."

But it is concluded that, while to within the past few years Africa has hardly been needed by the rest of the world except as a slave market, "her turn has come, and the need for her coöperation in the general economy of the world will become greater and greater as population increases, as industry expands, as commerce develops, as states grow ambitious and as civilization spreads."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

Stocks of wheat in private elevators at St. Louis on March 1 were 736,000 bushels, against 865,000 bushels on February 1, a decrease during February of 129,000 bushels.

CURRENT BUSINESS NEWS.

Industrial.

A dispatch from Greenville, N. H., says that beginning on Monday the hours of labor in several cotton mills, employing 600 hands, will be reduced from 40 to 30 per week, because of the small demand for goods. These mills have been running full time since September, 1894.

Several woolen mills near Springfield, Mass., will reduce their running time one-half, beginning next Monday. This will affect about 1,700 people. The cause for the reduction in time is dull trade.

The articles of incorporation of the Southern States Exposition Company, which is to manage the local end of the exposition of southern resources and manufactures in Chicago next fall, were filed in Springfield, Ill., Tuesday.

The total number of garment workers now on strike in Baltimore is estimated at over 6,000.

A Manchester, N. H., dispatch, March 3, says "it is officially announced to-day that the mills of the Amoskeag Corporation will be closed for two months, except the Jefferson mill, which will be stopped for only one month. The damage done by the floods makes this cessation of operations necessary. More than 10,000 operatives are affected.

A distinct improvement has taken place in the statistical position of copper at London since February 1. Then the visible stock there amounted to 46,128 tons; but later deliveries were 7,275 tons, against arrivals of only 5,063 tons, with the result that the stock fell 2,212 tons, to 43,916 tons, a figure lower than reported "at any time in the last three years." The deliveries for consumption were "50 per cent. greater than those of the first fortnight of January, and this access of demand" while the supplies remained practically stationary had an effect on the price of the metal, which was still well below the figure touched when the copper market was active a few months ago.

Southern textile mills are running to full capacity, but there are complaints of low prices and a smaller demand, especially for unbleached goods. "New mills," says the Chattanooga *Tradesman*, "continue to be organized in considerable numbers."

Commercial.

In 1889 a total of $38,500,000 was paid in the United States for fertilizers used in producing crops in that year. The south Atlantic and some of the older middle states are the greatest consumers, Georgia leading with $5,724,000.

Rafting logs across Lake Huron to manufacturers in Michigan "goes on increasing. Last year the amount brought over to the mills at Saginaw, Bay City, Tawas, Alpena, Detroit and Cheboygan reached a total of nearly 280,000,000 feet. The estimate for this year is placed at 300,000,000 feet."

The Chattanooga *Tradesman* reports that the improvement in the weather is having a good effect, and that business is more active. "The reports as to an increased acreage of cotton seem to be confirmed, and it is now probable that the crop will be one of the largest on record."

"Sixty dollars worth of fertilizers spread on every farm in the state in one season is a big outlay," says the *American Agriculturist*, "even in these days of progressive and intensive farming. Yet that is just what Maryland and New Jersey are doing, while many other states pay out enormous sums, even though less per farm than this. In some sections about 10 per cent. of the total value of farm products in a given year goes back into the ground in fertilizers."

There is an increasing demand for lumber at the south, "particularly for export. The indications are that there will be heavy shipments to northern and eastern points."

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending February 28, 1896:

	1896.	1895.
Dry goods	$3,935,205	$3,807,914
General merchandise	8,615,976	8,212,950
Tota's for the week	$12,551,181	$12,020,864
Previously reported	80,968,841	78,095,511
Since January 1	$93,520,022	$90,116,375

The exports (exclusive of specie) from New York to foreign ports for the week ending March 3 were $1,077,396 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,022,957	$7,460,379
Previously reported	61,650,263	54,516,899
Since January 1	$68,673,220	$61,977,238

Sweden is said to be "our competitor in the lumber business, having immense forest areas. She makes lumber principally, though pulp wood is an important use for her timber. Great Britain is Sweden's largest customer for lumber, though France takes half as much and Germany one-quarter as much."

Financial.

The following securities were sold at auction this week at New York:

100 Shares Follmer, Clogg & Co. debenture stock, $100 each	75%
1 Share Blooming Grove Park Association, $450 (dues paid to April 1, 1896)	$35
25 Shares Lawyers' Title Insurance Co., $100 each	150½%
$8,000 Staten Island Rapid Transit Railway Company income 6 per cent. bonds	47⅞%
25 shares Kings County Bank of Brooklyn, $100 each	113
23 shares Union Ferry Company, $100 each	69½
$1,000 Brooklyn City 6 per cent. permanent water loan bond, registered, due July 1, 1896	100
$150,000 Kings County Hygiene Ice Company of New York first mortgage 6 per cent. gold bonds, due June 15, 1922 (hypothecated)	$35,500
20 shares Rutgers Fire Insurance Company, $25 each	119
20 shares Empire City Fire Insurance Company, $100 each	81
25 shares Commonwealth Insurance Company, $25 each	86
50 shares Merchants' National Bank, $50 each	134⅛
30 shares Brooklyn City Safe Deposit Company, $100 each	210
25 shares Holland Trust Company (in liquidation), $100 each	80
30 shares Title Guarantee and Trust Company, $100 each	245@248
10 shares Hide and Leather Bank, $100 each	88
40 shares Broadway Insurance Company, $25 each	112
50 shares Celluloid Company (hypothecated), $100 each	64½
10 shares Atlantic Trust Company, $100 each	1F0
100 shares Manhattan Trust Company, $30 each	140½
$2,000 Newark (N. Y.) Water Works Company 6 per cent. gold bonds, due 1907	$200 lot
$3,000 Rochester (Minn.) Water Works Company 6 per cent. gold bonds, due 1907	$100 lot
$1,000 Spartansburg (S. C.) Water Works Company 6 per cent. gold bonds, due 1908	$100 lot
25 shares Holyoke Paper Company of Holyoke, Mass. (hypothecated), $100 each	100
18 shares Market and Fulton National Bank, $100 each	221
10 shares Hamilton National Bank of New York, $100 each	102¼
$200,000 Detroit, Mackinac and Marquette Railroad Company land grant bonds	17½@18½
200 shares American District Telegraph Company, $100 each	35
49 shares North Carolina Lumber Company, $100 each	75
50 shares Retsof Mining Company, $100 each	50
$1,000 Retsof Mining Company first mortgage bond	75
$750 Retsof Mining Company first mortgage bond scrip	75

Nearly 300 prominent Democrats, representing the sound money faction of the party in Missouri, met in St. Louis last Saturday and adopted a lengthy report denouncing the attempt of the free silver advocates to commit the Democratic party in Missouri and other states to the free and unlimited coinage of silver at the ratio of 16 to 1 of gold, regardless of the commercial value of the two metals, and regardless of the action of the other commercial nations of the world.

Railroads.

The following roads report gross earnings for the month of February:

	1896.	1895.	1894.
Baltimore & Ohio S. W.	$478,003	$485,011	$504,052
Canadian Pacific	1,324,000	992,000	1,154,252
Chicago & Eastern Illinois	314,200	284,300	286,617
Denver & Rio Grande	502,300	486,700	475,000
International & Gt. Northern	249,188	240,549	214,912
Iowa Central	165,157	121,476	151,051
Mexican Central	775,445	689,411	681,516
Mobile & Ohio	290,019	231,003	256,737
Ohio Southern	62,711	58,246	54,776
Rock Island	1,117,550	1,185,441	1,234,787
St. Paul	2,305,680	1,927,522	2,106,785
Alabama Great Southern	100,091	108,010	----
Chesapeake & Ohio	776,683	646,948	666,377
Cleve., Lorain & Wheeling	92,650	79,691	58,948
Kan. City, Pittsburgh & Gulf	51,361	38,339	23,928
Lake Erie & Western	264,184	262,070	237,047
Louisville, Evans. & St. L.	117,183	101,119	110,044
Louisville & Nashville	1,595,895	1,364,940	1,481,127
Mexican National	357,459	322,331	315,343
Norfolk & Western	829,505	651,632	607,544
Ohio River	65,158	46,773	43,495
Peoria, Decatur & Evansville	65,417	71,408	64,492
Pittsburgh & Western	160,952	156,684	124,565
Pitts., Shenandoah & L. E.	41,384	33,685	21,248
St. Louis Southwestern	427,000	392,600	338,180
Southern Railway	1,467,574	1,261,908	1,448,464
Texas & Pacific	516,625	489,628	462,393
Wheeling & Lake Erie	83,690	99,727	85,217

The Norfolk & Western Railroad Company reports for January:

	1896.	1895.	Changes.
Gross earnings	$975,582.73	$822,198.86	Inc. $153,383.87
Expenses, includ'g taxes.	741,651.13	734,023.02	Inc. 7,628.11
Net earnings	$233,931.60	$88,175.84	Inc. $145,755.76

The Pennsylvania Railroad reports for January:

	1896.	1895.	Changes.
Gross	$4,993,771	$4,678,271	Inc. $315,500
Operating expenses	3,949,974	3,696,874	Inc. 253,100
Net	$1,043,797	$981,397	Inc. $62,400

Gross of western lines in January increased $225,100, and net increased $6,300.

The Wabash Railway reports for January:

	1896.	1895.	Changes.
Gross	$976,806	$905,996	Inc. $70,810
Operating expenses	734,151	709,498	Inc. 24,653
Net	$242,655	$196,498	Inc. $46,157

The following statistics concerning Texas railroads are taken from the annual report of the Texas Railroad Commission for year ended June 30, 1895:

	1895.	1894.	Increase.
Number of roads	59	58	1
Miles of road	9,290	9,141	149
Freight, tons	15,591,262	13,285,477	2,305,785
Passengers carried	6,537,250	6,229,150	308,100
Gross earnings	$39,387,869	$34,197,221	$5,190,647
Operating expenses	28,864,993	27,008,926	1,856,067
Net earnings	10,522,875	7,188,295	3,334,580

The all-rail eastbound shipments of dead freight from Chicago last week were 90,372 tons, against 57,692 tons the previous week, and 58,768 tons the corresponding week of the previous year.

The Chicago & Eastern Illinois Railroad Company has declared a quarterly dividend of 1½ per cent. on its preferred stock, payable April 1.

The Chicago, Burlington & Quincy Railroad, including the Chicago, Burlington & Northern Railroad, reports gross earnings for January of $2,593,604, an increase of $218,773 as compared with the same month of last year, and net $793,325, an increase of $80,859. Fixed charges were $880,000, leaving a deficit of $86,675, a decrease of $73,813.

The Louisville & Nashville Railroad reports gross earnings for January of $1,688,537, an increase of $86,435 as compared with the same month of last year, and net $622,055, an increase of $2,164. For the seven months ending January 31 the gross earnings were $12,408,619, an increase of $619,639 as compared with the corresponding period of last year, and net $4,506,497, a decrease of $191,177.

The Mexican National Railroad reports gross earnings for December of $445,432, an increase of $17,210 as compared with the same month of the previous year, and net $85,197, an increase of $25,305. For the year ending December 31 the gross earnings were $4,513,205, an increase of $184,127 as compared with the corresponding period of the previous year, and net $1,064,947, an increase of $164,026.

The New York, Susquehanna & Western Railroad reports gross earnings for January of $178,495, a decrease of $22,362 as compared with the same month of last year, and net $75,764, a decrease of $6,599. For the seven months ending January 31 the gross earnings were $1,366,920, an increase of $92,798 as compared with the corresponding period of last year, and net $587,849, an increase of $146,788.

The Atchison, Topeka & Santa Fé Railroad reports for the seven months ending January 31 gross earnings of $17,859,750, an increase of $544,602 as compared with the corresponding period of last year, and net $4,274,876, a decrease of $120,879.

The Cleveland, Cincinnati, Chicago & St. Louis Railroad Company has declared a quarterly dividend of 1¼ per cent. on its preferred stock, payable April 1.

The New York and Harlem Railroad Company has declared a dividend of 3 per cent. on its preferred stock, payable April 1.

The North Shore Traction Company has declared a semi-annual dividend of 3 per cent. on its preferred stock, payable April 1.

The Denver & Rio Grande Railroad reports gross earnings for January of $569,566, an increase of $38,052 as compared with the same month of last year, and net $219,802, an increase of $3,933. For the seven months ending January 31 the gross earnings were $4,651,834, an increase of $412,780 as compared with the corresponding period of last year, and net $2,056,725, an increase of $237,709. Fixed charges were $1,591,779, leaving a surplus of $464,946, an increase of $50,307.

The Rio Grande Western Railroad reports gross earnings for January of $160,259, an increase of $14,507 as compared with the same month last year, and net $53,466, an increase of $14,472. For the seven months ending January 31 the gross earnings were $1,509,281, an increase of $218,239 as compared with the corresponding period of last year, and net $589,116, an increase of $154,692.

The St. Louis, Alton & Terre Haute Railroad reports gross earnings for December of $110,998, a decrease of $3,742 as compared with the same month of the previous year, and net $64,010, an increase of $4,223. For the six months ending December 31 the gross earnings were $692,962, a decrease of $29,909 as compared with the corresponding period of the previous year, and net $370,607, a decrease of $2,162.

President John K. Cowen and Vice-President Oscar G. Murray were on Saturday evening appointed receivers for the Baltimore & Ohio Railroad Company by Judges Goff and Morris, of the United States Circuit Court.

The Canadian Pacific Railroad Company reports for January:

	1896.	1895.	Changes.
Gross earnings	$1,474,998	$1,170,036	Inc. $303,962
Operating expenses	979,048	826,316	Inc. 154,732
Net earnings	$495,950	$346,720	Inc. $149,230

Attention is directed to the change made by the Pennsylvania Railroad Company in the form of its monthly statement of comparisons of earnings. Heretofore the company included in its statements of "lines east of Pittsburgh and Erie" only the figures of what are known as the three grand divisions, to wit, the Pennsylvania Railroad Division, the United Railroads of New Jersey Division, and the Philadelphia & Erie Railroad Division, which it operates directly, while the figures given for the lines west of Pittsburgh and Erie covered only those lines which are operated directly by the Pennsylvania Company and the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company, and in the latter case revenue other than earnings from traffic was included. The form now adopted and hereafter to be used gives, under the headings "Pennsylvania Railroad (lines directly operated)" and "Lines west of Pittsburgh, directly operated," all the information heretofore given, and, in addition, figures covering the entire system east of Pittsburgh and Erie, that is, including those for the Philadelphia, Wilmington & Baltimore Railroad, Northern Central Railway and other important lines, while west of Pittsburgh all lines are likewise covered, and no revenue but earnings from traffic is included therein.

A telegram from Seattle, Washington, says that the late land and snow slide on the Great Northern in the Cascade mountains developed into a very disastrous one. "Rocks, trees and earth were swept down the mountain side, carrying away snowsheds, bridging and tracks."

Miscellaneous.

The *American Agriculturist* says that the "bill now before Congress introduced by Representative Bankhead, an Alabama farmer, will if it ever becomes a law and is enforced, most effectually put a stop to short selling. It simply taxes to death the business. It provides that every contract to sell for future account which is settled otherwise than by absolute delivery, can be completed only by payment of a tax at the rate of one cent on every pound of cotton or provisions and two to three cents on each bushel of grain."

The *Cosmopolitan Magazine* is announced to have offered $3,000 in premiums "which will be awarded to motor carriages exhibiting the greatest excellence in a trip to be made on Decoration Day, May 30, between City Hall Park, New York, and the Cosmopolitan Building at Irvington-on-Hudson, the round trip being about 52 miles."

Foreign.

Mexican cotton mills and print works are said to be gaining new territory for the sale of their products, and the merchants in the City of Mexico are sending cotton prints to west-coast cities and driving British and other foreign goods out of the market. Mexican cotton goods, it is asserted, can be sold at about $1.20 per piece less than British cottons. Large shipments are being made to Mazatlan and other west-coast points, where formerly foreign goods held the market.

Roumanian imports of English goods are said to represent at present about 24 per cent. of all Roumanian imports. "Both Manchester and Birmingham could easily double theirs if they employed English travelers or English agents instead of getting their orders through Germans or Austrians, who are mostly at the same time agents for Austrian and German manufacturers, who pay them good commissions and give their clients longer credits. The exports to England represent about 50 per cent. of Roumania's exports, and are entirely agricultural produce."

The production of gold in western Australia for the year 1895 is officially reported at 231,513 ounces, against 207,131 ounces in 1894, and 110,891 ounces in 1893. The production is in fine ounces.

It is announced in London that the recent losses of sheep in Australia from drought approximate 9,500,000 head. "It is predicted that the wool clip will fall off 180,000 bales as compared with 1895. The markets for wools are dull in England, with little change in price recently, and there is complaint in Bradford that America is not as active a buyer of woolens as she was a year ago. If the losses of sheep in Australia prove as heavy as is reported it will affect wool prices the world over."

An article in the London *Labor Gazette* gives some figures with regard to the trade disputes in 1895. In all 778 disputes were reported as beginning in 1895. Particulars were obtained with regard to 772 which affected about 243,500 persons, compared with 324,245 persons in 1,061 disputes in 1894, and 636,386 in 782 disputes in 1893. About 46,200 people in 258 disputes were successful, 96,500 in 102 disputes were partially successful, 72,300 in 195 disputes were unsuccessful, while in the case of 88 disputes, involving 15,300 persons, the result was indefinite or not reported. The disputes affecting the largest number of persons were those in the boot and shoe trade and in the textile trades. The following comparative table shows the relative degree of success and failure in the past seven years:

Per cent. of people in disputes who were:	1889.	1890.	1891.	1892.	1893.	1894.	1895.
Successful	28	54	25	27	62	22	20
Partially successful	56	16	36	51	24	34	41
Unsuccessful	12	25	34	19	12	42	51
Result indefinite or unknown	3	3	3	1	..	2	6

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Constitutional Law—Textile Schools.

The Supreme Court of Massachusetts held, in the case of Hanscom et al. vs. The City of Lowell, that it was constitutional for the legislature to pass an act to establish a textile school in a large manufacturing city under part 2, chapter 5, section 2 of the constitution of the state, which enjoins the legislature to encourage manufactures.

Debtor and Creditor—Transfer.

The Massachusetts Supreme Court held, in the recent case of the Traders' National Bank vs. Steere et al., that a bill in equity would not lie by a creditor against other creditors to have property which was alleged to have been transferred discharge the indebtedness due them and to compel them to surrender the evidence of their obligation and not prosecute the debtor for a crime, where the contract which they made was executed and the property transferred to them was not more than sufficient to pay their debts, and where it did not appear that the transfer was fraudulent as against creditors of the debtor.

National Bank—Deposits—Priority.

The case of Davis, Receiver, vs. The Elmira Savings Bank, just decided by the Supreme Court of the United States, came before that court on appeal from a decision of the New York State Court of Appeals, which held that under a New York statute the savings bank was entitled to have its deposit of $40,000 in the national bank first paid before other depositors were paid. The Supreme Court, reversing the New York decision, held that the law of Congress requiring a ratable distribution of the assets of a failed national bank among its creditors was impinged upon by the state statute making preferences of savings banks deposits, and that so far as the impingement extended the state law was inoperative against the federal statute.

Account—Sales—Credit.

The Supreme Court of Georgia held, in the recent case of Parks vs. Oskamp et al., that where one sold to another on credit two bills of merchandise on different days in two consecutive months of the same year, the presumption, in the absence of any proof to the contrary, was that the demand arising upon the two sales constituted one entire and indivisible account in favor of the seller against the purchaser, and this being so, the former could not divide the same into two separate accounts predicated respectively upon the two sales, so as to bring actions thereon within the jurisdiction of a justice's court, and that where two such actions were brought and a plea in abatement for want of jurisdiction was filed, the burden of proof was upon the plaintiff to show that the two alleged accounts were not one and the same account, but that they arose upon separate and distinct transactions.

Interest—Usury—Commissions.

The Supreme Court of Georgia held, in the recent case of McLean vs. Camak, that although the maximum legal rate of interest was charged upon a given loan, the mere fact that the lender's agent exacted from the borrower an additional sum as commissions did not render the transaction usurious as to the lender, when he did not authorize such exaction, had no knowledge of the same and did not share in the commissions, and that in determining whether or not, as matter of fact, the lender had knowledge of the agreement between his agent and the borrower for the payment of such commissions, the law of implied as well as express notice might be invoked, but the agent's own knowledge of the fact that he did charge such commissions, uncommunicated to his principal, was not imputable to the latter, the doctrine of constructive notice not being pertinent to the inquiry.

Railroad—Express Company—Contract.

The case of Kidder vs. The Fitchburg Railroad Company, recently decided by the Supreme Court of Massachusetts, was brought by the plaintiff under chapter 469 of the acts of 1894, to compel the railroad company to permit him to carry on a local express business on its passenger trains. The company refused to allow this, because it had made a contract with another company, giving the latter company the exclusive right to use its trains for the carrying of express bundles, to last until 1901. The court decided in favor of the plaintiff, holding that he was entitled to a mandatory injunction giving him the privilege of doing his express business on the passenger trains of the defendant railroad upon terms, and with facilities and accommodations, which should be reasonable, and equal to those furnished to other companies doing business over the defendant railroad, having regard to the amount and character of the service, and also to such reasonable regulations of the business as might be required for the public interest and the efficient operation of the railroad.

Stockholders' Liability—Stanford Case.

The Supreme Court of the United States this week decided against the government the case of the United States against the Stanford Estate. The court held that the acts of Congress of 1862, 1864 and 1865, all related to one subject, and must be considered as a whole when their application to that subject is to be learned. The acts of 1862 and 1864 provided for the sale of the railroads and their property in case the corporations failed to pay the bonds, as the full extent of the protection Congress deemed it necessary to make for the repayment of their debts by the companies. No one of these acts contains a clause imposing personal liability upon stockholders for the debts of the corporations. Congress could have done so, but failed, and stockholders therefore are not to be held liable. The state laws of California regulating the personal liability of stockholders, the court held, could not be held to apply, except on the theory that Congress intended to require a greater security for the loan to the Central Pacific than for that to the Union Pacific, and there was no evidence in the legislation of any intent to make such discrimination.

Surety—Liability—New Employment.

The Court of Appeals of the District of Columbia held, in the recent case of The United States vs. West et al., reported in the Washington *Law Reporter*, that where a bond is given for the faithful discharge of duty by the principal in one employment, it cannot be extended by construction to cover another employment, although of the same kind, and the second employment be designated as an extension of the first. In this case it appeared that a special disbursing agent of the Treasury Department, at the termination of his first employment, for the faithful discharge of the duties of which he had given bond, presented his accounts to the department, showing a balance in his hands, and before his account was stated and the balance paid over by him, he received a second appointment of the same kind, and other funds were intrusted to him, and upon the termination of the second employment his accounts were presented, showing a balance in his hands under such second employment also, and he defaulted in the payment of both balances. The court held that the sureties in his bond were liable for his default under the first appointment, but not for any subsequent default by him, and that the fact of the appointment of the principal to a second employment before the settlement of his accounts and payment of the balance due from him under the first employment, did not operate to transfer that balance to the credit of the second employment so as to release the sureties from liability for the default under the first employment.

Note—Indorsement—Consideration.

The Supreme Court of Louisiana held, in the recent case of McPherson vs. Bourdreau, that where a person a few days after the execution of a note payable on demand to the maker's order, and indorsed by him in blank, had had the same transferred to him in good faith for a valuable consideration in due course of trade and without notice, as collateral security for a note to him by a third person, to whom the maker had delivered it, the equities existing between the original holder and the maker were cut off so far as they affected the second holder, and they were not thrown open because at a later date the party holding the note as collateral accepted it in absolute ownership and credited its amount upon the main or principal note; that where it was shown that a person claiming to hold a negotiable note, indorsed in blank as collateral for a note due her by her brother-in-law, placed it in the hands of her sister, the wife of her debtor, for safe keeping, but subsequently regained possession of it, accepted it in full ownership and credited the amount of the same upon the main or principal note, the fact, whatever weight it might have as throwing a suspicion upon the reality of the original situation of the parties, did not, if their reality had been established, work a forfeiture of the rights of the pledgee and upon the equities, and that where the plaintiff brought suit as the holder and owner of a promissory note against the maker and was met by equities set up by defendant or existing between himself and the original holder, coupled with averments charging the plaintiff with knowledge of the same and denying his good faith, he was entitled to repel the attacks and show the date of his original connection with the note and the terms under which he first held it.

BUSINESS NOTES.

Cost of Germany's Ship Canal.

A definite official statement of the cost of that great engineering work, the Kiel canal, shows the reaching point to have been some $39,000,000. It is about 61 miles long, 20 feet deep at dead low water, and 229 feet wide, in numerous places the width increasing to some 428 feet, to allow the largest vessels to pass each other, and work will be continued until vessels of any depth can pass at low water. The embankment is stone lined to a depth of six feet below the water, and the locks at the North Sea end of the canal are said to be the largest in the world, with the exception of that at Bremerhaven. Two bridges span it at a height of 137 feet above the water, and there are also six opening bridges and sixteen ferries.

The Hudson's Bay Route.

At the London Imperial Institute, recently, Colonel J. Harris delivered a lecture on "The New British Trade Route to the Pacific." He traced the new route on a map, from Liverpool to Churchill Harbor (Hudson's Bay), and thence to Sea Falls and Albert Park, joining the Canadian Pacific Railway at Calgary. The distance from Port Churchill to Calgary is about 1,000 miles, and a saving of 1,328 miles over the present route from Liverpool to San Francisco and Vancouver would thus be effected, or, in other words, three days would be saved in going to India, China, Japan and our Pacific colonies. The London *Times* says "the necessity for the new railway was insisted upon as a vital and imperial question."

The New Locomotion.

The *Pall Mall Gazette* (London) says: "Horseless carriages have run into the market at last. The Daimler Motor Company (Limited) has been formed to carry on the manufacture and sale in this country of the Daimler motor, used for carriages, launches, stationary engines, light locomotives, and the like. The capital is £100,000, in 10,000 £10 shares, all now offered for subscription, and of which 6,000 are to be allotted for the provision of money for working purposes. The price of the right to use all or any of the Daimler patents here, together with the benefits of all further improvements, is 4,000 shares, or cash in lieu thereof, and the option of subscribing at par for any unallotted shares of this issue."

Dornbusch (London) on World's Wheat.

The American continent, it says, "is credited with having grown in 1895 about 76,500,000 quarters, or just 1,000,000 quarters in excess of 1894, although the increase in the United States and Canada more than compensating the expected deficiency in Argentina. The harvest results in the other continents possess no immediate interest, for not much in the way of exports is looked for from India, and Australia has become an importer."

Exodus of Illinois Farmers.

A Fairbury, Ill., dispatch to the St. Louis *Globe-Democrat* says: "Another exodus of Livingston county agriculturists to points in Iowa, South Dakota, Minnesota, Nebraska, Missouri and northern Indiana took place this week. Special trains for Iowa, composed of freight cars laden with the emigrants' machinery, stock and household goods, and coaches containing the families of the movers, have departed all week over the Illinois Central Railroad. Fully two-thirds of the movers go to Iowa, while the remainder are equally distributed among the other states. Nearly one hundred families will leave this county alone. Their reasons for moving away from this section, which lies in the great corn belt, are that lands have risen greatly in price in ten years, and rents have gone up accordingly, from two-thirds grain rent ten years ago to one-half in most cases now."

"Bradstreet's" and Corn Shipments.

The New York correspondent of the Minneapolis *Northwestern Miller* says: "In the last week's exports of corn, as reported by BRADSTREET'S, the total was 3,222,000 bushels, of which New York got a paltry 205,000 bushels, Philadelphia 117,000 bushels, and practically all the rest was south of Baltimore, or 2,900,000 bushels, out of the total of 3,200,000 bushels, went out by the southern routes. * * * The acute trouble seems to be in the terminal charges at New York. Grain arriving by railroad has a provision of lighterage free, but the actual result, including one charge and another, is an expense of 1⅜c. per bushel to put the grain f. o. b. afloat, providing it goes out promptly on arrival. On grain taken out of Brooklyn warehouse and put f. o. b. afloat, the cost is 2¼c. per bushel, and on grain arriving by canal the cost is 1⅜c. per bushel, to deliver it f. o. b. afloat. This is a direct discrimination in favor of the railroads over the store price, while, owing to the smaller charge, grain is taken from both the railway and the canal boats before it goes from store. This provision seems to be one simply to hold grain in Brooklyn stores."

Passengers on European Railways.

Signor Bodio, in a recent report to the Railway Tariffs Committee in Italy, gave some detailed figures as to the mileage and number of passengers on the principal railways of Europe, which are as follows:

Name of country.	*Mileage.*	—*Number of passengers*— *Per annum.*	*Per 100 pop.*
Germany	26,250	483,000,000	978
France	23,750	305,000,000	796
Great Britain and Ireland	20,625	864,000,000	2,282
Russia	18,100	33,000,000	33
Austria	9,375	85,000,000	355
Italy	8,750	51,000,000	171
Hungary	6,850	37,000,000	214
Belgium	2,875	87,000,000	1,426
Switzerland	2,185	37,000,000	1,259
Holland	1,875	33,000,000	726
Roumania	1,500	5,000,000	95

With the exception of Russia and Roumania, Italy has fewer railway passengers per head of the population than any of the other countries, and Signor Bodio adds that, while of the available seating accommodation in trains 35 per cent. is occupied in France, 28 per cent. in Belgium, 27½ per cent. in Switzerland, 27 per cent. in Hungary, and 25 per cent. in Germany, only 23 per cent. is occupied in Italy.

Increased Power at Niagara Falls.

An exchange says that "there is a possibility that there may be a very notable change in the installation of the seven additional dynamos soon to be placed in the plant of the Niagara Falls Power Company. When Secretary William B. Rankine was in the city of Niagara Falls a few days ago he stated that there would be a slight delay in letting the contract for the extension of the wheel pit and power house, owing to the fact that the company is considering a proposed change of plan for the installation of the dynamos. The two 5,000 horse-power generators now at work are connected to the turbines in the wheel pit by a steel tube 166 feet long, which is 38 inches in diameter, except at points where it passes the journal bearings or guides, at which it is 11 inches in diameter and solid. Now, it is understood, if the electrical companies can guarantee the efficiency of the dynamos if placed at the bottom of the wheel pit, the additional generators will be placed there. This will be a startling innovation indeed. However, if practicable, it would be a very economical method, for it would result in dispensing with the expensive shafts which now extend up through the wheel pit."

Trade with British Colonies.

The London Parliamentary Committee of the United Empire Trade League "believes that its hands are strengthened by a paper just issued at the instance of Sir Howard Vincent, showing the preferential fiscal advantages enjoyed by the colonial trade of France, Spain and Portugal. It appears that Great Britain alone of important colonial powers treats the colonies on no better footing than foreign countries, or receives no advantage for the mother country in colonial markets. In nearly all the colonies of France, French goods are inported free of duty, and enjoy a privileged footing as regards foreign countries. Colonial produce imported into France is also either exempt from duty or is given considerable privileges. The general principle obtaining in Spain is absolute freedom for all colonial products imported into Spain, and for all Spanish goods exported direct from the mother country to the colonies, and, so far as is known, the colonies will continue to be treated on another and more favorable footing to that accorded to all foreign countries. Portugal likewise reduces its duties by one-half in favor of colonial produce, and receives also similar or greater advantages from the colonies for the produce of the mother country. Germany, not being as yet a colonial power, does little to develop her own colonial trade, although very eager for that of British colonies. There is, however, this important declaration by Mr. Martin Gosselin, of the British Embassy at Berlin: 'The general impression in this country appears to be that differential duties in favor of the trade of the motherland and her colonies, and vice versa, might be introduced in spite of the most favored nation clause, in the absence of an express stipulation to the contrary in the treaties.'"

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade began the week relatively less favorably, but with the change from high winds and extreme cold, which checked trading, to milder weather, increased purchases and brighter prospects for business have appeared.

Unfavorable conditions previously reported are continued, but they are less numerous than those pointing to improvement. Conspicuous among them is continued depression in the woolen and cotton goods manufacturing industries. Trade with manufacturers in those lines is very dull, some cotton mills running on half time. Makers of woolen goods report spring trade over, fall trade not yet begun, and much men's-wear woolen machinery idle. Iron and steel have had an unsatisfactory demand, and prices of billets and southern pig are shaded. There are also reductions in quotations for cotton, print cloths, petroleum, hides, and for wheat, Indian corn and oats. Mercantile collections are generally unsatisfactory, notably at Chicago, where they are more complained of than for a year past.

The distribution of general merchandise is fairly satisfactory at the south, and least favorably regarded east and north. Relatively the most active demand is prevalent in the territory of which Chicago, St. Louis, Kansas City, Omaha, St. Paul and Minneapolis are leading supply centers. Rains in Oklahoma and snow in Kansas have stimulated trade, as has the free movement of Indian corn from first hands in Nebraska. Interior merchants south have met nearby needs, and Baltimore travelers report sales throughout south Atlantic coast and Gulf states satisfactory. Relatively the most favorable southern trade reports come from Jacksonville, but Galveston says general business is quiet and collections are unsatisfactory.

Extreme cold on the Pacific coast had the usual unfavorable influence, particularly in Washington and Oregon, fruit having been hurt in the former state. Tacoma's February exports are declared the heaviest in the history of that port. Trade on the Pacific coast, while relatively good on the whole, is smaller than a week ago.

Business failures throughout the country number 270 this week, against 271 last week, thus maintaining the improvement shown for nearly a month. The total in the corresponding week a year ago was 252, in the like week of 1894 it was 233, and in 1893, 221.

February bank clearings reflect activity at the banks as a result of the bond issue and also the inclusion of one more business day in February, except in five states. Increases over last year are more numerous than for months past, and the percentage of gain in the aggregate for February is larger than that for January. Total February clearings at 68 cities aggregate $4,083,486,955, a decrease from the January total this year of 10.8 per cent., but an increase over the February total, 1895, of 20.3 per cent., and over February, 1894 (the smallest monthly total for ten years), of 28 per cent. Compared with February, 1893, just before the panic, the decrease last month was 19 per cent. The February gain at New York over last year is 27 per cent., but outside of New York the gain is less than 12 per cent. Among large cities showing gains are Minneapolis 58 per cent., New Orleans 42, Cleveland 34, Baltimore 29, Pittsburgh 26, and Omaha 23 per cent. The heaviest February decrease this year among the larger cities is that reported by Cincinnati, 8.3 per cent.

The falling off in the world's supply of available wheat during February, about 6,000,000 bushels, appears disappointing, inasmuch as the February decrease for 1895 was 9,000,000 bushels, but it will be recalled that in the corresponding month of 1894 American, Canadian, European and afloat stocks increased 180,000 bushels, and in February, 1893, 100,000 bushels. In the United States and Canada, both coasts, the February decrease of available wheat supplies was 4,647,000 bushels, which is not bullish in the face of a decrease of 9,489,000 bushels in February last year, but it is contrasted with the 3,587,000 bushels decrease in February, 1894.

While the price movement is not wholly favorable to the producer, there are noteworthy advances, nails and iron beams and even steel billets at Chicago, zinc and lard and coffee, while prices of wheat flour, pork and sugar remain unchanged. But the week's clearings are significant. The total for the country for six business days ending with March 5 is $1,062,000,000, an increase of 16 per cent. over last week, 6 per cent. over the corresponding week one year ago, and 13 per cent. more than for the first week of March, 1894. Compared with the large aggregate of clearings in the like week of 1893, this week's total shows a decline of only 18 per cent., and of only 16 per cent. compared with the corresponding total in 1892, it actually being one-half of 1 per cent. larger than the total in the first week of March, 1891.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,407,000 bushels, against 2,206,000 bushels last week, 3,272,000 bushels in the first week of March, 1895, 2,851,000 bushels in the corresponding week in 1894, 2,894,000 bushels in 1893, and as compared with 3,754,000 bushels in the like week in 1892. Exports of Indian corn are 2,775,000 bushels this week, against 3,158,000 bushels last week, 498,000 bushels in the corresponding week a year ago, 1,947,000 bushels two years ago, and as compared with 679,000 bushels in the like week of 1893.

Stock values at New York withstand the unsettling influences of the Cuban resolutions and the Baltimore & Ohio receivership, and prices have shown a strong undertone, though speculation continues dull and uninteresting. Baltimore & Ohio has had an extremely heavy decline on reports of a large assessment in the coming reorganization. London is still indifferent to American stocks, but has bought scattering amounts of bonds. Foreign exchange is stronger on decreased drawings, but ease off at the end of the week. Demand sterling, 4.87¾.

The trade situation throughout the Canadian Dominion, while presenting few features of improvement, gives indications of approaching increased demand. Toronto jobbers report collections have improved and country merchants making more inquiries. At Montreal, wholesale millinery openings have been satisfactory, and payments on accounts equal to the average. The principal restriction to the movement of merchandise in the Province of Quebec is declared to be the nearly impassable roadways. The like is true throughout Nova Scotia, but in New Brunswick prospects are for some improvement as the winter has greatly favored lumbering interests. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $17,121,000 this week, a decrease of nearly 5 per cent. from the total last week, 6 per cent. from the corresponding total one year ago, and nearly 4 per cent. less than the clearings total for the first week of March, 1894. The record of business failures throughout the Canadian Dominion is rather less favorable than in preceding weeks, the total being 66 against 51 last week, as compared with 53 in the week one year ago, 62 in the like week of 1894, and with only 38 in the corresponding week of 1893.

FINANCIAL.

The Money Market.

Offerings of funds have increased within the past week, and the New York loan market has an increased tone of ease. Better conditions also prevail at some of the nearby cities, where more or less of a lock-up of funds prevailed. Beyond this there is little to record concerning the week just ended. Call money has been plentiful, the Stock Exchange rate for bankers' balances being 3@4 per cent. The amount of time money seeking investment has increased somewhat, and though rates are unchanged at 3@3½ for short, and 3½@4 per cent. for long dates, there is less scouting of collaterals. The supply of commercial paper is increasing and the buying demand is broader, but there is still some discrimination as to names, the current rates for doubles being 5@5½ per cent.

* Last week's total. † Not included in totals because containing other items than clearings. § Not included in totals because of no comparison for last year.

The New York Banks.

A further decrease in the cash holdings and an expansion in the loans are the features of the averages for last week. The result of the other changes is a further decrease of $4,204,900 in the surplus reserve. The figures of the statement compare as follows with those of the preceding week:

	Feb. 29, 1896.	Feb. 21, 1896.	Changes.	
Loans	$462,521,900	$457,795,800	Inc.	$4,726,100
Specie	60,304,000	63,920,900	Dec.	3,616,900
Legal tenders	80,521,200	87,139,300	Dec.	618,100
Deposits	489,612,200	489,732,600	Dec.	120,100
Circulation	13,610,600	13,386,400	Inc.	233,200
Total reserve	146,825,200	151,060,200	Dec.	4,235,000
Reserve required	122,403,050	122,433,150	Dec.	30,100
Surplus reserve	24,422,150	28,627,050	Dec.	4,204,900

At the corresponding period last year the surplus was $28,054,500, against $75,778,900 in 1894.

Silver.

The silver market has been strong to steady all week, but without any features of particular importance. The London quotation for bars advanced from 31 3/16d. per ounce to 31 3/8d. and receded to 31 5/16d. The New York market rose correspondingly from 68¼c. to 68½c., and remained unchanged at the latter figure.

SILVER PRICES.

	Feb. 29.	Mar. 2.	Mar. 3.	Mar. 4.	Mar. 5.	Mar. 6.
London	31 3-16d.	31 3-16d.	31 1/4d.	31 3/8d.	31 5-16d.	31 5-16d.
New York	68¼c.	68¼c.	68½c.	68¼c.	68½c.	68½c.

Foreign Exchange.

A slightly firmer tone was displayed in the exchange market this week, though quotations remain well below the gold exporting figures. The discussion of the Cuban question at Washington seems to have had some slight effect in making bankers more conservative. Consequently, though the inquiry from importers was so small as to render the

market fairly stagnant at times, there was no disposition to make concessions in selling bills. The supply of commercial bills was relatively small and offerings of drafts against securities purchased for foreign account showed a marked decrease. Posted rates were advanced on Monday ½c., for both long and short, to 4.87½@4.89. Actual business for demand sterling, which was 4.87¾ at the close of last week, was a shade higher at 4.87¾@4.88.

@	@	@	@	@	@
4.86¾	4.86¾	4.87	4.87	4.87	4.87

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¼@4.88½; commercial bills, 4.86@4.86¼; francs, 5.18⅛@5.16¼; reichsmarks, 95@95⁷/₁₆.

The Bank of England discount rate remains unchanged at 2 per cent. The bank this week lost £158,000 in specie, its proportion of reserve to liability being 61.83 per cent. against 63.38 per cent. In the London open market call money is ½@¾ per cent. and discount ⅞@¹⁵/₁₆ per cent.

THE STOCK MARKETS.

The New York Stock Market.

Speculation has been more or less unsettled all week by the action of the House and Senate on the Cuban resolutions, and the fear that acute complications between our own and the Spanish governments might result. This supplemented the effect of the Baltimore & Ohio receivership, though the latter event failed to have the bearish influence upon the London market that was expected by the trading element in Wall street. It is true that the collapse of an important trunk line has given a blow to the growth of foreign investment buying of our securities, but it has not caused active European selling, and at the worst the London market remains indifferent to Americans. The fact, pointed out in another column, that consols in London are at the highest prices on record, yielding a little over 2 per cent., and that English rails and similar securities are at prices which mean starvation for the British investor, seems to exercise a powerful influence in directing attention to American obligations of the better class, even if for the moment the buying of them abroad is spasmodic and mainly professional. London was scarcely a factor in our market, while the short interest formed last week was sufficiently large to have a sustaining influence in prices. This was evident in spite of the bearish pressure exerted in Burlington & Quincy, and disappointment with the slow movement of corn, and with the lethargic conditions that are still exhibited in the iron industry and other important lines of trade. On Friday the market was stagnant, closing dull and lower on sales by traders.

Baltimore & Ohio broke to 17 on the announcement of the receivership, but rallied to 20. This latter movement was, however, entirely due to the covering of the short interest, but an outpouring of long stock ensued which by Friday caused a further decline to 12⅞. The reorganization committee is an excellent one, comprising as it does such names as those of Gen. Fitzgerald and Mr. Belmont. At the same time it must be observed that the delay, even if a necessary one, in making public the facts ascertained by Mr. Little—the expert who examined the property for the bankers' syndicate which lately declined to finance the company and save it from bankruptcy—has a disturbing effect and gives currency to perhaps exaggerated reports of the condition of its affairs and the actions of the former management. Among the unsettling influences in this connection is the well grounded fear that in order to restore the company's finances an unusually heavy assessment on the stock will be required.

The attack on Burlington, which sold down from 78¾ to 75⅝, was in its nature a bear movement. It was based upon the relatively unfavorable earnings of the company for January and the failure of the expected movement of corn to ameliorate its position. The argument is that the present 4 per cent. dividend rate cannot be maintained unless earnings are increased, while an additional pressure was created by an unsupported rumor that the same expert who examined Baltimore & Ohio was to be employed by certain stockholders to conduct a similar investigation in regard to Burlington. The short interest in the stock is, however, large, and its covering caused a rally to 77⅝. St. Paul was strong, rising from 75 to 78⅜, and its price for the first time on record crossed that of Burlington. The declaration of the St. Paul's semi-annual dividend next week is awaited with interest, though reports that it will be at the rate of 2½ per cent. are not believed in Wall street, the general impression being that 2 per cent. will be the maximum, notwithstanding the large increase in earnings.

More or less attention has been paid to the Northern Pacific securities, particularly the 5 per cent. consols and the preferred stock. The latter rose to 17⅜ on reports that a reorganization would be soon proposed on much more favorable terms than those heretofore suggested.

The industrials were less active than usual. Sugar was irregular, and the manipulation in it seems to be regulated by the fact that the German Reichstag now has under consideration the bill increasing the sugar export bounty. Tobacco was active, and while some short interests covered, fresh bear accounts seem to have been created on talk of a new issue of preferred stock and of the intensity of the fight with the anti-trust manufacturers. Rubber declined to 22½ on the news of withdrawals from the board, and United States Leather preferred was the object of bearish pressure of a professional kind.

General Mention.

Messrs. Speyer & Co. announce they are prepared to purchase at face value coupons maturing March 1 of the Central Ohio Railroad Company's consolidated first mortgage 4½ per cent. bonds due 1930; also any past due coupons of the Baltimore & Ohio Railroad Company's 5 per cent. gold bonds due 1925 (loan of 1885). They further give notice that they will receive, as depositaries, the last-mentioned bonds with all maturing coupons attached, on the terms of an agreement in course of preparation for the purpose of protecting the interest of the bondholders. Under this agreement they will undertake to purchase at their face value the August 1, 1896, coupons of the deposited bonds in case they shall not be paid at maturity. Messrs. Speyer Brothers, of London, will receive the deposit of bonds in that city.

Messrs. J. P. Morgan & Co. announce that they are now prepared to receive their reorganization certificates for securities of the New York, Lake Erie & Western Railway Company for conversion into securities, as provided in the plan of reorganization.

As noted at length among other points in our editorial columns, the report of the Pennsylvania Railroad Company shows that during 1895 the gross earnings of all its lines east and west of Pittsburgh were $132,720,811.66; operating expenses, $92,859,286.66, and net earnings, $39,861,525. There were moved 160,410,144 tons of freight, and 75,052,479 passengers were carried.

As may be seen by reference to our advertising columns, opportunity is now offered holders of certificates of the Manhattan Trust Company, issued under the plan of reorganization of the Distilling & Cattle Feeding Company, to subscribe at par for the first preferred stock of the newly organized distributing company, to the extent of 6 per cent. of the par value of their holdings, or any part thereof, receiving in addition 50 per cent. of the amount of their subscription in second preferred stock. The reorganized Distilling & Cattle Feeding Company regard the new project, that of distributing its product itself, as promising to be exceptionally profitable. Subscriptions to the Spirits Distributing Company's stock must be delivered at the office of the Manhattan Trust Company, New York, not later than noon on Saturday, March 7, together with a check for the first installment of 15 per cent.

The published annual statement of the Mutual Life Insurance Company of New York presents even more interesting and, in some respects, more striking totals of business transacted during 1895 than in previous years. Holders of policies in that company were paid on death claims no less than $12,239,164 34 in the previous calendar year, while living policy-holders received in the form of endowments, annuities, dividends and other payments $10,887,564.11. The reserve fund of the company, which guarantees the future payment of all claims, was increased from $182,109,456.14 to $194,347,157.58, an increase of $12,237,701.44, or about 7 per cent. within one year. A summary of the assets of the company, including United States bonds and other securities, first loans on bond and mortgage, and on stocks and bonds, real estate held by the company, cash in banks and trust companies, together with accrued interest, deferred premiums, etc., shows the extraordinary total $221,213,721.33, against which are liabilities amounting to $194,347,157.58. The additional security of a surplus fund to insure the policy-holder against every possible emergency affecting the payment of dividends amounts to $26,866,563.75, and the insurance and annuities assumed and renewed by the Mutual Life during 1895 aggregate $813,266,899.50. The growth of assets of this company during the past ten years has been from $114,181,953 on January 1, 1887, to $136,401,328 on the corresponding date in 1890, to $175,084,157 in 1893, and to $221,213,721 on January 1, 1896.

TRADE FEATURES.

SOME IMPROVEMENT IN DEMAND IN THE SPRING WHEAT STATES, BUT LEADING MANUFACTURING INDUSTRIES CONTINUE DULL.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, March 6.—For most kinds of merchandise trade continues quiet, with only a hand to mouth business doing in general lines. The money market is quiet, but rates show considerable strength. Time money ranges from 5 to 7 per cent., with most paper selling at 6@7 per cent., western paper being quoted at 6½@7 per cent. Call money sells mostly at 6@7 per cent. The boot and shoe trade is showing more business, there being a large number of buyers in the market. They are doing more in sample lots, however, than placing large orders. Leather is steady, with a moderate trade, while hides are dull, with offerings small. The hide situation continues to look strong, and any good demand will be likely to advance prices. Iron and steel are moving slowly, with values steady. Trade in lumber is fair, with prices steady. Coal is quiet at first hands.

Providence, March 6.—General business does not improve. Textile manufacturers still find orders light and report little or no profit in manufacturing at present prices.

Philadelphia, March 6.—Wool is quiet with firm prices. A limited business is being done in cotton yarns. Dry goods jobbers and clothing manufacturers report a slow trade. Morocco and leather continue dull; manufacturers and jobbers both anticipate a dull and unsettled market for some time to come. Paints, glass and drugs are in moderate request.

Pittsburgh, March 6.—The condition of general trade here has not materially changed. A good demand is noted in all staple lines, and prices are well maintained. Some complaint is still heard concerning collections, but otherwise business in general seems to be in a healthy condition. The iron market continues in a listless condition. Dealers report but few sales, but prices appear firmer.

Buffalo, March 6.—There is no change in general trade. Bank clearings indicate the volume of business is less than in the corresponding week last year. Collections are still slow.

Baltimore, March 6.—Leading jobbing houses report the majority of their salesmen home from their first spring trip, and that sales have been quite satisfactory. There are quite a number of southern merchants in the city this week who are buying conservatively. Collections are not up to expectations.

West and Northwest.

Cleveland, March 6.—In other than staple or leading merchandise lines trade moves in moderate volume and without any special change. With favorable weather conditions a fair spring business is anticipated. Country collections are not satisfactory.

Detroit, March 6.—Continued quiet prevails in general merchandise lines. Manufacturers are fairly busy, but collections are still slow and unsatisfactory.

Chicago, March 6.—There has been an improvement in the general trade this week, especially in dry goods. Buyers have been here in larger numbers, and have made liberal purchases. All, however, show a disposition to work cautiously, as they do not want to get overstocked. The other lines—millinery, clothing and shoes—have participated in the improvement to a less extent, but prospects are for a better business before the close of the week. Light and heavy hardware are taken more freely. Wagon makers and car builders are buying. The latter are unusually well supplied with orders, and are securing material. Large sales of steel pipe in the east have increased the demand for billets, and sales have been made at $19.50 to $20 here. Steel rods are active and firm at $28 to $29. Pig iron holds the activity of the previous week. Lumber is rather quiet, but has improved. Coarse stock is easy, but better grades are firmly held, owing to the light stocks. Eggs are firmer, butter steady with less demand. Potatoes are lower The fresh vegetable trade is increasing. Wool receipts, 117,755 pounds.

Louisville, March 6.—Trade in dry goods is of a satisfactory character, showing in some cases an increase over last year. Millinery, hats, caps, clothing and hardware have improved. Collections are only fair. Leaf tobacco is strong. Offerings are mostly of a good quality.

St. Louis, March 6.—There is a good seasonable demand for staples, and while general trade is ahead of last year, the improvement is slow in a majority of lines. Manufacturers of boots and shoes and jobbers of dry goods are satisfied with results so far, and proportionately are ahead of other businesses. Oak and hemlock sole leather are fairly active, but purchases are small and frequent. The hide market is unchanged, receipts being light and concessions granted. A good business is reported by manufacturers of barbed wire, without change of price. Nails have advanced, and sales have been stimulated. Spelter and zinc show a betterment in values. Finished iron and steel products are unchanged in price. Structural material shows considerable activity. Collections are only fair.

Kansas City, March 6.—Good rains in Oklahoma and snow in Kansas have made a marked improvement in all lines of trade. Collections are good.

Milwaukee, March 6.—Trade continues quiet in most lines, and no immediate prospects for improvement are apparent. Collections are slow.

St. Paul, March 6.—Trade for January and February has in the main been quite satisfactory, and so far sales are considerably in excess of those a year ago. For the week there has been a fair trade, broken up some by unfavorable weather conditions. Collections are rather poor.

Minneapolis, March 6.—Dry goods, hats, shoes, hardware and implements report a fair volume of business, while the demand for staples, such as groceries, etc., is very satisfactory.

Duluth, March 6.—Jobbing trade is quiet. Collections are unchanged. Money is close and in little demand. The flour trade is quiet. The lumber trade is preparing for spring opening, with better prospects. The logging season has been good. Wheat charters for shipment on opening of navigation have been made this week at 3c., which is favorable.

Omaha, March 6.—Trade still shows improvement in some lines. Corn is moving quite freely, and collections are above the average.

Sioux Falls, March 6.—Wholesale trade is fair for the season, with good prospects; retail quiet.

Southern Cities.

Charleston, March 6.—Business in all lines is about the same. Little or no improvement is shown in collections.

Savannah, March 6.—Trade among jobbers is fair, but reported by the retail dealers as quiet. Collections are coming in fairly well. Naval stores market is active, with rosins advancing and spirits turpentine slightly on the wane. Shipments are heavier than receipts.

Atlanta, March 6.—The state of trade and collections remain about the same as last week.

Augusta, March 6.—All lines of trade are quiet; demand not active. Collections fair.

Jacksonville, March 6—Business is better than for some time. Collections also show considerable improvement.

Birmingham, March 6.—Trade is quiet.

Chattanooga, March 6.—The general feeling has not improved during the week. Groceries are rather dull. No special complaint is made as to collections.

Memphis, March 6.—General trade shows no change. Collections are fair.

Nashville, March 6.—The week's business is rather more quiet. Country merchants have provided main supplies for early needs. Collections continue fair from country sections.

New Orleans, March 6.—Jobbing trade is fair, without special activity. Sugar is quiet and firm. Rice is sluggish. Cotton is fairly active at the decline. Local securities are well maintained.

Galveston, March 6.—Trade is quiet and collections are unsatisfactory.

Pacific Coast.

San Francisco, March 6.—Commercial lines are dull, affected by the severe weather. Produce is in good demand. The frost and snows of the beginning of the month did but little damage. The warm rains now falling will do much good. Collections are slow.

Portland, March 6.—The weather has been much colder than usual in Portland the past week, causing a slight decline in the retail trade. Wholesale houses report business sluggish. The Oregon Railway & Navigation Company has revised its wheat rates between Portland and eastern Oregon and Washington points, to the advantage of the farmers. Collections are not as satisfactory as they were a week ago.

Seattle, March 6.—Business has improved this week. Heavy frosts have done some damage to fruit crops.

Tacoma, March 6.—February exports aggregate in value $914,000, which is the largest monthly business in history of the port. Collections are better and local trade is improving, though temporarily interrupted by cold weather.

Canada.

Toronto, March 6.—Wholesale trade shows little change this week, but there is a more encouraging outlook. Payments this month are fair, some merchants reporting them better than they had expected.

Montreal, March 6.—Millinery openings, the chief feature, are well attended and sales are slightly larger than last year. Considerable amounts matured on March 4. Renewals were quite as large as last year, but the trade report payments about up to the average. The conclusion arrived at is that about 60 per cent. was taken up. Country roads are badly blocked and trade is somewhat restricted. It is expected that the worst is over and that a gradual improvement will soon be felt.

Halifax, March 6.—Trade shows little or no improvement. Roads in the country are bad, and the movement in produce is curtailed. Reports from New Brunswick state that general business is quiet, though it has been an exceptionally favorable winter for lumbermen. The cut will be very large, and prospects for the summer are encouraging. Shipments of lumber to the United States are light. The British market continues satisfactory for shippers. The potato market is overstocked.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

Distilling and Cattle Feeding Company

REORGANIZATION.

To holders of Certificates of the Manhattan Trust Company issued under the plan of reorganization of the Distilling and Cattle Feeding Company:

During the progress of the reorganization it has been suggested to the Reorganization Committee by parties in interest that the new corporation should be placed in position to control the distribution of its own product through a distributing company.

The Committee has expressed the opinion that a full opportunity to participate in the stock of such distributing company should be offered to the holders of the certificates of the MANHATTAN TRUST COMPANY, issued under the plan of reorganization. This view having been concurred in by the parties who have organized the distributing company, your attention is called to the following announcement.

RICHARD B. HARTSHORNE,
JOHN I. WATERBURY,
FREDERICK M. LOCKWOOD,
JULES S. BACHE,
WILLIAM E. HUTTON,

Counsel.

NEW YORK, February 12th, 1896.

OFFICE OF

AMERICAN SPIRITS MANUFACTURING COMPANY,

Mills Building.
NEW YORK, February 12th, 1896.

To holders of Certificates of the Manhattan Trust Company issued under the plan of reorganization of the Distilling and Cattle Feeding Company:

One of the first steps following the organization of the AMERICAN SPIRITS MANUFACTURING COMPANY has been to bring about the formation of a distributing company capable of handling, if necessary, its entire product.

Such corporation, known as the SPIRITS DISTRIBUTING COMPANY, has been organized under the laws of the State of New Jersey with a capital stock as follows:

First Preferred Cumulative 7 per cent. stock	$2,100,000
Second Preferred Non-cumulative 6 per cent. stock	1,575,000
Common stock	3,675,000
Total	$7,350,000

The entire issue of common stock and one share of the second preferred will be owned by the AMERICAN SPIRITS MANUFACTURING COMPANY.

Holders of MANHATTAN TRUST COMPANY'S D. & C. F. Co. certificates are offered the option to subscribe at par for the first preferred stock of the Distributing Company to the extent of six per cent. of the par value of their holdings or any part of such holdings; receiving in addition fifty per cent. of the amount of their subscription in second preferred stock.

For the convenience of certificate holders the Manhattan Trust Company has consented to act as depositary, and to ascertain such holders the transfer books of certificates for Distilling and Cattle Feeding Company's stock will close Monday, February 24th, 1896, at 3 P. M., and open Wednesday, February 26th, 1896, at 10 A. M.

Blank forms of subscription can be obtained upon application to the MANHATTAN TRUST COMPANY, Wall st., corner of Nassau, New York. *Subscriptions must be delivered at the office of the Manhattan Trust Company not later than 12 M. on Saturday, March 7th, 1896, together with check for the first instalment of 15 per cent.*

Second instalment, 15 per cent., payable on March 21st, 1896.

Third and fourth instalments of 15 per cent. each, payable respectively as called, on notice by mail of not less than 15 days to the registered holders of the subscription receipts and at intervals of not less than 15 days.

It is not at present intended to call the remaining four instalments of 10 per cent. each. That amount is designed to provide for the possible extension of the business of the Distributing Company into territory other than that now contemplated, or for future requirements.

Temporary receipts will be issued by the Manhattan Trust Company, upon which will be endorsed payment of each instalment.

Upon payment of the fourth instalment of 15 per cent. and surrender of the temporary receipt, subscribers will receive the certificates of first preferred stock 60 per cent. paid together with the second preferred stock to which they will be entitled.

The privilege now offered to holders of Manhattan Trust Company's D. & C. F. Co. Certificates has been underwritten by a syndicate.

Application to list the stock of the Distributing Company on the New York Stock Exchange will be made immediately.

In consequence of the formation of the SPIRITS DISTRIBUTING COMPANY, THE AMERICAN SPIRITS MANUFACTURING COMPANY has been enabled to make advantageous arrangements for the distribution of its product in the territory east of Buffalo and Pittsburg at a cost of distribution far below any hitherto paid. The AMERICAN SPIRITS MANUFACTURING COMPANY will control the distribution of its product west of Buffalo and Pittsburg, through the ownership of a majority of the stock of the Spirits Distributing Company.

Under its contract with the Manufacturing Company, the Distributing Company will take the product of the Shufeldt Distillery at Chicago and the St. Paul Distillery at St. Paul; and, if required, will also take the product of ten thousand additional bushels daily for distribution in the East. This product is taken by the Distributing Company at market price, and is paid for in cash, the Distributing Company agreeing to employ in its business a minimum of $1,000,000 cash. The Manufacturing Company leases to the Distributing Company for the term of 999 years the H. H. Shufeldt & Co. Distributing Plant with all its appurtenances and machinery, and will, pursuant to a written contract, make a fixed annual payment to the Distributing Company of $120,000, payable quarterly, beginning May, 1896. In the event of the Distributing Company extending its business as above provided, and calling up the remaining instalments of 10 per cent. each on the First Preferred Stock, the Manufacturing Company will, as provided in such contract, make a further annual payment of $20,000 for each additional instalment of 10 per cent. paid in, the total annual payment being limited to $200,000. The amount thus to be received annually by the SPIRITS DISTRIBUTING COMPANY will be sufficient for the dividend of 7 per cent. upon the instalments paid in on its First Preferred Stock.

THE AMERICAN SPIRITS MANUFACTURING COMPANY, under the arrangement described above, controls an independent and powerful distributing agent to handle its product without the expense heretofore paid for the service, and practically without cost, as the estimated earnings of the Distributing Company from its general business, in addition to the fixed annual payment from the Manufacturing Company above referred to, warrant the belief that they will be sufficient to pay dividends upon the Common Stock held by the Manufacturing Company.

The opportunity to participate in the profits of the distributing business is now offered to the stockholders of the American Spirits Manufacturing Company.

American Spirits Manufacturing Company.
By S. M. RICE, President.

By order of the Board of Directors.

Erie Reorganization.

23 WALL STREET,
NEW YORK, March 3, 1896.

To all Holders of our Reorganization Certificates for Securities of the New York, Lake Erie and Western Railroad Company:

We shall be prepared, on and after March 4, to receive our Reorganization Certificates for conversion into securities, as provided in the plan of reorganization.

Each holder must deliver to us all Reorganization Certificates held by him, for the various old securities, which will be scheduled and consolidated by us. One hundred schedules will be taken in by us on each business day, and the new securities, in exchange, will be delivered on the following day.

All Reorganization Certificates (unless "to bearer") MUST BE ENDORSED IN BLANK; and, if stock is desired in any name other than that appearing on the face of the Reorganization Certificate, its assignment must be acknowledged before a notary public or attested by some person satisfactory to us.

The new coupon bonds are for $1,000 each. Persons entitled to fractions of a bond or of a share may either sell the fractions to us, or we will sell them such amounts as may be necessary to entitle them to an entire bond or an entire share.

Holders transmitting Reorganization Certificates by mail, will please indicate whether they wish to sell or buy such fractions, and whether they wish the new securities sent by registered mail or by express at their expense.

FORTY-NINTH

Annual Report

OF THE

PENNSYLVANIA Railroad Company.

OFFICE OF THE PENNSYLVANIA RAILROAD COMPANY,

PHILADELPHIA, March 3d, 1896.

The Board of Directors submit herewith a synopsis of their Forty-ninth Annual Report, for the year 1895:

The gross earnings of the three grand divisions east of Pittsburgh and Erie, embracing the Main Line, United Railroads of New Jersey, and Philadelphia and Erie Railroad and Branches, were		$64,627,178 72
Expenses		44,510,656 31
Net earnings		$20,116,522 41
To which add:		
Interest from investments	$4,611,087 40	
Rental of equipment, &c.	452,372 98	
		5,063,460 38
Gross income		$25,179,982 79
Deduct:		
Rentals, leased and operated roads	$8,896,061 39	
Interest on funded debt	4,163,775 40	
Interest on mortgages and ground rents, car trusts, taxes, &c.	1,589,713 62	
		14,649,550 41
Net income		$10,530,432 38
From this amount the following deductions have been made:		
Payments account Sinking and Trust Funds, and guaranty of interest on Allegheny Valley Railway bonds	$568,711 87	
Extraordinary renewals, &c.	1,327,250 58	
		1,895,962 45
Balance after above payments		$8,634,469 93
Dividends of 5 per cent.		6,465,011 25
Amount transferred to credit of profit and loss for the year 1895		$2,169,458 68
Previous amount to credit		23,155,632 24
		$25,325,090 92
Deduct amount of interest on funded debt accrued to January 1st, 1896, but not yet matured, less amount due from investments on same date	$826,537 11	
Amount charged off in reduction of value of securities and settlement of sundry accounts	945,083 95	
		1,771,621 06
Balance to credit of profit and loss December 31st, 1895		$23,553,469 86

The preceding statements show that after having provided for all the fixed liabilities of your Company, and expending over $1,300,000 in improving its property, there remained the sum of $8,634,469.93, out of which were declared dividends of five per cent., leaving $2,169,458.68 to be carried to the credit of profit and loss account. In view of the fact that the low rates prevailing on both passenger and freight traffic for the past few years continued during 1895, it would appear that under any reasonable conditions your property will make fair returns to its shareholders.

It had not previously been the custom in stating your accounts at the end of the year to charge up the amount of accrued interest on bonds and other obligations of your Company to the 1st of January following, or to take credit for the amount of income that matured upon securities held by your Company on that date; but your Board has now deemed it proper that both these amounts should be taken into your accounts for the year. It will, therefore, be seen that there has been debited to profit and loss the sum of $826,537.11, being the difference between these two amounts, in addition to which a reduction has been made in the value of some of the securities held by your Company, and in settlement of old accounts, making a total charge to profit and loss of $1,771,621.06, and leaving $23,553,469.86 to the credit of that account.

SINKING FUNDS.

Under the provisions of the consolidated mortgage of the Company $324,780 were set apart on the first day of July last, out of the net income, as a sinking fund for the redemption of the outstanding bonds secured by that mortgage. None of the series of bonds to which the Sinking Fund was applicable could be purchased under the terms of the Trust, and the amount was placed to the credit of the trustees for investment under the terms of the mortgage. There are $4,307,956.91 in securities and cash in the fund for the redemption of these bonds.

The trustees of the sinking fund for the redemption of the Trust certificates issued for the purchase of the shares of the capital stock of the Philadelphia, Wilmington and Baltimore Railroad Company were not able to purchase any of these certificates during the past year. The total amount so purchased and cancelled to December 31st, 1895, is, therefore, $2,298,000, leaving outstanding $7,702,000.

The trustees of the sinking fund for the redemption of the four and one-half per cent. Collateral Trust Loan were not able to obtain any of these securities during the year at the limit fixed in the agreement. The amount of this loan outstanding December 31st, 1895, is $9,900,000.

Under the provisions of the four per cent. Equipment Trust Gold Loan, there was paid to the trustee during 1895, for the sinking fund, the sum of $136,400. The trustee was unable to obtain any of the bonds at the price fixed in the lease, and in accordance with the terms thereof the whole amount has been invested in additional equipment.

FUNDED DEBT.

The amount of funded debt, including mortgages on real estate and ground-rents, at the close of the year was $87,658,910.72, being an increase of $4,902,674.73, accounted for as follows:

Consolidated mortgage 3½ per cent. sterling bonds issued, £1,000,000, equivalent to	$4,850,000 00
Increase in mortgages and ground-rents	52,674 73
Total	$4,902,674 73

CAPITAL STOCK.

The amount of capital stock outstanding at the close of the year was $129,301,550, an increase of $3350, due to the conversion of that amount of the scrip dividend declared in May, 1893.

SECURITIES OF OTHER CORPORATIONS.

The entire cost of the securities of other corporations now held by your Company is $118,035,905.87. The direct revenue received therefrom was $4,353,987.10, the decrease as compared with 1894 being due to the generally reduced income from investments. Notwithstanding this, these securities continued to produce nearly four per cent. upon their cost, and more than provided for the interest on your funded debt.

CAR TRUSTS.

No further issues of these securities were made during the year, and no series thereof matured.

The total number of cars provided under the Car-trust system is 57,997.

Total amount of certificates issued therefor	$30,644,000 00
Amount redeemed	25,112,000 00
Balance of certificates outstanding December 31st, 1895	$5,532,000 00

The amount expended upon the Main Line and branches, and charged to capital account during the year, was $607,858.95, the expenditure being entirely for additional freight cars and real estate, all other extraordinary outlay on that portion of your property having, as already stated, been charged against the general income of the year. The amount expended in construction on branch and auxiliary lines was $1,936,741.23. The principal items of this expenditure were the extension of double tracks on the Pittsburgh, Virginia and Charleston Railway, made necessary by the development of the manufacturing industries on that line; the extension of the Fairhill Railroad, a short branch in the northern part of the city of Philadelphia, built for the purpose of furnishing increased facilities for local freight traffic; and the construction of what is generally known as the Delaware River Bridge, near Frankford, Philadelphia, the purpose of which was fully explained in the last annual report. This latter undertaking is now rapidly approaching completion, and will be open for business during the coming summer. The work of elevating the tracks in the city of Elizabeth, New Jersey, with the exception of one bridge, is completed, and the policy of eliminating grade crossings by the construction of overhead or undergrade bridges is being continued wherever it can be done with a due regard for economy, and the local authorities properly co-operate toward reaching this result.

At the close of the year your Board deemed it advisable to place under contract several extensive improvements upon your Main Line, among which may be noted the straightening of the line at Kinzer's, on the Philadelphia Division, covering a distance of about five miles; the revision of the Harrisburg, Portsmouth, Mt. Joy and Lancaster Railroad, in the borough of Mt. Joy, whereby all the grade crossings at that point will be eliminated, together with an improvement of the alignment of the same road a few miles further west; and also several minor changes in the valley of the Juniata, on the Middle Division. The two most notable changes on the Pittsburgh Division are first, on that portion of your road on the western slope of the Allegheny Mountains, which virtually amounts to a rebuilding of more than four miles of road at an estimated cost of $700,000, whereby the present sharp curvature between Lilly's and Portage will be eliminated and a practically straight line substituted therefor; and second, a revision of the line at a point near Greensburg, which involves the construction of a new tunnel nearly half a mile in length, and will result in the saving of a considerable distance as well as a material decrease in curvature. These improvements will require an outlay of nearly $2,000,000 and will be actively prosecuted during the present year, should such a course be warranted by the general condition of the manufacturing and commercial interests. The returning prosperity of the industries of the country having made advisable an increase in your equipment, contracts have been entered into for the construction of about eight thousand cars for your system, some of which have been delivered, and the remainder will be put in service during the present year.

The number of tons of freight moved on the three grand divisions east of Pittsburgh and Erie in 1895 was 78,259,526, an increase of 13,581,832, or 21.00 per cent.; the number of passengers was 37,452,437, a decrease of 1,143,723, or 2.96

per cent. The average distance traveled by each passenger in 1895 was 19 miles, an increase of one mile.

The other large Railroad Companies east of Pittsburgh and Erie in which your Company is interested show increased earnings due to the general business improvement throughout the year. Detailed statements of their operations will be found in their respective annual reports, as well as in the pamphlet report of your Company. The total amount of coal mined during the year by the four coal companies, in which you are interested, was 2,208,234 tons, a decrease of 89,491 tons.

LINES WEST OF PITTSBURGH.

On the lines west of Pittsburgh operated by the Pennsylvania Company and the Pittsburgh, Cincinnati, Chicago and St. Louis Railway Company the result was as follows:

	1895.
Earnings of Pennsylvania Co	$20,888,964 08
Expenses	12,586,335 21
Leaving net earnings	$8,302,628 87
Rental, interest, &c	7,383,364 04
Net profit on Penna. Co.'s lines	$919,264 83
Earnings of Pittsburgh, Cincinnati, Chicago and St. Louis Railway	$18,135,126 11
Expenses	13,166,364 94
Leaving net earnings	$4,968,761 17
Rental, interest, &c	3,678,075 33
Net profit on Pittsburgh, Cincinnati, Chicago and St. Louis Railway Company's lines	$1,290,685 84
Net profit on lines directly operated west of Pittsburgh	$2,209,950 67

The other lines west of Pittsburgh, on account of which your Company has assumed direct obligations, or in which it is largely interested through ownership of securities, but which are operated through their own organizations, are, the Cincinnati and Muskingum Valley Railway; Waynesburg and Washington Railroad; Pittsburgh, Chartiers and Youghiogheny Railway; Cleveland and Marietta Railway; Grand Rapids and Indiana Railroad, and roads operated through its organization; Toledo, Peoria and Western Railway; and the Terre Haute and Indianapolis Railroad, and roads operated through its organization.

The aggregate gross earnings of these roads were	$8,958,384 51
Expenses	7,401,132 59
Net earnings	$1,557,251 92
Deduct rental, interest, &c	1,868,170 31
Loss	$310,918 39
Of this loss the Pennsylvania Railroad is responsible for	$222,084 57
Which deducted from the profit shown above	2,209,950 67
Leaves a net profit on all lines west of Pittsburgh for 1895	$1,987,866 10

These lines show a marked improvement as compared with 1894, each of the two systems west of Pittsburgh showing a net surplus, after meeting all liabilities, of about one million of dollars. This was largely due on the Northwestern system to the prosperous condition of the iron industry. The tonnage and mileage were greater than for any previous year in their history.

The amount expended on account of construction, equipment, and real estate during 1895 on the lines west of Pittsburgh was $2,053,657.91.

The larger portion of the expenditures for capital account on these lines was for additional equipment, to meet the demands of the traffic and provide further facilities for the through business. The main items of construction were the widening for double track of the tunnels on the Pittsburgh Division of the Pittsburgh, Cincinnati, Chicago and St. Louis Railway; the increase of double track on the Western Division of the Pittsburgh, Fort Wayne and Chicago Railway; and the revision of the line of the Cleveland and Marietta Railway.

The Newport and Cincinnati Bridge Company also expended a large sum on the rebuilding and improvement of the bridge over the Ohio River at Cincinnati. The masonry is entirely finished and the approaches are under construction, and the new bridge, which will carry not only the railway, but also furnish facilities for trolley and wagon traffic, and for foot passengers, will be completed during the present year.

FUNDED DEBT.

In view of the fact that a large amount of the bonds upon your western lines bearing seven per cent. interest was approaching maturity, it was deemed wise to take advantage of the exceptionally favorable conditions prevailing in the money market during the past year, by selling $3,000,000 of the consolidated mortgage bonds of the Pittsburgh, Cincinnati, Chicago and St. Louis Railway Company held in the treasury of the Pennsylvania Company, and use the proceeds thereof for construction and equipment purposes, and in anticipating, as far as practicable, the payment of the obligations referred to. These bonds were issued as of November 1st, 1895, bearing four per cent. interest, maturing fifty years from date, and are guaranteed, principal and interest, by the Pennsylvania Company.

The number of tons of freight moved on the lines west of Pittsburgh was 55,155,249, an increase of 11,235,771. The number of passengers was 17,111,177, an increase of 332,361.

The gross earnings of all lines east and west of Pittsburgh for the year were $132,720,811.66, operating expenses, $92,859,286.66, and net earnings, $39,861,525.00. There were 160,410,144 tons of freight moved and 75,052,479 passengers carried.

GENERAL REMARKS.

There has been paid the Managers of the Trust created October 9th, 1878, by the Company, to December 31st, 1895, the sum of $4,495,190.91. The total income therefrom has been $5,549,955.07, and on that date securities amounting at par to $9,938,265 were held in the Trust, yielding an interest of 5.07 per cent. for the year. There was appropriated to the Trust for the year 1895 the sum of $87,216.87.

This Trust, in pursuance of the purpose for which it was created, has purchased from time to time a portion of the bonds of the American Steamship Company, which mature October 1st, 1896, and the maturing coupons on the entire issue at the regular interest periods. As there remains no property of that Company to provide for the payment of these obligations, they will necessarily have to be charged against the principal of the fund. This same policy is being pursued as to the interest on the bonds of the Pennsylvania Canal Company, which is also guaranteed by your Company. The payment of these large and practically unsecured obligations is the first direct benefit accruing from the creation of the Trust, as they would otherwise have to be met out of your current revenue.

The assets of the Insurance Fund on hand at the end of the year were $3,779,701.15, being an increase of $310,891.78 over the previous year.

Interest in the Employés' Relief Fund continues to increase, the membership at the close of the year, 36,432, being the largest since its establishment. During the year the members contributed $641,849.12, while your Company and its affiliated lines, in addition to the payment of $98,658.53 for operating expenses, also contributed $36,632.55 for extra benefits to members whose disability had continued for more than fifty-two weeks, and who were, therefore, no longer entitled to regular benefits from the Fund. The total receipts of the Fund, including interest and other small items, were $790,174.62, which, with the balance on hand at the beginning of the year, $230,600.23, made an aggregate of $1,020,774.85, out of which $254,298.64 were distributed as death benefits, being an average in each case of about $575, and $337,197.33, in cases of disability arising from sickness and accident. After meeting all its obligations for the year, and providing for unadjusted claims, a balance of $247,498.02 remained to the credit of the Fund.

The number of employés who availed themselves of the benefits of the Employés' Saving Fund continued to increase, there being 4513 at the end of the year, as against 4112 in 1894. The amount received from depositors during 1895 was $497,591, and the balance in the Fund, at the close of the year, was $1,578,884.37. Of this amount, $1,500,000 have been invested in four per cent. securities.

On account of the favorable conditions prevailing in the money market, already referred to, and the near maturity of a large amount of bonds upon lines in which you are largely interested, it was thought wise to sell £1,000,000 of your consolidated mortgage bonds, dated 1st July, 1895, bearing three and one-half per cent. interest, and maturing fifty years from date, and thus secure the funds to meet these obligations for construction and equipment purposes. It is a gratifying evidence of the high credit enjoyed by your Company that it was able to place these bonds at a lower rate of interest than that borne by any security which it has heretofore offered in the market. Your Company also joined the Allegheny Valley Railway Company in a sale of $5,000,000 of its four per cent. general mortgage bonds, of which $4,000,000 were used by that Company to provide for the payment of a like amount of its seven and three-tenths per cent. bonds, maturing March 1st, 1896, and the proceeds of the remaining $1,000,000 which were owned by your Company, were applied to your own capital requirements. By the funding of the seven and three-tenths per cent. bonds referred to, the Allegheny Valley Railway Company secures a reduction of $132,000 in its annual interest charges. In accordance with the agreement of reorganization of that property, your Company guaranteed the payment of these bonds, principal and interest.

In pursuance of a policy which had received the careful consideration of your Board, the London Joint Stock Bank, Limited, with which your Company has for many years maintained intimate business relations, was appointed your financial agent in London, on March 27th, 1895. Through the establishment of this agency the English shareholders now receive their dividends on the same date as the American shareholders, and at their full equivalent in sterling.

The continued unsatisfactory condition of the transportation interests of the country has been fully recognized, not only by those having the management thereof, but by the general public. After careful consideration of the entire subject, an organization known as the Joint Traffic Association has been formed, in the belief that, through its instrumentality, not only could substantial economies be enforced in the administration of the service, but stability and uniformity of rates secured to the public, and the violent fluctuations prevented which tend alike to disturbance of values and unjust discrimination. While sufficient time has not elapsed to thoroughly test its working, yet enough has been accomplished in the correction of evils to demonstrate its value, not only to the railroads but to the public, and to justify the belief that to it, or some like organization, the Interstate Commerce Commission must look for the potent agency to enable it to enforce the provisions and secure the results sought to be accomplished by the passage of the Interstate Commerce Act. Mr. David S. Gray, for many years manager of the Union Line, has been appointed representative of this Company on the Board of Managers, which has the active administration of the affairs of the association.

Your Board have again to record the loss of one of their most valued associates, Mr. Henry H. Houston, who died on June 21st, 1895. Mr. Houston's intimate connection with the freight organization of your Company, covering a period of thirty years, his invaluable labors in that department, and his able and conscientious discharge of the duties of a director of your Company and its allied corporations, make it especially appropriate that the Board should express their sense of the deep loss sustained by the Company, no less than by those who had been his personal associates through so many years.

Mr. C. Stuart Patterson was elected a member of the Board to succeed Mr. Houston, thus creating a vacancy in the auditorship of the Trust Fund of October 9th, 1878, which has been filled by the selection of Mr. John B. Gest, one of your shareholders.

Mr. Edmund Smith, formerly Vice-President of the Company, who had rendered faithful and honorable services to it for more than forty-one years, until his resignation June 30th, 1888, died on the 31st of July last. His long connection with and devotion to the interests of the Company make it fitting that this tribute should be paid to his memory.

Mr. George V. Massey was appointed Assistant General Solicitor August 1st, 1895, to fill the vacancy heretofore caused by the promotion of Hon. James A. Logan. Mr. John G. Johnson was appointed Special Solicitor, to take effect February 1st, 1895.

The General Balance-Sheet of the Company is hereto appended.

The Board renew their acknowledgments to the officers and employés for the fidelity and efficiency with which they have discharged their duties during the past year.

By order of the Board.

G. B. ROBERTS, *President.*

Dr. GENERAL BALANCE-SHEET.

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

Report of the Examining Committee

Office of The Mutual Life Insurance Company of New York

February 11, 1896

At a meeting of the Board of Trustees of this Company, held on the 18th day of December last, the undersigned were appointed a Committee to examine the annual statement for the year ending December 31, 1895, and to verify the same by comparison with the assets of the Company.

The Committee have carefully performed the duty assigned to them, and hereby certify that the statement is in all particulars correct and that the assets specified therein are in possession of the Company.

In making this certificate the Committee bear testimony to the high character of the investments of the Company and express their approval of the system, order, and accuracy with which the accounts and vouchers have been kept, and the business in general transacted.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

Berlin Office, 23 Charlotten Strasse.
London Office, 137 Cheapside, E. C.
Melbourne Office, 231 Flinders Lane.
Paris Office, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE;
SINGLE COPIES 10 CENTS.

Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 14, 1896.

The recent bond sale by the United States government may be regarded as practically completed, as less than $11,000,000 of the amount of gold due from the successful bidders for the issue remains to be paid into the Treasury. The net Treasury gold reserve now amounts to about $126,000,000, though some $21,000,000 received in payment for bonds remains in the special depositary banks, and of this latter amount some $9,000,000 has not been taken up on the Treasury's books. Added to the official reserve, this would make the net gold held by the government about $136,000,000, or $94,000,000 more than the minimum point touched in the first days of February before the payments for the bonds began. There are no indications of any large withdrawals of gold from the Treasury, either to provide for the small balance of the bonds still unpaid or to meet gold contracts made by the bond subscribers at the commencement of the operation. Under existing circumstances, and especially as no gold exports are in sight, there is a feeling that the Treasury can maintain its free gold reserve at about the present level for some months to come.

St. Louis has been fixed upon as the place, and September 22, 23 and 24 as the dates, for the holding of the next convention of the American Bankers' Association. These arrangements were arrived at as the result of a meeting of the executive council of the association held at New York this week. One of the topics discussed at the meeting was a proposition to put the protective committee of the association on a permanent basis, and a plan to bring this end about will be formulated by the protective committees of this year and last. The council left no doubt of its attitude on the currency question by adopting unanimously a resolution declaring unequivocally in favor of the maintenance of the existing gold standard of value, and recommending all bankers and the customers of all banks to exercise all of their influence as citizens in their various states to select delegates to the political conventions of both the great parties, who will declare unequivocally in favor of the maintenance of the existing gold standard of value.

Something has already been done under the auspices of the national government to promote the cause of road improvement, but an effort is being made to extend its influence in the same direction. During the week the House Committee on Agriculture has given a hearing on a bill, recently introduced, to create a special commission on highways, whose purpose is to inquire generally how the government may further promote the improvement of highways and the best methods of securing a scientific location of highways on the public domain; the employment of the Geological Survey in the discovery of road materials and the free testing of these, and the construction of modern roads and instruction in road-making at agricultural colleges and experiment stations. So far the expressions of opinion received by the committee have been strongly in favor of the bill, which, its advocates say, contemplates no great expense and no increase of salaries, and the life of the commission proposed by which is limited in time.

Succeeding heads of the Post Office Department, one after another, have declared that the chief cause of the yearly deficit in the revenues of the department is the gross abuse of the provisions relating to second-class rates of postage. In the last annual report Postmaster-General Wilson declared that two-thirds in weight of all the matter carried in the mails is, under existing laws and classifications, carried as second-class matter, at the rate of 1c. per pound, when it is not actually carried postage free. With the view of remedying to some extent the abuses which have grown up in relation to this branch of the service, Representative Loud, of California, has introduced a bill which defines the kinds of mail matter to be carried at second-class rates. The definition is contained in the fourth section of the act, which provides that in order to entitle a publication to admission to second-class rates it must be regularly issued at stated intervals as frequently as four times a year, from a known office of publication which shall be shown by the publication itself; must bear a date of issue and be numbered consecutively, and must be formed of printed paper without any substantial binding, such as distinguishes printed books for preservation.

Under the provisions of the bill, publications purporting to be issued periodically and to subscribers, but which are merely books or reprints of books, are excluded from treatment as second-class matter. The measure has been criticised on account of this provision, but it is difficult to see why, for these publications do not come within the spirit of the law admitting bona fide periodicals to second-class rates. Desirable literature may be circulated in this way, but it is at the expense of the government, which certainly was not intended to bear the cost of this distribution or the bulk of it. The rate of postage upon "returns" of unsold periodical publications is increased by the bill from one to four cents a pound, and for this provision also the bill is criticised, but with little show of reason, for the government ought not to be forced into the express business at a loss for the benefit of people who overestimate the salability of their publications. Taken as a whole, the measure seems to be a useful one, though discussion may suggest improvement in matters of detail. Perhaps further consideration might prompt a modification at least of the provision requiring publishers and others whose publications shall be admitted as mail matter of the second class, before depositing such mail matter in the post office, to separate the same into United States mail sacks or bundles by states, cities, towns and counties, as the Postmaster-General may direct. This provision seems to contain possibilities of vexatiousness which ought to be avoided.

From time to time suggestions have been brought forward for the creation of a department of commerce and manufactures, and criticism of the plan in its more general bearings meets with some difficulty, in view of the existence of the departments of agriculture and labor, the former of which was not long ago raised to Cabinet rank. The latest proposition of this kind is found in a bill introduced by Senator Frye, of Maine, which provides for the transfer to the department from the Treasury of the Life Saving Service, the Lighthouse Board, the Marine Hospital Service, the Bureau of Steamboat Inspection, the Bureau of Navigation, the Coast and Geodetic Survey, and the Bureau of Statistics with the Bureau of Statistics of the State Department, the two bureaus of statistics to be consolidated into one. The bill also provides for the transfer of the consular service from the jurisdiction of the State Department to the proposed new department, and gives the department general jurisdiction over the foreign and internal commerce of the United States, except in so far as relates to the collection of the revenue and the administration of the customs and internal revenue laws. Under the bill the new department is further to have jurisdiction over all matters relating to the manufacturing interests of the United States, including the extension of foreign markets for the same, and the increase of commerce and trade facilities with foreign countries. The new secretary is also to perform all the duties now incumbent upon the Secretary of the Treasury in relation to the trade and commerce of the United States, whether upon land or water. It goes without saying that the bill will not lack supporters, but its early passage by the present Congress is scarcely to be looked for.

It appears from the annual report of the New York Superintendent of Insurance that the condition of the various fire and marine insurance companies transacting business in the state showed material improvement during the year 1895. The assets of these companies increased over $9,000,000 in 1895, as against an increase of $2,000,000 in 1894 over 1893, while the increase in liabilities last year amounted to but little over $1,000,000. With only $700,000 less premiums received in 1895 than in 1894, losses diminished over $5,000,000. The superintendent refers to an amendment he has outlined to the portion of the fire insurance law relating to the incorporation of mutual companies, which has been introduced in the legislature, with a view of enabling the superintendent of insurance to exercise an authority, not now given him, to withold a corporation certificate from this class of proposed corporations whenever it is manifest to him that reasonable doubt surrounds the honest intention of the incorporators to organize a mutual fire insurance company for the benefit primarily of its members, and not for the purpose of placing commissions in the pockets of agents and brokers. The report contains some vigorous criticism of the methods of certain insurance organizations, and an account of the steps taken to obtain a judicial interpretation of that portion of the insurance law which exempts certain individual underwriters from its operation.

Italy has quieted down during the week. A new ministry has been installed with the Marquis de Rudini at its head and Signor Sermoneta as the Minister for Foreign Affairs. The fears that at first gained ground that the existence of the Triple Alliance was threatened appear to have subsided, and it is understood that a public manifestation intended to remove any vestige of that impression is in contemplation. It was at first supposed that the new ministry would prosecute the Abyssinian war with vigor, but later accounts appear to indicate that negotiations looking to a peaceful solution of the difficulty are under way.

NORTHERN PACIFIC REORGANIZATION.

The prolonged irritation, not to say abuse, of the Northern Pacific Railway through its being in the hands of several distinct and conflicting receiverships seems not to have appealed sufficiently to the sense of the legal tribunals before which that view of the case has been presented to rescue that line from its predicament.

It will be recalled that a proposition was made in London in May a year ago, in the interest of the Great Northern Railway, to guarantee the bonds of the Northern Pacific, as reorganized, to the amount of $175,000,000, with interest and rentals, calling for about $6,830,000 per annum. At that time net earnings of the Northern Pacific for the previous year, applicable to rentals, interest and sinking funds, as included in the Great Northern proposal, had amounted to $4,497,195. The difference between the Northern Pacific income and the guaranteed minimum income was so marked, and the additional guarantee of the principal of the bonds so favorable, that the parties in interest, in order to secure the ample capital offered and consequent restored credit, laid aside for the time pending plans for independent reorganization, to examine and test the Great Northern proposition. The question of the legality of the proposal was first considered, and early in June, 1895, it was found the plan would be impracticable without additional legislation.

In order to understand the difficulties surrounding independent reorganization, which was then resumed, the status of receiverships appointed since July, 1895, must be made plain. In August, 1895, the United States Court for the district comprising the state of Washington granted an application calling for the removal of the three receivers originally appointed by Judge Jenkins, of Wisconsin, for the reason, among others, that the Wisconsin court was not one of competent jurisdiction. This was in the face of the fact that for more than two years the original and primary jurisdiction of the Wisconsin court had been submitted to unchallenged. After that decision the first named court removed the Wisconsin receivers, assumed primary jurisdiction and made its own appointments, which led to further resignations, dismissals and appointments by other courts. In this way the Northern Pacific property was divided between officials appointed by several United States circuit courts, three of which claimed primary jurisdiction.

Until recently the property of the company in New York to-day has been in charge of Messrs. Oakes, Payne and Rouse, the original Wisconsin receivers, confirmed by Judge Lacombe. Although they resigned last December, their resignations were not acted on until about the first of this month. The property of the company in Wisconsin, Minnesota and North Dakota, about 1,985 miles of railroad, is in charge of Receivers McHenry and Bigelow, also appointees of the Wisconsin court, confirmed by Judge Sanborn, of Minnesota. The property in Montana, including about 1,273 miles of railroad, is now in the exclusive charge of Receiver Burleigh. Until recently the receivers there were Messrs. Burleigh, Bonner and Mills, but the two latter have resigned. The property in Idaho, Washington and Oregon, including about 1,256 miles of railroad, is in the hands of Receiver Burleigh also, on appointment of Judge Hanford, of Washington, confirmed by Judges Gilbert, of Oregon, and Beatty, of Idaho. In the Province of Manitoba the interests of the company have continued until recently in charge of Messrs. Oakes, Payne and Rouse, originally appointed by Mr. Justice Killam, in the Court of Queen's Bench of Manitoba.

Not even the united efforts of trustees, bondholders, holders of receivers' certificates and stockholders of the company, together with their respective counsel, have been able to adjust this conflict of jurisdiction between the federal courts, the continuance of which cannot do else than material injury to the trust estate.

It has been the active endeavor of the reorganization committee to preserve intact this great railway property, with its terminals and branches, and, with this purpose in mind, successive advances have been made of $1,000,000 and of $4,900,000 to the receivership. But conflicting receiverships, with the increased expense, difference in policy, and conflict in accounts, tend only to unsettle the administration in nearly all departments of the road, which must, if continued, result in great loss of business and influence.

Such a situation, the result of conflict between United States courts, and not created by the bondholders, carries its own comment. It appears to be one in which the business interests of a great property are not regarded as superior to legal technicalities. As two United States judges on the line of the Northern Pacific had written opinions adverse to the primary jurisdiction of the Milwaukee court, the situation was presented to the Supreme Court of the United States at Washington.

Within a few weeks the Supreme Court justices assigned to the circuits in which the railroad property is located, by their joint action, settled the vital question of primacy by declaring

"That the Circuit Court for the Eastern District of Wisconsin *has jurisdiction to proceed to a decree of foreclosure which will bind the mortgagor company and the mortgaged property*, and ought therefore to be recognized by the circuit courts of every district along the line of the road as the court of primary jurisdiction; and

"That proceedings in the latter courts, while protecting the rights of local creditors, should be ancillary in their character and subordinate to the proceedings in the court of primary jurisdiction."

The two local United States judges in the Pacific circuit, who appointed Receiver Burleigh, have thus far avoided the full recognition of this order by refusing to substitute Receivers McHenry and Bigelow, appointed by the Wisconsin court of primary jurisdiction, in lieu of Receiver Burleigh, notwithstanding that the order of the justices of the United States Supreme Court for each of the circuits directed "*that the proceedings in the circuit courts of other districts will be ancillary in their character and in aid of the proceedings in this* (*Wisconsin*) *court of primary administration.*"

While the report of the Northern Pacific reorganization committee has not been made public, it is expected to be issued at a comparatively early day, and there appears to be a consensus of opinion that its recommendations will be supported by a syndicate of domestic and foreign bankers, with ample means at their disposal to carry out any plan proposed for the reëstablishment of this much abused property.

The earnings of the Northern Pacific have begun to show an important increase. For the month of January gross earnings of the Northern Pacific Railroad were $146,110 larger than in the corresponding month a year ago, and the operating expenses were $21,303 smaller. Net earnings increased in January this year over last $167,413, and other income increased $193,031, making a total increase of income in January, 1896, as compared with 1895 of $360,444. There was also a marked diminution of interest, rentals and taxes due January this year as compared with last, and the deficit, exclusive of charges not assumed by receivers, amounted to only $145,158 last month, compared with $492,126 in January a year ago. In view of this, it might be in the interest of the bondholders to further delay reorganization, yet in view of the existing unfortunate condition of the company, for which no other sufficient remedy is in sight, it is imperative that existing complications should be terminated by reorganizing and taking the company out of the hands of the several courts and receivers having charge of it as speedily as possible.

ANTI-OPTIONS AGAIN.

Notwithstanding the predominance of free coinage of silver, tariff and anti-tariff, the Venezuelan and Cuban questions and allied topics in Congress this session, it is of interest to bear in mind that the friends of anti-option legislation have not been idle.

While representatives and senators have been doing their best, or their worst, to introduce free coinage of silver at the ratio of 16 to 1, or to prevent it; to enact a more equitable tariff or one a little less so; while they have been stirring up public interest in the foreign relations of Venezuela and of Cuba to such an extent that jingoism and anti-jingoism have become terms in daily use—during all this the friends of a proposed measure which would practically prevent making contracts for future delivery of merchandise and products have not been asleep or idle.

This fight has been going on for a number of years, and among its battered but distinguished veterans are Norman J. Colman, once commissioner of agriculture; ex-Congressman Butterworth, of Ohio; ex-Congressman Hatch, of Missouri, and Senators Washburn, of Minnesota, and George, of Mississippi. Close behind them, bearing the banners of their propaganda, have marched C. Wood Davis, of Kansas, statistician-in-ordinary to the cause and a prominent dealer in grain at Chicago, who evidently believes in the potency of paradoxes.

It is a matter of easy recollection that all the preceding anti-option bills have come to naught. They met the united opposition of the commercial exchanges and chambers of commerce in the country, together with the opposing sentiment of others who had given the subject of contracts for future delivery, the law governing the same, and the practice of merchants making such contracts at the recognized exchanges, sufficient attention to enable them to appreciate the legitimacy of the foundation on which this business is built up, and the absolute necessity for it in this day of modern and complex trading.

It has been and still is impossible for many friends of anti-options bills to understand how any contracts to sell for future delivery can be legitimate if the clearing-house principle be employed in the settlement of such contracts. They persist, with almost an unwillingness to see the facts, in some instances, in classing what they must know are bucket-shops as commercial exchanges, and in aiming at the former a weapon which will tear down the regular, the legitimate exchanges of the country. Because the machinery of transactions for future delivery has not been at all times as perfect as it might be, and because it has in instances suffered from abuse, these warriors for the cause of old-fashioned methods of doing business propose to burn down the barn to get rid of the rats.

For a number of years past BRADSTREET'S, in common with other newspapers of the country, has followed in detail the movements, in Congress and out, of those who sought to prevent "bucket-shopping" in such a way as to practically prevent all trading for future delivery. It would hardly seem necessary to recapitulate the history of the campaigns in preceding congresses or the Waterloos they have met. Within the past week news has been received from Washington that the sub-committee of the House Agricultural Committee had voted adversely on the Hatch Anti-Option bill. This was regarded by members of exchanges as the end of the measure at this session. Since then the committee has voted to lay the bill on the table, which shelves it.

As in previous years, representatives of the New York, Chicago, New Orleans and other grain, cotton and produce exchanges have appeared before the House Agricultural Committee in opposition to this, the latest, anti-options bill. All the old straw was rethreshed and the same general results arrived at. It was explained to the committee, what most of them evidently knew, that trading for future delivery is not only legitimate and honest, but that it cannot be dispensed with. Congress may legislate against it and it may also legislate against the action of the tides. The latter fact, of course, was not presented to all the committee, because it was not necessary. Hardly any important business transaction takes place in which the question of future delivery is not involved, no more striking instance being presentable than the sale by the farmer (in whose interest this precious measure was proposed) of his wheat or corn before the crop is out of the ground. The latest anti-option bill was practically the same as those introduced in former years, except that the penalty for the violation of its provisions was greater.

GROSS EARNINGS STILL GAINING.

Gross railway earnings in February this year show, in the aggregate, a larger gain over the corresponding month a year ago than any preceding month for a long time past. In fact, the proportion of gain noted is heavier than in any preceding month since July a year ago, and with that single exception is the heaviest reported for any month for more than three years past. This large gain has been made in a month which, if not classed as the worst month of the year for railway earnings, is certainly open to the charge of being one of the poorest periods of the whole year for the railroad interests.

The total earnings of 126 companies for the month of February aggregate $34,943,301, an increase over February, 1895, of 13.7 per cent. This increase compares well with the increase shown in the month of January just preceding, when the gain of all roads was slightly larger than 11 per cent., and this, too, in the face of a naturally

heavy reduction in the volume of railroad traffic. In considering the large gain shown over a year ago it is, of course, proper not to forget that February, 1895, was a very poor one for the railroads, owing to the heavy storms during the first half of the month. In some sections, notably the south, the influence of unfavorable weather was such as to practically suspend railroad transportation for a considerable period. In this connection, it is not out of the way to recollect that in February a year ago snow fell to the extent of six inches in the city of New Orleans, and at other points in the south the thermometer went lower than ever before on record.

It must be remembered, also, that the grain movement a year ago in February was very small compared with that of this year, when the movement of most cereal crops to market has been very heavy.

The following table shows the earnings, monthly, for one year past, with comparisons for previous years, and well illustrates the exceptional position occupied by the month which has recently ended:

	1895.	1894.	1893.
March	Inc. .6	Dec. 13.2	Inc. 4.7
Three months	Dec. .5	Dec. 12.6	Inc. 2.4
April	Inc. 4.5	Dec. 14.3	Inc. 3.5
Four months	Inc. .9	Dec. 13.4	Inc. 2.0
May	Inc. 6.5	Dec. 17.5	Inc. 9.3
Five months	Inc. 2.5	Dec. 14.2	Inc. 4.0
June	Inc. 8.0	Dec. 22.0	Inc. 5.0
Six months	Inc. 2.5	Dec. 15.4	Inc. 4.5
July	Inc. 15.6	Dec. 19.0	Dec. 4.0

August	Inc. 1.6	Inc. .9	Dec. 13.0
Eight months	Inc. 4.2	Dec. 14.0	Inc. .8
September	Inc. 4.6	Dec. 5.3	Dec. 9.5
Nine months	Inc. 4.5	Dec. 13.0	Dec. .5
October	Inc. 6.8	Dec. 3.1	Dec. 2.1
Ten months	Inc. 4.7	Dec. 12.2	Inc. 1.0
November	Inc. 6.3	Dec. 1.4	Dec. 6.6
Eleven months	Inc. 4.8	Dec. 10.9	Dec. 1.5
December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	**1895.**	**1894.**
January	Inc. 11.3	Dec. .5	Dec. 12.0
February	Inc. 13.7	Dec. 2.3	Dec. 12.0

The following table shows the increases made by the different groups of roads during February and the first two months of the year, as compared with the gains or losses shown during December and the entire year 1895:

	Two mos. February, 1896.	*January,* 1896.	*December,* 1895.	*Year* 1895.
Granger	Inc. 22.2	Inc. 22.0	Inc. 21.3	Inc. 7.6
Central west'n	Inc. 7.9	Inc. 8.2	Inc. 6.2	Inc. 8.0
Trunk	Inc. 8.6	Inc. 10.0	Inc. 7.3	Inc. 5.0
Eastern	Inc. 2.2	Inc. 5.4	Dec. .3	Dec. .2
Coal	Inc. 2.9	Inc. 7.0	Inc. 9.9	Inc. 6.3
Southern	Inc. 15.9	Inc. 20.3	Inc. 10.3	Inc. 5.8	Inc. 2.2
Southwestern	Inc. 6.8	Inc. 10.1	Inc. 4.5	Inc. .4	Inc. 2.0
Pacific	Inc. 19.7	Inc. 22.3	Inc. 17.0	Inc. 17.0	Inc. 7.5
Totals, U. S.	Inc. 12.6	Inc. 13.8	Inc. 11.3	Inc. 8.7	Inc. 5.1
Mexican	Inc. 5.8	Inc. 8.3	Inc. 5.7	Inc. 11.1	Inc. 6.4
Totals	Inc. 12.4	Inc. 13.7	Inc. 11.3	Inc. 8.3	Inc. 5.2

Three groups of roads, it will be seen, distinguished themselves by their large gains during the month of February, these being the granger, Pacific and southern railways, in each of which the increase was in excess of 20 per cent. The smallest gain was that reported by the coal roads, namely, 2.5 per cent. In the other groups the gains varied from 5 per cent. to 10 per cent. The showing made for the two months' period is very similar, and compares well with the gains shown in December and in the entire year 1895.

Among the specially favorable features brought out by an examination of the detailed returns by railroads are the large number of individual gains shown during February and the two months' period over a year ago. While some of these gains were, no doubt, due to the occurrence of one more business day in February this year than last, the tendency toward an increase is so general as to be worthy of remark. Of the 117 companies controlling 126 roads, 98 report an increase over February a year ago, while for the two months' period 96 show gains, indicating that more than three-fourths of the railroads of the country have increased their earnings over a year ago. Another encouraging feature in the month's returns, aside from the small number of decreases, was the trifling nature of the losses shown. In only one of the 19 decreases for the month of February did the falling off exceed $16,000. On the other hand, there were 23 companies reporting increases in excess of $50,000, and 13 of these companies reported gains in excess of $100,000 each. The following table will give an idea of the extent and distribution of the larger gains:

Chicago, Milwaukee & St. Paul	$378,000
Great Northern	257,000
Chicago Great Western	140,000
Rock Island	107,000
Illinois Central	155,000
New York Central	239,952
Chesapeake & Ohio	129,000
Louisville & Nashville	230,000
Norfolk & Western	177,873
Southern	205,666
Missouri, Kansas & Texas	118,000
Canadian Pacific	332,000
Northern Pacific	222,000

CHANGING THE ADMINISTRATIVE CUSTOMS LAW.

Criticism of the working of the administrative features of the tariff has led to an investigation into the subject from several points of view, and the consideration of the matter which has resulted has led to the framing of a bill which amends the existing law in some important respects. This bill, upon which a favorable report was ordered by the House Ways and Means Committee this week, contains some provisions of importance intended to prevent undervaluations. One of these provisions requires exporters to satisfy consular officers of the true value of goods desired to be shipped. Consular officers are given authority to refuse to certify to invoices unless the required oath is given, and no merchandise exported from any country or consular district to the United States is to be delivered on entry until the required oath has been certified to by the consular officer. Another provision prohibits any person holding a license as a customs broker from administering oaths.

The regulations regarding the assessment of additional duty for fraudulent entries are amended by the bill so as to provide that if the appraised value of any article of merchandise subject to an ad valorem duty, or to a duty based upon or regulated in any manner by the value thereof, shall exceed the value declared in the entry, there shall be levied, in addition to the duties imposed by law on such merchandise, an additional duty of 1 per cent. of the total appraised value for each 1 per cent. that such appraised value exceeds the value declared in the entry, but the additional duties shall only apply to the particular article or articles in each invoice that are so undervalued, and shall be limited to 100 per cent. of the appraised value of such article or articles. Such additional duties are not to be construed to be penal, and not to be remitted nor payment thereof in any way avoided except in cases arising from a manifest clerical error, nor are they to be refunded in case of the exportation of the merchandise or subjected to the benefit of drawback; provided, that if such appraised value of any merchandise shall exceed the value declared in the entry by more than 50 per cent., except when arising from a manifest clerical error, such entry shall be held to be presumptively fraudulent, and the collector of customs shall seize such merchandise and proceed as in case of forfeiture for violations of the customs laws, and in any legal proceedings which may result from such seizure, such undervaluation, to be shown by the appraisement, shall be presumptive evidence of fraud, and the burden of proof shall be on the claimant to rebut the same, and forfeiture shall be

adjudged unless he shall rebut such presumption of fraudulent intent by sufficient evidence.

Regarding the method of arriving at the value of merchandise, it is provided that it shall be lawful for appraising officers in determining dutiable value to take into consideration the wholesale price at which such or similar merchandise is sold or offered for sale in the United States, after deducting the estimated duties thereon, the cost of transportation, insurance, and other actual and necessary expenses from the place of shipment to the United States, and a reasonable commission, if any has been paid, not exceeding 6 per centum. The existing law is so amended as to prevent any general appraiser who acted originally in a case from being one of the board to decide it. With the view of reducing the number of protests and relieving the courts of cases, a protest fee of $2 is charged for.

The section regulating appeals from the decisions of the Board of General Appraisers in the present law is stricken out and a new section substituted. The proposed section provides for application to the Circuit Court of Appeals instead of to the Circuit Court for a review of the proceedings. It provides that the evidence taken by the Board of General Appraisers shall constitute no part of the return made by the board to the court, which shall consist of the invoice and the papers and exhibits connected therewith originally transmitted by the collector to the board with their findings of fact in the case and their decision thereon. The section adds:

The findings of fact returned as aforesaid shall be conclusive as to all questions of fact arising in the case upon all parties and upon said Court of Appeals, but said court, if it deems the findings of fact returned by the Board of General Appraisers insufficient to enable the court to determine the correctness of the decision of the said Board of General Appraisers upon the questions of law involved in respect to classification and rate of duty, may submit such question or questions as it deems advisable to said Board of General Appraisers, and require a further finding or findings of fact thereon, and the said Board of General Appraisers shall forthwith, on receiving an order from the said court for further findings of fact on questions submitted to them by the said court, as hereinbefore provided, proceed to determine such questions and return their findings of fact thereon to the said Circuit Court of Appeals. The aforesaid returns shall constitute the record and case, upon which said Circuit Court of Appeals shall give priority to and proceed to hear and determine the questions of law only involved in such decision of said Board of General Appraisers respecting the classification of such merchandise and the rate of duty imposed thereon under such classification. The decision of the said court shall be final, and the proper collector or person acting as such shall liquidate the entry accordingly, provided, however, that in such cases the said Circuit Court of Appeal shall have the same power to certify questions of law to the Supreme Court of the United States, and the said Supreme Court of the United States shall have the same powers to take control of such cases by certiorari or otherwise after they have been brought into the said Circuit Court of Appeals that are now conferred by law upon said courts or any of them in respect to subjects within the appellant jurisdiction of said Circuit Court of Appeals.

All final judgments, when in favor of the importer, are to be satisfied and paid by the Secretary of the Treasury from the permanent indefinite appropriations. The Secretary is authorized to expend a sufficient sum, not exceeding $45,000, to provide for the sampling and assaying of imported silver ores and other ores containing lead, at El Paso, Tex., Northport, Wash., and Bonner's Ferry, Idaho, and such other points as in his judgment the interests of the revenue demand. The amendments proposed are in the main the outcome of the suggestion of officials and others specially acquainted with the administrative side of the revenue question, and will carry weight accordingly.

PRESIDENT ROBERTS ON THE RATE SITUATION.

Since the beginning of the present year the trunk-line railroads have been giving a very fair trial to the plan for regulating their competition adopted last autumn under the style of the Joint Traffic Association. There has been some friction, of course, and allegations of underhand cutting and manipulation of rates have been heard. Nevertheless, any complaints about the new arrangement do not come from trunk-line railroad people. On the contrary, it is the smaller indirect routes and the western lines which have been accustomed to vary rates at their pleasure and to put in bids for every shipment of goods in sight that are disturbed by the way the large roads are holding up rates. At the same time shippers who have been favored in the formerly common discriminations in rates are, of course, out of sympathy with the new order of things. It is also alleged that the strict maintenance of tariff rates has an important influence in diverting grain shipments to the gulf ports at the expense of the Atlantic seaboard cities. This, however, makes no impression on the trunk-line authorities, who are thus far apparently satisfied with the workings of the new association and hopeful of its successful maintenance.

It will be remembered that when the meetings of the trunk-line presidents were in progress last autumn and the plan of the present association was under discussion the Pennsylvania railroad was the chief opponent of the provisions as originally submitted, and that the modifications subsequently agreed upon were largely due to the objections of the Pennsylvania's representatives.

The views of Mr. Roberts, the Pennsylvania's president, upon this subject are, accordingly, of high interest. In his address to the stockholders of the company, at their annual meeting in Philadelphia on the 10th instant, the following occurs:

"The management has called attention briefly to the continued unsatisfactory condition of the transportation interests of the country, and stated that the evils arising from the continuous demoralization of rates seemed to demand that some arrangement should be consummated between the greater lines that would prevent this, and at the same time give to the public that which it demanded, and expected to receive, without at the same time injuring and destroying the value of the property. What I mean is, similar service for the same amount of money, under similar circumstances; in other words, plainly speaking, I think there should not be the discrimination, either between localities or individuals, that so largely seemed to obtain in the administration of many of the transportation interests of the country.

"The various transportation interests approached this subject with the idea of forming an association, not for the purpose, as the public generally understood, of forming a pool, which is quite a misnomer when applied to railroad interests, but for the purpose of forming an association by which the larger interests should come together and fix upon some proper method of conducting their business, so that each locality and each individual would receive what they were entitled to receive for the same compensation—equal returns.

"This association began its work at the first of the year. So far it has shown that the benefits have been nearly altogether with the public. There is no railroad that is receiving to-day any higher compensation by reason of that agreement than what their tariff sheets indicated they were entitled to receive before they made the agreement. There is no combination for the advancement of rates whatever; the association was formed for the sole purpose of endeavoring to carry on the transportation interests of the country in harmony. We believe, although it has been called in question by Congress, that it will, as stated in this report, be found to be an instrument through which the law known as the Interstate Commerce law, so far as its efforts to secure the equality before referred to, can be more nearly and better enforced than in any other way. Those who were instrumental in getting it up gave it the utmost publicity, and did not desire to do anything which was not in harmony with the law of the land.

"I, therefore, claim for it, so far as this company is concerned, that it is an association we believe wholly within the scope of the law, gotten up for the purpose of carrying out what we believe to be the fundamental principles of the Interstate Commerce law, and an instrumentality that tenders to the Interstate Commerce Commissioners the fullest and best method of enforcing the law."

CROP REPORTING.

The Agricultural Department reports 123,000,000 bushels of wheat "in farmers' hands" on March 1 this year, against 75,000,000 bushels one year ago, which seems to indicate that the government statistician recognized his total of farmers' reserves a year ago was too small—much too small. Reports, estimates of, or calculations as to the quantity of wheat in farmers' hands on March 1, ranged as follows: BRADSTREET'S, 97,000,000 bushels; Chicago *Bulletin*, 109,000,000 bushels; government report, 123,000,000 bushels; the Chicago *Orange Judd Farmer*, 135,000,000 bushels; the Chicago *Prairie Farmer*, 157,000,000 bushels. The lowest total, a calculation based on data which had had the indorsement of the trade and government statisticians, together with our own reports, naturally started up the whole coterie of special crop reporters, particularly after the government report was published showing 25,000,000 more bushels of wheat in farmers' hands than could have been there if its own previous reports on crop and reserves were true, even when backed by BRADSTREET'S totals of available supplies. That was a point BRADSTREET'S desired to emphasize—one it has been emphasizing for years for the benefit of government statisticians and our friends who flatter us, even if they do imitate too crudely to get statistically valuable results. We have made it plain that either the government's reported total of the wheat crop in 1895 was much too small, or that its reported total of reserves in farmers' hands a year ago was absurdly low, or else—and perhaps all three are true—the ex-Statistician Dodge tradition that the annual domestic consumption of wheat per capita, 4.67 bushels, is erroneous.

We shall probably make another calculation as to wheat in farmers' hands next year, based on data furnished by the government, ourselves and others. Our own material can be vouched for. If the outcome of the calculation is not in accordance with what later appear to be the facts, the government figures used or data of others must bear the consequences, as they have had to do in the past. Meanwhile, we shall address ourselves to the task of ascertaining as far as possible the approximate annual domestic consumption of wheat per capita. Somebody must undertake the work, and, as a matter of fact, it has been begun.

WESTERN UNION'S OUTLOOK.

The quarterly statements of earnings issued by the telegraph organization which practically covers the entire United States may be regarded as one of the most useful indexes to general business activity for the periods they cover. The statement just issued by the Western Union Company for the March quarter is, therefore, a subject for careful examination. The figures, it must be observed, are partly estimated for the present month, while in the returns for the two preceding years given for the purpose of comparison the actual figures are given. The comparison is as follows:

Three mos. ending Mar. 31.	1896.*	1895.	1894.
Net revenue	$1,250,000	$1,163,781	$1,094,701
Interest and sinking funds.	243,560	243,391	243,737
Surplus	$1,006,440	$920,390	$850,964
Dividends (1¼ per cent.)	1,191,950	1,191,936	1,185,022
Deficit	$185,511	$271,546	$334,058

* Partly estimated.

For nine months of the current fiscal year the comparative statement is as follows:

Nine mos. ending Mar. 31.	1896.	1895.	*Changes.*
Net revenue	$4,696,064	$4,594,500	Inc. $137,722
Interest and sinking funds	730,670	730,500	Inc. 576
Balance	$3,965,393	$3,864,000	Inc. $137,148
Dividends	3,575,835	3,576,000	Inc. 51
Surplus	$389,558	$298,008	Inc. $137,097

For the March quarter alone the increase in net earnings is $86,219, the deficit under the proportionate amount of fixed charges and sinking fund requirements for the period in question being reduced by $86,036. The deficit for the quarter deducted from the previous accumulated surplus would make the latter $7,837,023 on the date at which the returns end.

An interesting comparison may also be made with the net revenues of the company (actual figures) in preceding March quarters of the year. As against the estimated return of $1,250,000 in the first three months of the current year, the above tabulation gives the actual net in the same portion of 1895 as $1,163,781. In 1894, however, for the March quarter the net was only $1,094,701, against $1,584,434 in 1893, $1,549,637 in 1892, $1,326,681 in 1891, $1,554,152 in 1890, $1,363,813 in 1889 and $1,153,192 in 1888. It will be seen that the total net of the company exceeds any March quarter after 1893, though it is below the records established between the last mentioned year and 1888.

As far as the Western Union Company's own financial position is concerned, the returns given above are satisfactory. The company, it is true, has been somewhat favored by the character of the weather during the winter, the absence of the kind of storms which render extraordinary repairs a necessity being very noticeable. This, of course, has its effect upon the net earnings. Nevertheless, the performance of the property during what is universally the worst quarter of the year, and at a time when business activity has received a check calculated to have its effect upon the use of telegraph facilities for all purposes, points to a continued ability to maintain its dividends upon the basis of 5 per cent. per

annum, and at the same time to devote the requisite amount of its income to repairs, betterments and new construction. The declaration of the usual quarterly dividend of 1¼ per cent. is an indication in this connection.

Some interest naturally attaches to the disposition of the Baltimore & Ohio's holdings of Western Union stock. When the Baltimore & Ohio Railroad abandoned its ill-starred telegraph enterprise, part of the consideration for which it transferred its wires to the Western Union was 50,000 shares of the latter company's stock. This stock, so far as known, has remained in the possession of the Baltimore & Ohio, though from time to time rumors of an intention to dispose of it have been heard in connection with the discussion of the railroad company's financial troubles. Now that the latter is in the hands of receivers and is about to pass through the fire of reorganization, it is to be presumed that the stock in question will be closed out provided a favorable price can be obtained. The possibility of realizing between $4,000,000 and $5,000,000 cash on this asset is likely to determine the outcome. Indeed, the "street" has been regaled with rumors that the holders of loans in which this stock or part of it is pledged as collateral have been inclined to close them out. This, however, is not substantiated, nor, considering the use to which the ownership of such a block of Western Union stock by a concern the position of which has been so shaky as Baltimore & Ohio has been put in the past as material for disturbing rumors, would the position of Western Union stock in the market be harmed by the distribution of the block in question in the hands of investors.

THE BRITISH SOUTH AFRICA COMPANY.

Recent events have lent a great deal of interest to the affairs of the Chartered Company of British South Africa, the organization designed to create a British commercial and political empire in southeastern Africa. The company, it will be remembered, was one of the grandiose creations of Mr. Cecil Rhodes, whose name has been applied in the title of Rhodesia to the enormous territory it controls. The foundation under the company's auspices of the settlements in Mashonaland and the discovery of considerable auriferous deposits therein, some of which had been worked in pre-historic time by an unknown race, are matters of history, though but two or three years have elapsed since the facts transpired. So, too, is the overthrow of the brave but savage Matabeles, the last native race in South Africa capable of offering effective resistance to the progress of settlement and development by the whites. Finally, within the last few months, we have seen the ill-judged attempt of Dr. Jameson, the company's chief administrator, to invade the territory of the neighboring Transvaal republic, the defeat and capture of his force by the Dutch Boers, and his own deportation to England, where the officers of the expedition are now undergoing trial on the serious charge of levying war on a friendly state.

While officially the Chartered Company seems to have had no part in Jameson's raid, the suspicion that his ill-fated enterprise was really undertaken with the connivance and assistance of his superiors, if not of the company's board, has not been allayed. The retirement of Mr. Rhodes, the company's head, from the premiership of the Cape Colony was one result, and another was the surrender by the company to the crown of all control of the armed forces in its territories. It has indeed been rumored that Mr. Rhodes, too, will be included in the prosecutions arising out of the events in question, and from all appearances the complications of the Chartered Company are not at an end.

The latest numbers of the London financial journals give a synopsis of the annual report of the British South Africa Company, which contain a variety of interesting information as to its operations. The report covers the twelve months ending March 31, 1895, and is therefore nearly a year old. It also naturally omits any reference to the recent sensational developments as matters sub judice, and therefore not to be touched on at this juncture. The financial and material results exhibited are, however, of an encouraging nature. The report makes mention of the fact, stated recently in the House of Commons, "that after paying off its debentures and all other debts the company has a cash balance of some £600,0000 in hand, and has got rid of a heavy annual charge for interest. This is altogether independent of the sums subscribed for railway construction, amounting to some £900,000. For the year under review the revenue was £118,883 and the administrative expenses were £142,423, the respective figures for the previous year being £44,489 and £65,767. The expenditure includes the cost of posts and telegraphs, police, high court, hospitals, and also a special item of £14,471 for telegraph construction. Under the head of revenue we find that stand sales and land revenue brought in £53,047, stamps and licenses £30,221, telegraphs £9,701, postal business £4,609, and fines, fees, rents, taxes, etc., £21,303."

Companies have been formed for the development of the gold industries within the Chartered Company's territory, in which the company has a share interest, the nominal capital of the same organization being £2,600,000. At the same time an immense number of other concerns are also at work in Rhodesia, in which it is interested, through royalties and licenses. The gold industry of the country is, however, as yet in its infancy, and is dependent for ultimate success upon the extension of the railroad lines to it. On this point the report gives interesting information. "In the case of the Bechuanaland Railway Company, it is pointed out that the line from Vryburg to Mafeking was opened for traffic in October, 1894, and that the net earnings for the ten months to the end of July, 1895, have been equal to 4 per cent. per annum on the cost of this section. The section from Mafeking to Gaberones, about 95 miles, is now in course of construction, and will be opened about July, and from Gaberones the line will be continued to Palapye, a further distance of about 175 miles, and will eventually be carried on to Salisbury via Buluwayo. The Beira Railway, to which Mr. Rhodes is shortly going to apply himself, is progressing, and the extension from Umtali to Salisbury will speedily be commenced. The Beira Junction Railway, which will bring the capital of Rhodesia in direct railway communication with the seacoast, will be completed and opened for traffic within a few months." There are also completed and in operation some 1,400 miles of telegraph lines. The report as a whole is a very substantial record of progress in developing and civilizing a land rich in resources that but a few years ago was given up to savages and wild beasts.

REASONABLE RATES ON WHEAT.

In a decision lately rendered by the Interstate Commerce Commission, in a case involving the reasonableness of rates for the transportation of wheat from Walla Walla and Dayton, in Washington, to Portland, Ore., the commission took occasion to restate some conclusions reached by it in earlier cases involving similar circumstances. It reiterated the doctrines that the practice of making one rate on the same product over a large district is only justifiable under special and exceptional circumstances, and is not to be encouraged when the difference in the transportation expense from the various parts of such district is considerable and substantial; that in order that railroad investments may be as secure as other property, the reasonable rates should be liberal until earnings are sufficiently large for a fair return on actual expenditure, and that where the market price yields but a scant return for the labor and expense of production, the cost of transportation needs to be as moderate as may be consistent with justice to the carrier. At the same time the commission held that competition or a division of business as the result of building a second road where previously but one existed should justify lower rather than higher charges.

The complaint in the case (Evans vs. Union Pacific Railway Company, the Oregon Railway and Navigation Company, and others) filed June 15, 1894, alleged that the defendants charged and demanded an unjust and unreasonable rate of $4.70 per ton for the transportation of wheat in carloads shipped over their railroad from Walla Walla, in the state of Washington, to Portland, in the state of Oregon, a distance of 246 miles, and that a just and reasonable charge for such service should not exceed 1c. per ton per mile, or $2.46 per ton, the shipper loading and the consignee unloading the freight. After the filing of the complaint the receiver of the Oregon Railway and Navigation Company reduced the wheat rate from Walla Walla of 23½c. a hundred, or $4.70 a ton, to 21¼c. a hundred, or $4.25 a ton, and the rate from Dayton of 23¾c. a hundred, or $4.75 a ton, to 21¼c. a hundred, or $4.25 a ton.

It was shown among the circumstances having a bearing on the case that the market price of wheat at Portland and other Pacific coast points had been reduced fully or nearly one-half since 1887, while the wheat rate from Walla Walla to Portland remained the same as that which was put in force in the latter part of that year until shortly after these cases were instituted, when a reduction of 2¼c. per hundred pounds was conceded by the receiver, and a reduction of 2½c. was accorded to Dayton. There had been extensive reductions on the other classes of freights from all points on the lines since 1887, and the reductions in wheat rates from points much more remote than Walla Walla or Dayton from Portland had been very considerable. The cost of raising wheat, sacking, warehousing and loading in cars ready for transportation, added to the transportation charge to Portland, it was shown, left far less margin to the producer between such cost and the selling price than in 1887. It was further shown that the road from Walla Walla to Portland has easy grades, and is much less expensive to operate than other portions of the defendant system, but that this part of the road is subject, however, to sand drifts, earth slides and washouts by floods in the Columbia river, and that alkali in the soil increases the natural deterioration of ties and wooden substructures, which, the commission held, were matters to be considered in determining the reasonableness of the rates in question.

Upon a review of all the facts in the case, the commission arrived at the conclusion that the wheat rates in force from Walla Walla and Dayton to Portland when the cases were brought were unjust and unreasonable, but that rates based on 1c. per ton per mile, namely, $2.45 per ton from Walla Walla, and $2.83 per ton from Dayton, as contended for by complainants, would be unjust to the road under present conditions. On the other hand, upon all the facts and considerations before them, the commission held that the reduced rate of 21¼c. per hundred, or $4.25 a ton, put into effect from both points in August, 1894, was still somewhat too high for the service rendered, and it ruled that the rate from Walla Walla to Portland on wheat in carloads should not exceed 19½c. per hundred pounds, or $3.90 per ton, while the rate for the somewhat longer distance from Dayton to Portland on wheat in carloads should not exceed 20c. per hundred pounds, or $4 per ton.

One point of interest regarding procedure was passed upon in the case, it being held that prior leave of a court which has appointed a receiver is not necessary to entitle a shipper to complain against such receiver in a proceeding before the commission, and that such leave is not necessary to give the commission jurisdiction of such a proceeding.

NEW ORLEANS AND ALGIERS DRY DOCK.

New Orleans, March 5.—The total lack of facilities for docking and repairing large vessels on the south Atlantic gulf coast has been a subject of discussion before committees in Congress for many years. The necessity for a dry dock of sufficient dimensions to accommodate the larger ships of the navy has been recognized as a military necessity. Two successive commissions were appointed by act of Congress, in pursuance of the wide-spread demand for a dry dock on the gulf coast, for examining all the harbors along the south Atlantic and gulf, and reported favorably on Algiers, a point immediately opposite the city of New Orleans on the Mississippi river, about one hundred miles from the mouth of the river. The government already owns some land at this point, and appropriation was finally made and a sufficient tract adjoining has been bought and paid for. The Secretary of the Navy has several times recommended that the appropriation of $100,000 should be passed with the naval appropriations for the purpose of beginning work on this dock, but the appropriation has been defeated, owing, no doubt, to the want of a proper understanding as to the necessity for such an expenditure. The first commission reported November 18, 1889, the following recommendations: "After carefully weighing all the advantages and disadvantages of Algiers as a site for a naval station, the commission is of opinion that, while the spot is not an ideal one, no other place on the gulf compares with it in the advantages offered, and that the advantages are so many and so great and outweigh the disadvantages to such an extent that the commission has no hesitation in recommending the location of a navy yard

and dry docks at the present government reservation at Algiers, La."

A second commission was appointed June 30, 1890, to select a suitable site, having due regard to commercial and naval interests, for a dry dock at some point on the shores of the Gulf of Mexico and waters thereby. The President appointed upon this commission Captain Francis M. Bunce, United States Navy; Major H. C. Hasbrouck, Fourth Artillery, United States Army; R. M. G. Brown, United States Navy, and Messrs. Sidney Perham and David T. Littler. Their report was submitted March 9, 1891. The report contained a clear statement of their investigation of seventeen different points on the Gulf of Mexico, and the following conclusion was reached: "The South Pass of the Mississippi river affords the only entrance 26 feet deep to a port of harbor on the Gulf of Mexico or waters connected therewith far enough from the sea to be safe from gun fire." The commission incorporated into their report an opinion of General C. B. Comstock, president of the Mississippi River Commission, that the channel at the South Pass jetties is permanent, in the sense that it will be possible to maintain a channel there of at least 26 feet depth at low water in the river as long as the jetties are maintained to deep water and the damages from storm repaired, and the commission's report is as follows:

"New Orleans is the only port on the gulf coast or the waters connected therewith where the three primary requisites for a dry dock are to be found. It is situated about one hundred miles up the river. It is the largest city in the gulf states. From the entrance of South Pass to the city a depth of more than twenty-six feet can be carried at all times. The soil of the river banks in its vicinity at the surface light is from two to four feet below the surface, of clay, or clay and sand, increasing its density and solidity with the depth of the boring or excavation made, insuring a foundation amply sufficient to support a load of 15,000 tons in the dock by the employment of the usual methods in its construction.

"This port has other and great advantages as the site. Being the greatest center of population of the gulf states, labor, skilled or otherwise, can be obtained at short notice. Its foreign commerce is greater than that of all the other gulf ports together, last year reaching 2,034,072 tons; all others, 1,997,892 tons. A fresh-water harbor, its water communication with the interior by the Mississippi, and its tributaries, is no where in the world equaled, and this is supplemented by six great railroad lines, which, with their connections, reach every part of the country. Defense of these by the whole power of the nation is assured. It is a military necessity. Fresh water for all uses is supplied by filtering the river water, by the rainfall, and by artesian wells. Epidemic diseases of foreign origin are prevented by a strict system of quarantine regulations, and the general health of the city is as good as that of any gulf port. A supply of iron, coal or other material required can always be had at short notice, and at cheap rates," and concluded with the following: "The commission therefore select this as the most suitable site for a dry dock on the shores of the Gulf of Mexico or the waters connected therewith." The report of the committee received the following indorsement of the Secretary of the Navy, forwarding the report to the President:

"I approve of the selection made of a site for the dry dock at Algiers, on the right bank of the Mississippi river, in view of the conditions found by the commission to exist there. The naval reservation at this point is too limited in extent for the proper location and use of the dry dock, and it will be necessary to purchase additional lands adjoining." The House Committee on Naval Appropriations, upon the recommendation of the Secretary of the Navy, are about to report favorably upon appropriation of $100,000 for the Algiers dry dock. In view of the importance and the great necessity for recommendations of this commission being carried out without further delay, the appropriation seems totally inadequate to the necessities. From the Bureau of Yards and Docks of the Navy Department we learn "that in view of the increased size of vessels now being constructed and contemplated, a dry dock must be at least 600 feet long, 97 feet wide at the top, 66 feet in the clear at the entrance, with a depth of at least 26 feet, and of sufficient stability to support a load of 15,000 tons."

It is proposed that the dock at Algiers should be 700 feet long, while its width in body will be 164 feet. The width of the floor will be 70 feet and the width of the entrance 100 feet. The draught of water over the entrance sill at the high state of water, it is thought, will be 43 feet. The purpose is to have a sufficient capacity to receive and sustain any warship or other vessels in the world. The estimated total cost is placed at $1,200,000. The designs for this dock were furnished by Civil Engineer Mordecai T. Endicott, of the United States Navy. This officer is the designer of the dry dock at Norfolk navy yard.

Here we have a fresh-water harbor second to none in the world, sufficiently interior to be absolutely protected in case of war; and it must not be overlooked that the action of our fresh water is very favorable on the metal hulls of modern warships. The possibility of increased commerce through the Gulf of Mexico, owing to more extended relations with South and Central America, and the possibility of our relations with the Asiatic countries being largely increased through the Nicaragua Canal, all tend to urge the importance of this appropriation. T.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

In store Mar. 7, 1896.	*Wheat.*	*Indian corn.*	*Oats.*	*Barley.*	*Rye*

In view of recent reports of a marked expansion in the foreign trade of Japan, the recent report on that subject by the British vice-consul at Tokio gathers interest. His report covers the period from January 1 to September 30, 1895. It was only natural the British vice-consul's comment should apply to the point of view of the possibilities for the British exporter in Japan. A marked revival of trade throughout Japan followed speedily on the restoration of peace and the prospect of tranquillity in Formosa. The hopes of a good harvest induced the farmers to buy largely, and a rise in prices followed. The work of the railways and coasting steamers increased, as did the deposits in the banks, and the rates of interest are lower than ever they were before in the commercial history of Japan. The returns of the Tokio Stock Exchange show a great advance in the prices of the shares of most joint-stock undertakings, and especially of the cotton-spinning mills. Ninety thousand new spindles were ordered for existing factories from England between March and August last year, and Japanese capitalists are establishing mills in Shanghai. The people hope to secure a commercial position corresponding to the military one which they have so recently obtained; commercial and industrial questions are as popular in the press as political discussions; the extension of steam routes, the results of the new treaties on trade, technical and commercial schools, insurance, commercial exhibitions and cognate subjects are widely and intelligently discussed, and generally there is a marvelous development in the commercial spirit of the people. "A single generation ago trade in any form was considered the most degrading of pursuits, and all engaged in it were, in the social scale, the lowest of the low." In the opinion of the writer of the report, hope for the immediate future of British trade with Japan lies principally in metals and machinery, and with the prospects in these trades no fears need be entertained of a decline in the aggregate value of British imports. "What may be and is yearly being more and more lost to Lancashire will be fully recouped by gains to Sheffield and Birmingham, and by large contributions to the shipbuilding industries of the Thames, Tyne and Clyde." Another interesting point brought out is that the foreign trade of Yokohama and Hiogo is not approached by any port in China save Shanghai. "Put roughly in millions of dollars, the total foreign trade of the following ports is: Yokohama, 56; Hiogo, 36; Shanghai, 78; Canton, 15; Amoy, 7; Swatau, 5; Tientsin, 6; Fu-chau, 5. Ten, or perhaps even five, years ago it would not have entered into any one's comprehension to compare the direct foreign trade of the Japanese ports with that of any of the principal ports in China."

Criticism of the British consular service from sources within the United Kingdom is heard from time to time. In the last issue of the *Iron and Coal Trades Review* the declaration is made that the United Kingdom has, perhaps, the most complete and costly consular service in the world, and yet that it has on the whole unquestionably the most ineffective, from the traders' point of view. "This," the journal quoted says, "is a broad and sweeping charge to make in reference to any branch of the service, but, unfortunately, it is 'an ower true tale.' Every trader, every manufacturer, every exporter knows to his sorrow how difficult it is to get the consular and diplomatic officers of her Britannic majesty's government to meet their reasonable views and aspirations in reference to commercial affairs. Our old tradition of the service, which has become crystalized into a confirmed habit, is that the consular officer is not required to take any initiative in introducing or promoting business, but has simply, like Captain Cuttle, to 'stand by' until he is called on to do something, which is usually a mere matter of routine, and of no particular service to anybody. The German consul is generally a much more sentient being. He is always ready, perhaps for a substantial consideration, to aid in advancing the interests of his country's commerce, whether it affects the community or merely the individual."

"The consular offices of other countries," the *Review* says, "are in much the same situation. It was the desire to advance the commercial interests of his country, when acting as consul in Egypt, that led Lesseps to promote the Suez Canal. Where can we point to a similar example of valuable intervention on the part of a British consul? The German consuls in the East are now working with might and main to procure for their countrymen the most valuable concessions that the Chinese and the Japanese governments have to offer, and the latest fruits of their efforts in this direction are stated to be that they have both obtained important railway concessions and the virtual control over the new government arsenals at Hanyang. We should rejoice to witness a similar display of activity on the part of our own consuls, and we may even go farther and declare that in our opinion, unless our own consuls are made available to cope with this spirit of enterprise on the part of the Germans, or unless our manufacturers act with greater energy and push for themselves, our trade with the East will follow the fortunes of the trade that we have lost in some other countries."

CURRENT BUSINESS NEWS.

Industrial.

In 1870 the production of pig iron in the United States was 1,665,179 gross tons. In 1895 production at the south, excluding Missouri, was 1,549,204 tons.

Striking garment workers made a street parade in Baltimore this week.

About 250 boiler makers went on strike at Cleveland, Ohio, this week, for an increase of 10 per cent. in wages. The strike threatens to extend to all, about 1,500.

Machinists employed by morning papers at Chicago to keep their typesetting machines in order struck on Tuesday, because, as stated, the *Tribune* put on a non-union machinist.

Four hundred coal miners at Palmyra, Ohio, struck Tuesday.

At Youngstown, Ohio, this week, a conference between the Amalgamated Association wage committee and the secretary of the Bar Iron Manufacturers' Association resulted in an examination of bar iron shipments during January and February, and brought down the price of boiling 50c. a ton and a 4 per cent. reduction in finishers' wages for March and April. The price for boiling during January and February was $4.50. About 10,000 men are affected.

In forest area the south, says ex-Senator Walsh, "leads all the other sections combined. The forest area of the United States is 417,000,000 acres. Of this the south has over 50 per cent., or 211,000,000 acres."

The window, flint and green glass union organizations in Indiana met at Anderson last Sunday to advance the proposed consolidation of these three national unions.

The time for the acceptance by the Pittsburgh coal operators of the uniform wage schedule of the miners having ended this week, and as only but 75 per cent. had accepted, the limit was extended to March 31.

A San Francisco dispatch says that Cleveland, Ohio, people have organized a company to erect large refining works in California to refine the crude oils which have recently been discovered in southern California in such quantities.

Large parties of miners have sailed from San Francisco and Port Townsend, within the past few days, for the Alaska gold fields.

Commercial.

The Chattanooga *Tradesman* says: "Business (south) is fair, and spring trade has been above the average. The cotton planters are preparing for a large crop, and the acreage has been much increased over that of last year."

Cotton manufacturing in the south continues to attract attention, and "new mills steadily increase."

The tobacco crop of 1895 is found by government investigation to have been 491,544,000 pounds, an average yield of 775 pounds per acre on 633,950 acres; value of crop, $35,574,000.

The statistical position of cotton is now said to be stronger than when the price was 2c. a pound higher. If this crop is 7,000,000 bales, 87 per cent. of it has come into sight. Secretary Hester estimates the Texas delivery for the first six months into sight was 1,629,279 bales, against 2,972,196 bales last year and 1,795,412 bales two years ago. The average weight of all cotton which has come into sight this year is estimated to be 502.14 pounds, against 508.27 pounds last year and 496.28 pounds in 1893.

Average farmers' holdings of wheat for ten years were over 133,000,000 bushels, but the government estimates farmers' holdings March 1, 1896, at 123,000,000 bushels, 4.9 per cent. of it being left over from the previous crops. The proportion of wheat sold beyond county lines was 58.5 per cent.

The government report indicates farm reserves of Indian corn March 1 were 1,072,000,000 bushels, or 48.9 per cent. of the 1895 crop, against 476,000,000 bushels held a year previous. The amount then sold outside of county lines was estimated to be 13.4 per cent.; this season it is estimated it will be 21.9 per cent. The merchantable portion is 88.1 per cent., against 82.4 per cent. last year; average farm value, 25.6c.

The contention on the part of a number of importers of precious stones that, by virtue of paragraph 467 of the act of August 28, 1894, diamonds are on the free list, has been definitely disposed of in the negative by a decision given in the United States Circuit Court of Appeals in New York. "Something over $1,200,000 is involved in the decision, as, had the government been defeated, all of the duty paid upon diamonds since the passage of the act of 1894 would legally have had to be refunded on demand."

The quarterly statement of the Fall River mills dividends, just issued, shows that the quarter just passed has been a prosperous one, and all but four of the larger concerns have declared dividends. The average rate on the total capital is 1.93 per cent.

Financial.

In commenting on the statement that a Chicago Stock Exchange membership recently sold in Chicago for $950, "the lowest price made on memberships in several years," the *Shipping and Commercial List* says: "A few months ago some sales were made at $1,200. The decline in memberships reflects the dullness prevailing on the Exchange. There has for some time been no outside business to speak of."

The American Sugar Refining Company has declared a quarterly dividend of 3 per cent. on its common stock and 1¼ per cent. on its preferred stock, payable April 2.

The Minnesota Iron Company has declared a dividend of 1½ per cent., payable April 15.

The Chicago Junction Railway & Union Stock Yards Company has declared a quarterly dividend of 1½ per cent. on its preferred stock, payable April 1.

The Manhattan Railway Company has declared its regular quarterly dividend of 1½ per cent., payable April 1.

The Chicago & Northwestern Railroad Company has declared the usual quarterly dividend of 1¾ per cent. on its preferred stock, payable April 2.

The Tennessee Coal, Iron & Railroad Company reports for the year ending December 31 net profits of $1,045,000. Deducting from this amount $600,000 interest on bonds, $100,000 for sinking fund, and $80,000 for dividend on preferred stock, leaves a surplus of $265,000. There is still two years' accumulated interest on preferred stock, amounting to $160,000, unpaid.

The Western Union Telegraph Company has declared the usual quarterly dividend of 1¼ per cent., payable April 15. The company shows for the first three-quarters of the fiscal year:

	1896.	1895.	*Changes.*
Net revenues	$4,696,065	$4,558,341	Inc. $137,724
Interest and sinking fund	700,674	700,098	Inc. 576
Balance	$3,995,391	$3,858,243	Inc. $137,148
Dividends	3,575,843	3,575,792	Inc. 51
Surplus	$419,548	$282,451	Inc. $137,097

$100,000	United States 4 per cent. registered bonds of 1907	108½

The P. Lorillard Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable April 1.

The Chicago, Milwaukee & St. Paul Railroad Company has declared a semi-annual dividend of 2 per cent. on its common stock and 3½ per cent. on its preferred stock, payable April 20.

The Edison Electric Illuminating Company of Brooklyn has declared a quarterly dividend of 1½ per cent., payable April 15.

The Union Ferry Company has declared a quarterly dividend of 1 per cent., payable April 1.

Railroads.

The report of Missouri Pacific system for the year ending December 31 shows:

Total system.	1895.	1894.	1893.
Gross	$22,672,003	$21,800,645	$24,018,338
Operating expenses	17,021,140	16,483,475	18,257,168
Net	$5,650,863	$5,317,170	$5,761,170
Other income	1,081,881	741,439	1,543,711
Total income	$6,732,744	$6,058,609	$7,304,881
Charges	7,322,991	7,991,965	7,196,076
Deficit	$590,247	$1,933,356	Sur. $108,805

At the recent meeting of stockholders of the Pennsylvania Railroad Company, President Roberts stated that the local industries along the line of the road partook more generally in the improvement of business than the through traffic, as shown by an increase of 21 per cent. in total tonnage and only 18 per cent. in the mileage of that tonnage. Trolley lines (suburban) have cut into the passenger business, but increased distance traveled by passengers has nearly compensated for the decrease in the number of passengers.

The all-rail east-bound shipments of dead freight from Chicago last week were 87,503 tons, against 90,372 tons the previous week and 55,429 tons the corresponding week of the previous year.

The receivers of the Northern Pacific Railroad Company report for January:

	1896.	1895.	*Changes.*
Gross earnings	$1,163,922	$1,017,812	Inc. $146,110
Operating expenses	837,825	859,128	Dec. 21,303
Net earnings	$326,097	$158,684	Inc. $167,413
JULY 1 TO JANUARY 31.			
Gross earnings	$13,153,205	$11,353,429	Inc. $1,799,775
Operating expenses	6,973,915	7,012,051	Dec. 38,135
Net earnings	$6,179,290	$4,341,378	Inc. $1,837,912

The Louisville, New Albany & Chicago Railroad reports gross earnings for January of $233,419, an increase of $16,919 as compared with the same month of last year, and net $49,324, an increase of $18,230. For the seven months ending January 31 the gross earnings were $1,983,424, an increase of $172,919 as compared with the corresponding period of last year, and net $701,598, an increase of $120,920. Fixed charges were $592,630, leaving a surplus of $108,968, an increase of $109,311.

Judge Swerin, in Grand Rapids, Mich., on Saturday, gave a decision in the Grand Rapids & Indiana Railroad foreclosure suit in favor of the second mortgage bondholders to the amount of $3,734,765, and ordered the sale of the entire property. The decree is made subject to the first mortgage bonds, and by its terms the holders of the third mortgage bonds are entirely cut off.

In Baltimore this week Judge Harlan signed an order requiring the Baltimore & Ohio Railroad Company to show cause why it should not pay into court all the funds held in trust for the Baltimore & Ohio Employees' Relief Association, amounting to about $400,000.

The Erie Railroad Company reports for January:

	1895.	1896.	*Difference.*
Gross earnings	$2,094,120.25	$2,316,112.33	Inc. $221,992.08
W'k'g expenses	1,742,499.43	1,821,995.31	Inc. 79,495.88
Net	$351,620.82	$494,117.02	Inc. $142,496.20

The Illinois railroad commissioners' report says: "Nearly all the railroad companies in the state have at some time been bankrupted, and the original investors have been subjected to great losses. To the general law which authorizes the unrestricted construction of railways, bankruptcy and other financial embarrassments of the railroad companies may be largely attributed. However aggressive the policy of railroad companies may have been in the past, it can no longer be successfully contended that they are beyond the power of legislative authority. It is therefore apparent that the action of the state and national governments tending to adjust the relations between the public and the railroads in their quasi-public position should also as far as practicable tend to protect them in their vested rights."

Miscellaneous.

Consideration of the post office appropriation bill in the House this week resulted in a defeat of efforts to cut off the appropriation for the fast mail running through Washington from Boston and New York to Atlanta, New Orleans, Jacksonville and other southern cities.

The New York publisher, John B. Alden, has issued another useful reference-book, a "cyclopedia of living topics," which is being published in monthly numbers. The aim is to furnish information on current events for quickest reference.

Michael G. Mulhall on "Is the Human Race Deteriorating?" in *North American Review* says: "The area of the United States, excluding Alaska, is just 3,000,000 square miles; the average density of the New England states is 71 inhabitants to the square mile, so that it may be said that the Union could easily support 210,000,000 souls, or three times its present population. Meantime other vast fields are opening to invite immigrants. Canada, Brazil, Spanish America and Australia are each of them larger than the United States.

The directors of the Baltimore Central Exposition, which it was proposed to hold in 1897, have decided to abandon or postpone the project, "owing to the unsettled financial condition of the country, the failure of the Baltimore & Ohio, and the refusal of the wealthiest citizens and corporations to subscribe. The 'Young Men's Auxiliary Committee' of the Exposition proposed, however, to try to carry the project through. The matter will be decided at the stockholders' meeting at Baltimore on the 18th instant."

The executive committee of the American Forestry Association has forwarded to the Secretary of the Interior a protest against the contemplated opening of the Cascade range forest reserve in Oregon. This reserve contains 4,492,800 acres, and is situated on the crest of the high Sierra. It is claimed that there are no agricultural lands in the reservation; that the lumber interests are not in need of its timber supplies; that the miners are not affected, and that the only interest prompting the movement are the sheep-herders.

Foreign.

From a consular report for 1894, it appears that dairy products and cattle form over 80 per cent. of the exports from Denmark, and the total for the year amounts to upwards of £10,000,000, most of which went to the United Kingdom. As compared with the previous year, there was an increase both in imports and exports.

The estimated number of cattle, sheep and horses in Argentina is given by a Buenos Ayres paper at 25,000,000, 80,000,000 and 5,000,000 respectively, as against about 17,000,000, 71,000,000 and 4,000,000 in 1887. The provinces which contain the largest numbers of cattle are Buenos Ayres, Entre Rios, Corrientes, Santa Fé and Cordoba. In the last census of the province of Buenos Ayres in 1881 cattle were put down at 4,754,000 and sheep at 57,845,000.

The policy of retrenchment instituted by the Newfoundland government has, according to a cablegram, "proved successful," and has been the means of effecting a saving of $50,000 during the past six months in the foreign mail service, coupled with an increase in the mails dispatched. The report of the savings bank is favorable, and "confidence has been restored."

The Central American coffee crop will, it is estimated, be 100,000 bags less than last year.

An agreement for a loan of £16,000,000 has been signed at London by the Chinese government and an Anglo-German syndicate. One-half of the loan will be issued soon in 5 per cent. gold bonds at about par.

A Birmingham traveler in Russia writes: "Business here (St. Petersburg) is pretty brisk, but not in English-made goods, the German, Belgian and French competition having taken their place, partly through lower prices and partly through better finish. Dealers who have come to see my samples would not even look at a large portion of them, as they had given up buying them from England for some time."

Feeling has been aroused in medical circles in England by the regulations recently issued for the Twelfth International Medical Congress to be held in August, 1897, at Moscow, as follows: "French is recognized as the official language of the congress for all international relations. At the general assemblies speeches may be delivered in other European languages. The sectional papers and discussions must be either in French, German or Russian."

Merchants of Barcelona have agreed not to sell American products "in the event of President Cleveland approving of the Cuban belligerency resolutions of Congress. They have also opened a subscription toward a fund which is to be devoted to the purchase of warships."

The Niger district in Africa may yet become an important source of supply of coffee for Europe and the United States. The curator of the botanical gardens at Old Calabar says that the experimental work at the gardens includes the propagation of coffee plants for distribution to the natives, and that a large piece of bush that adjoined the gardens has all been cut down to form a coffee plantation.

RECENT LEGAL DECISIONS.

[Prepared expressly for BRADSTREET'S.]

Nuisance—Building—Coaling Station.

The Supreme Court of Indiana held, in the recent case of Dalton vs. Cleveland, Cincinnati, Chicago & St. Louis Railway Company, that the erection of a building, not itself a nuisance, cannot be enjoined solely because the avowed purpose of the defendant in erecting it is to put it to a use which will constitute a nuisance, and that a coaling station upon a railroad, built wholly upon its right-of-way, is not, of itself, and apart from the use to which it is put, a nuisance.

Railroad—Accident—Negligence.

In the case of Murray vs. The Fitchburg Railroad, which was an action to recover for the death of the plaintiff's intestate, who was crushed between a bunting post and a car in consequence of the engineer of a switching engine pushing a car along the track and against standing cars, the Supreme Court of Massachusetts held that it was a question of fact for the jury upon the evidence whether the defendant's servants were not grossly negligent in pushing back the car so as to strike the standing cars with so much force.

Railroad—Ticket—Agency—Damages.

In the case of Scott vs. Cleveland, Cincinnati, Chicago & St. Louis Railroad Company, recently decided by the Supreme Court of Indiana, it appeared that the plaintiff applied at the Union Station in Indianapolis for a ticket over the Vandalia Railroad to Greencastle, intending to transfer at Greencastle Junction to the Monon for carriage to her home. The agent gave her a ticket over the Big Four road, and she being unable to read because of defective eyesight, and being directed to a Big Four train, got upon that train. At Greencastle she remained upon the train, expecting to get off at Greencastle Junction, but the train did not stop until it reached Terre Haute, where she was put off half a mile from the depot. The court held that in selling her the wrong ticket the agent acted as agent of the Vandalia road; that after Greencastle was passed plaintiff could no longer claim the rights of a passenger without paying additional fare, and that, therefore, the defendant was not liable to respond in damages.

Insurance—Policy—Stipulation—Note.

The Supreme Court of Georgia held, in the recent case of Dunn vs. Abrams, that although a policy of life insurance stipulated on its face that it should not take effect until the first premium was paid, it was not rendered invalid because the application signed by the insured before he received the policy (and which was copied in and made a part of the policy) stated that the first premium had not been paid, when, as a matter of fact, the first premium was, before the delivery of the policy, paid to the company by the agent who wrote the insurance, and the payment of such premium by the agent, in pursuance of an agreement between him and the insured, was a valuable consideration for a promissory note given to the agent by the insured, and that a statement by an insurance agent that the first premium upon the policy would be $213, when in fact it was $222.50, was not such a misrepresentation as would make void a promissory note for the former sum given by the insured to the agent, who, by agreement, paid the first premium and sought to collect from the insured only the amount of the note.

Limits of Criticism—Publication.

In the case of Dowling vs. Livingston, recently decided by the Supreme Court of Michigan, and reported in the Chicago *Legal News*, the rules of law as to the range allowed critics in the discussion of published works were considered. The court said: "No malace was shown on the part of the defendants unless it is fairly deducible from the article itself. On the contrary, it appears to be conclusively established that the defendants did not entertain any malice toward him, and that the book was placed by them in the hands of their critic, who wrote the article, without any comment or instruction. When an author places his book before the public he invites criticism, and however hostile that criticism may be, and however much damage it may cause him by preventing its sale, the critic is not liable in an action for libel provided he makes no misstatement of any material facts contained in the writing and does not attack the character of the author. The book and the criticism are both before the public. The language we used in Belknap vs. Ball, 83 Mich. 589, applies to this case. 'When language is truthfully stated the criticism thereon, if unjust, will fall harmless, for the former furnishes a ready antidote for the intended poison. Readers can then determine whether the writer has, by the publication, libeled himself or the candidate. When the language is falsely or maliciously stated, privilege ceases to constitute a defense.' * * * The rule of law in such cases is clear. In applying to it the present case we find that the personal character and reputation of the author are not attacked. His theories are. In no material matter is there any misstatement of fact or of the propositions set forth in the book. The critic was at liberty to attack or denounce them with sarcasm and ridicule."

Lease—Covenant—Injunction.

The case of Browne et al. vs. Niles et al., recently decided by the Supreme Court of Massachusetts, arose upon an application for an injunction. The plaintiffs brought a bill in equity to enforce certain covenants in a lease, which were to the effect that the defendants would not "make nor allow to be made any unlawful, improper or offensive use" of the premises, "nor any alterations or additions during the term without the consent of the lessors," and that they "will be responsible and will pay all damages and charges to the city government or others for any nuisance made or suffered on the premises during said term." The buildings were occupied under the lease by the defendants, who were doing a pork-packing business. In the two floors of the building they had cut apertures 3½ feet wide and 9 feet long, removing the cross timbers and flooring and covering the apertures with trap-doors with hinges. The court did not decide whether the making of these apertures was an alteration within the meaning of the lease, but held that if it were a violation of the lease, the plaintiffs had not only their action for breach of the contract, but also their right to terminate the defendants' estate. The plaintiffs also complained that the defendants maintained a nuisance in the cellar of the building, caused by the business which they carried on. The court held on this branch of the case that they were not entitled to an injunction enjoining the defendants from permitting or continuing the nuisance, because the plaintiffs made the lease with full knowledge of defendants' business, which was being carried on in the same premises, and with full knowledge of the uses to which the premises would continue to be put, and for the reason that the actual use of the premises was found to be no worse than was necessarily incident to the business which was contemplated when the lease was made.

Receivership—Conflicting Jurisdiction.

In their order denying the application of the Farmers' Loan and Trust Company to have Receiver Burleigh removed and Messrs. McHenry and Bigelow, the receivers appointed by Judge Jenkins at Milwaukee, placed in his stead for the states of Washington, Idaho, Oregon and Montana, Judges Gilbert and Hanford, sitting in the United States Court at Seattle, Wash., said: "This court reserves the right at any time, upon the application of any person or persons interested, or upon its own motion, to make such orders and decrees as it shall seem just for the protection of the creditors of the railroad company residing within its jurisdiction. * * * In the order of the circuit justice, the power of this court to do whatever may be by the court deemed essential for the protection of the rights of the creditors of the corporation residing within the district for which this court is held is expressly reserved, and it is our opinion that it is necessary, in order to secure the creditors the right to commence and prosecute actions against the receivers in the courts of this state or in this court, to have for a receiver a person who will under all conditions submit to the control of this court, recognizing its power to appoint and remove. We believe, therefore, that the present application cannot be granted without an absolute sacrifice on the part of the court of the powers and prerogatives which belong to it, and which are necessary for the protection of the rights of the people entitled to invoke its jurisdiction. The rule of comity does not require of a court exercising ancilliary jurisdiction any such abdication of its discretionary powers. McHenry and Bigelow being non-residents, and almost constantly absent, creditors must, to enforce any demand against them, seek another forum, for if this court cannot call the receivers to account for their conduct, it will be without power to compel them to appear in the courts within this state in answer to any process. In view of the past experience, we are not willing to appoint as receivers persons who will not recognize the power of the court to control them in the administration of their trust."

BUSINESS NOTES.

The British National Debt.

The forthcoming volume of "Burdett's Official Intelligence" (London) for 1896 contains an article on The Sinking Funds of the National Debt. "It is pointed out that the net reduction in the debt since 1875 is £85,000,000 pounds, or £4,250,000 a year. There are, of course, arguments for continuing a policy which has resulted in so great a reduction of debt, provided that circumstances are unchanged. But circumstances have changed in some important respects during the last few years, or even months, and a rigid adherence to the existing rules of finance may properly be relaxed in order to provide for national defense."

New York as a Grain Market.

The secretary of the New York Produce Exchange has prepared a report on the receipts and exports of grain at that port covering a period of twenty-five years. The receipts by canal were 48.20 per cent. in 1880 and 16.71 per cent. of the total of grain received in 1895, the latter being the smallest percentage in any year. In 1894 nearly 50 per cent. of grain was received by canal, and the percentage ran from 20.15 to 49.82 annually. The receipts by railroad were 49.99 per cent. of the total in 1880, but they have almost constantly increased except during 1887 and 1888. Last year the percentage of receipts by railroads was the highest, 82.77 per cent. By river and coastwise the percentage of the total receipts was 1.81 in 1880, 2.68 in 1884 and 0.52 in 1895.

Canadian Pig Iron.

Though Canadian pig iron continues to be quoted at $17.50 to $18 for Ferrona and Siemens brands at Montreal, "it is purchasable at lower prices. The market is easy. All the governing influences point to a still lower plane of value. First, there is the decline in the United States. In the next place, it is now the season when stocks are usually replenished, or rather when engagements are made for replenishment. The home producers are naturally on the alert in their mutual competition to get hold of as much of the business as possible, and are keeping their eyes open to prevent a repetition of last spring's experience, when salesmen came across the border and loaded up the chief buyers with large stocks at unprecedentedly low prices. Further, the fact that a new furnace has been started in Hamilton operates to modify the stiffness of prices."

Australian Wool Production.

In the course of a report to the State Department upon the wool product of Australia and Tasmania, United States Consul Bell, at Sydney, says the exports last year were 1,579,225 bales, against 1,522,823 during the previous year. This increased export, however, does not mean an increased production, as there was an unusually large portion of the former year's crop carried over and shipped in 1895, and though prices are a penny per pound higher, the wool grower is little better off, owing to the many vicissitudes of the season. There will be a considerable falling off in exports all through this year, and especially in the early months, as the clip of 1895 was fully 15 per cent. short, and owing to low prices of wool, fully 2,500,000 sheep were boiled down. There is little hope that the clip of this year will show any increase either, and a considerable deficiency is expected in the year's exports if the shearing season is late. Last year, owing to drouth, there was a serious deficiency in the number of lambs, which was only 18,000,000, against 28,000,000 for 1894.

Our Coal Supply.

In the March number of the New York *Bond Record* is an article on anthracite coal by William Griffith, which seeks to answer the questions: "How much anthracite is there, and how long will the supply last?" and "What proportion of the future supply do the various interests control, and how much can they ship to market?" Mr. Griffith begins by quoting liberally from an article by President Harris, of the Reading Railroad, on this question, in which Mr. Harris estimated that the original contents of the anthracite fields amounted to about 14,453,400,000 tons, of which 82½ per cent., or about 11,921,400,000 tons, remained to be worked. With a production of 45,000,000 tons a year this supply would last for 265 years, although Mr. Harris estimated that of the actual coal unmined only 5,960,700,000 tons would probably be actually available, which would shorten the period of use one-half. Mr. Harris said we could have coal for 100 years at the rate of 60,000,000 tons a year. Mr. Griffith, in his article, which is an elaborate one, accompanied by long tables and detailed maps, works out estimates on a basis of his own. He gives a tabulated estimate of the approximate future supply of the railroads entering the Wyoming region. He claims that Delaware and Hudson's supply, at the rate of 1895 shipments, will last 26 years; Ontario & Western's, 9 years; Erie Railroad's, 21 year's; Susquehanna & Western's, 18 years; Pennsylvania Coal Company's, 54 years; Lackawanna's, 51 years; Lehigh Valley's, 57 years; Central New Jersey's, 124 years; Pennsylvania Railroad's, 52 years. The grand total of unmined coal in the Wyoming region he estimates at 1,278,130,750 tons, with a duration of 52 years. The table gives no figures as to other coal fields.

Metal Working in Germany.

Frank Mason, United States consul-general at Frankfort, in a special report to the State Department, tells how the Germans are steadily mastering the English metal workers, and he suggests that in the story may be found a lesson for American steel and iron workers, especially in that part relating to the systematic cultivation of foreign trade. The report is based upon the findings of a commission of British iron and steel workers, which has made a most exhaustive examination of the factors in the competition, and the facts developed as set out by Mr. Mason are of the greatest importance to all manufacturers. Briefly summed up, it appears that the Germans enjoy distinct advantages over the British iron and steel workers in more disciplined labor, highly educated and competent management, harmonious cohesion between operators and assiduous success in the cultivation of foreign markets, low royalties, rents and protected home market, and above all far cheaper inland transportation. In all these respects the Germans exceed American manufacturers in the same degree that they do the British.

Industrial Birmingham.

An English writer states that "there is no town in the United Kingdom, and probably none in the world, that has, either in itself or in its immediate neighborhood, such a great variety of industries as Birmingham. Those industries embrace not only the manufacture of iron and steel in their semi-finished or less highly perfected forms, but also the manufacture of almost every description of finished product, up to pens and pins. It is a long story, this general establishment and concentration of what are called Birmingham industries in one locality. The choice of Birmingham for this purpose was probably a matter of accident rather than deliberate design. At any rate, from the point of view of the distribution of the products of its industries, it is manifest that no manufacturing center could be more advantageously situated, apart from the cost of transport. And the cost of transport is mainly a serious matter when manufactured goods have to be carried a long distance for export, while the fact is that in the Birmingham district a large part, if not the greater part, of the goods manufactured are more or less the raw material of other industries carried on in the locality."

Agricultural Depression in France.

Mr. Edmund R. Spearman, writing from Paris on the 21st instant, emphatically contradicts Mr. James Lowther's statement in the House of Commons that the experiment of protection in France had been singularly successful. Mr. Spearman has had occasion lately to devote a considerable time, in loco, to studying the state of agriculture in France. The *Journal Officiel* for the 4th and 28th of December last, containing the reports of the discussions on the agricultural budget, shows that the depression is almost as acute in France as in England. Deputy after deputy and senator after senator pointed out the deplorable state in which the French agriculturist found himself, but not one to extenuate or to contradict their statements. Among other things he points out that in 1885 a duty of 3 francs per quintal (220 pounds) was imposed on all wheat imported; in 1887 that duty was raised to 5 francs, to be further increased to 7 francs in 1894. In 1877 the price of wheat per quintal was 30.01 francs; in 1887, 23.41 francs; in 1890, 24.98 francs; in 1893, 21.38 francs; in 1894, 19.85 francs. In January of this year the quotation in Paris was 17.40 francs, whilst the London value of a similar quantity was 14.30 francs, the difference between the two representing less than half the import duty of 7 francs. The causes of this slightly better state of affairs in France are the organization of agricultural education, the proprietary interest of the workers of the soil, the notable thriftiness and business-like habits of the women, the attention paid to minor products and coöperation.

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

SHOWING STOCK OUTSTANDING, BONDS, MILEAGE, LAST DIVIDENDS AND TOTAL SALES, WITH RANGE OF PRICES IN 1895 AND 1896.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The only conspicuously favorable feature of the general business situation is found in BRADSTREET'S report of February gross railway earnings throughout the country. Receipts of 126 companies last month were larger, with a single exception, than in any preceding month for more than three years, the February total, 1896, being $34,484,000, a gain over that total last year of nearly 14 per cent. In January gross earnings this year were about 11 per cent. larger than a year ago, and in February, 1895, they decreased 2.3 per cent from that total in 1894. These results are due in part to favorable weather conditions in February, large grain traffic, and the inclusion of one more business day. Heaviest gains in gross earnings last month are reported by the grangers, the Pacifics and southern lines in the order named, with from 22 to 20 per cent. larger totals than in February last year. The smallest increase is reported by the coal roads. Other groups report increases ranging from 5 4 per cent. for the eastern roads to 10 per cent. for southwesterns. The trunk-line increase was nearly 7 per cent., and that of the central westerns 7.5 per cent. More than three-fourths of all the companies reporting show gains compared with the February totals a year ago, and 23 of the companies show February increases this year in excess of $50,000 each. For two months total gross earnings of the railways referred to amount to $72,217,000 in 1896, or 12.3 per cent. more than in the first two months of 1895. The increase for the entire calendar year 1895 over 1894 was only 5.2 per cent.

The week's total bank clearings, $943,000,000, continue their see-saw movement, without special tendency. Contrasted with a week ago, this week's total is 11 per cent. smaller, but 5 per cent. larger than in the second week of March, 1895, 10 per cent. larger than in the corresponding week of 1894, but 23 per cent. smaller than in the like week of 1893, 21 per cent. smaller than in 1892, but only 5 per cent. less than the like total in 1891.

General trade shows no marked changes. Distribution of merchandise is most active for dry goods, hardware, shoes and millinery, paints, oils and heavy chemicals, but has been unsatisfactory. Jobbers report spring trade of a waiting character, due to belated snowstorms and unusually cold weather. Collections, with few exceptions, are no better, and in many instances less satisfactory, which tends to retard the movement of merchandise. Building operations at some eastern points are not as active as anticipated. Dealers in shoes south and west report trade slow, and eastern makers admit orders are increasing slowly. The cotton goods manufacturing industry is unsatisfactory, with a slack demand and heavy stocks. Production has been restricted and a further shutdown is talked of. Prints and ginghams are most active. Transactions in raw wool are limited and the market is very dull, with less business than at any previous time since January 1. Iron and steel are as quiet as in preceding weeks, and in some respects less favorably situated. Orders for steel at Chicago have decreased, and the price is barely steady. Demand for pig iron is the slowest since January 1. Quotations at eastern markets, nominally unchanged, could probably be shaded on new business. No agreement has been reached on ore products for 1896 delivery. Production of pig iron was restricted about 40,000 tons during February, but stocks increased nearly 70,000 tons in the face of it. From all this, the general trade situation throughout the country may be regarded as less satisfactory at the middle of March, 1896, than had been anticipated Even prices of staples have refused to make and maintain advances. Among decreases in quotations are those for flour, wheat, Indian corn, oats, lard, print cloths, steel and pig iron, while prices of wool, leather, coal, pork and sugar are nominally unchanged. Coffee is higher, but not based upon domestic conditions affecting demand. The improvement in the actual demand for cotton at home and abroad is back of its advance. Petroleum, also, is higher, as are lead and nails at western centers, where the demand has improved.

Business failures in the United States this week fully maintain the ratio of commercial embarrassments reported of late, with a total of 282 for six business days ending with March 12, compared with 270 in the preceding week, 262 in the corresponding week one year ago, 231 in the second week of March, 1894, 221 in the corresponding week of 1893, and with 219 in the like week in 1892.

Total exports of wheat (flour included as wheat) from both coasts of the United States during six business days ending with March 12 amount to 2,401,000 bushels, against 2,407,000 bushels last week, 2,791,000 bushels in the corresponding week last year, 3,258,000 bushels in the second week of March, 1894, and as compared with 2,886,000 bushels in the like week of 1893. Total exports of Indian corn in the same week amount to 1,708,000 bushels, a little more than 1,000,000 bushels less than in the previous week, and as compared with 882,000 bushels in the like week last year, and with 1,278,000 bushels in the corresponding week of 1894.

At the south, Augusta jobbers in shoes and dry goods report satisfactory spring sales, and Atlanta a larger volume of business than in the corresponding week last year. New Orleans jobbers regard the prospect for a good trade, with steady weather, while at other points, particularly Texas, the trade movement is moderate and collections are unsatisfactory. Least favorable reports concerning collections are from the west and northwest. Telegrams from the state of Washington explain that reports of damage to fruit and grain by frost have been exaggerated. Tacoma has received large quantities of cotton for export.

Complete inactivity prevails in the New York market for railroad securities. The speculative undertone, however, is steady, and the movements of the week have been confined to advances in certain industrial stocks. Heavy covering by the bears in American Tobacco caused a sensational rise in that stock, and General Electric was strong on an arrangement with its chief competitor for a harmonious use of patents. Bonds are dull and firm. Foreign exchange is unsteady on the very limited inquiry. Demand sterling 4.87¾ @4.88.

Trade advices from Montreal are rather better than last week, based on the general merchandise movement to the country districts, but not much improvement is likely in that province until after navigation opens. Similar conditions prevail at the city of Quebec, where, as at Montreal, mercantile collections are unsatisfactory. The movement of merchandise from the hands of Toronto jobbers continues without feature and prices remain unchanged. Merchants at Halifax report some slight improvement and the outlook for fishstuffs good. The Nova Scotia country trade, however, continues very dull, owing to heavy country roads. Business failures throughout the Canadian Dominion this week number 58, against 66 last week, 39 in the week a year ago, and 45 two years ago. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $18,478,000 this week, against $17,121,000 last week, and slightly larger weekly totals in the corresponding weeks one and two years ago.

FINANCIAL.

The Money Market.

Apart from some alleged discrimination in regard to the quality of offerings of commercial paper, the New York loan market presents no fresh features. Conditions seem, if anything, easier. The demand for currency at Chicago has practically ceased, and the pressure in the Boston and Philadelphia local money markets no longer exists. At the latter center, indeed, New York funds, which lately commanded a heavy premium, are reported at a slight discount once more. It is, however, understood that interests in both the cities mentioned have been large borrowers here of funds on call and on time. In the New York market call money has been easy and plentiful at 3@3½ per cent., and time money is placed by a great variety of lenders at 3½ @4 per cent. for thirty to ninety days, and 4@4½ per cent. for longer periods. The business in commercial paper is limited. There is no very large amount offering, and the buyers at present in the market, comprising both local and out-of-town interests, show little disposition to handle any but the best classes of names. Rates are quoted at 5@5½ per cent. for best names and indorsed bills receivable.

The Boston Banks.

	Mar. 7, '96.	Feb. 29, '96.	Changes.	
Loans	$157,965,000	$158,962,000	Dec.	$597,000
Circulation	9,583,000	9,402,000	Inc.	181,000
Deposits	93,161,000	94,470,000	Dec.	1,309,000
Due from reserve agts	16,624,000	16,414,000	Inc.	472,000
Legal tenders	5,187,000	5,285,000	Dec.	98,000
Specie	8,245,000	8,573,000	Dec.	328,000
Surplus reserves	879,600	1,098,143	Dec.	218,543

The New York Banks.

Last Saturday's statement of averages displayed no important changes. Specie increased $1,234,100 and legal tenders decreased $2,603,700, a net loss in cash holdings of $1,369,600. There was a further gain of $1,967,000 in loans and a decrease of $727,800 in deposits, the result of the other changes being a reduction of the surplus reserve by $1,187,650. The averages for the week seem, however, to be more than usually at variance with the known movement of money, the banks having lost no less than $5,000,000 to the Sub-Treasury, while there was a gold shipment of $500,000 to South America during the week. It may also be noted that since the bond subscription closed about $79,000,000 has been paid into the Sub-Treasury at New York, of which, however, $21,000,000 was left with the depositing banks. But while $58,000,000,

about, has actually gone from the banks to the Treasury since the beginning of February, the banks in the same period have only lost $18,000,000 in their average cash holdings.

The figures of last Saturday's statement compare as follows with those of the preceding week:

	Feb. 29, 1896.	*Mar. 7, 1895.*	*Changes.*	
Loans	$462,521,900	$464,488,900	Inc.	$1,967,000
Specie	60,304,000	61,538,100	Inc.	1,234,100
Legal tenders	86,521,200	83,917,500	Dec.	2,603,700
Deposits	489,612,200	488,884,400	Dec.	727,800
Circulation	13,610,600	13,983,800	Inc.	304,200
Total reserve	146,825,200	145,455,600	Dec.	1,369,600
Reserve required	122,403,050	122,221,100	Dec.	181,950
Surplus reserve	24,422,150	23,234,500	Dec.	1,187,650

At the corresponding period last year the surplus reserve was $22,788,625, against $75,633,375 in 1894.

Silver.

The silver market has been dull and steady, the London quotation for bars being stationary after an advance from 31 5/16d. per ounce to 31 7/16d. The price quoted by local bullion dealers showed a corresponding improvement from 68⅝c. to 68¾c. The February rise in silver prices is now explained as the result of recent speculation at London in India rupee paper, necessitating large shipments thereof from India to London, and creating a corresponding demand for silver in the former country. The demand, it is explained, was met by an influx of silver from the United States. On Friday the markets were strong at a little further advance.

SILVER PRICES.

	Mar. 7.	*Mar. 9.*	*Mar. 10.*	*Mar. 11.*	*Mar. 12.*	*Mar. 13.*
London	31 5-16d.	31 3/8d.	31 7-16d.	31 7-16d.	31 7-16d.	31 9-16d.
New York	68⅝c.	68⅝c.	68¾c.	68¾c.	68¾c.	69c.

Foreign Exchange.

Narrow conditions have again marked the exchange market, though in the early portion of the week a little better inquiry from importers was noted, under which the rate for actual business in bankers' sight sterling advanced to 4.88¼. At the same time long sterling was stronger on the lowering of discount in London, and on Tuesday last the posted figure for that class was marked up ½c., to 4.88, making the quotations 4.88@4.89. The supply of bills is small, and the absence of drawings against securities was one of the features. On Wednesday and Thursday, however, the renewed nquiry dwindled away, and the market, without showing any pressure of bills, became so slow that on the last named day the actual rate for sight fell to 4.88, and posted rates for both long and short were reduced ½c., to 4.87½@4.88½. On Friday the market was inactive and lower, without any change in posted rates.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 7.	*Mar. 9.*	*Mar. 10.*	*Mar. 11.*	*Mar. 12.*	*Mar. 13.*
4.87½ @ 4.89	4.87½ @ 4.89	4.88 @ 4.89	4.88 @ 4.89	4.87½ @ 4.88½	4.87½ @ 4.88½

ACTUAL BUSINESS BANKERS' SIGHT STERLING.

4.88 @ 4.88	4.88 @ 4.88¼	4.88 @ 4.88¼	4.88 @ 4.88¼	4.88 @ 4.88	4.87¾ @ 4.88

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.86¾ @ 4.87	4.86¾ @ 4.87	4.87 @ 4.87¼	4.86¾ @ 4.87	4.86¾ @ 4.87	4.86¾ @ 4.86¾

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88@4.88¼; commercial bills, 4.86@4.86¼; francs, 5.18⅛@5.16¼; reichsmarks, 95@95 7/16.

The Bank of England rate remains unchanged at 2 per cent. The bank this week lost £85,000 in specie, but the proportion of reserve rose to 62.46 per cent., against 61.83 per cent. last week. In the London open market money is almost a drug at ¼ per cent. on call, and discount is weak at 11/16 per cent. The plethora of money there is illustrated by the fact that consols sold this week at 109 13/16, ex-interest, the highest price on record.

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending March 6, 1896:

	1896.	1895.
Dry goods	$3,290,816	$3,143,840
General merchandise	6,287,704	6,750,070
Totals for the week	$9,578,520	$9,893,910
Previously reported	93,520,022	90,116,375
Since January 1	$103,098,542	$100,010,285

The exports (exclusive of specie) from New York to foreign ports for the week ending March 10 were $989,870 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,012,827	$6,694,915
Previously reported	68,673,220	61,977,238
Since January 1	$76,686,047	$68,672,153

The total value of the exports of breadstuffs, mineral oils and provisions from the United States during the month of February, 1896, and during the eight months ending with February 29, 1896, as compared with the corresponding periods of the preceding year, according to the Chief of the Bureau of Statistics, Treasury Department, were as follows:

FEBRUARY.

	1895.	1896.
Breadstuffs	$6,844,873	$13,017,408
Mineral oils	3,162,356	3,975,059
Provisions	13,505,163	12,190,732

EIGHT MONTHS ENDING WITH FEBRUARY.

Breadstuffs	71,279,283	92,583,912
Mineral oils	28,577,542	41,204,506
Provisions	110,569,049	107,204,910

The total value of the exports of raw cotton from the United States for the month and the six months ending with February 29, 1896, with comparisons for similar periods in 1895, were as follows:

FEBRUARY.

1895	$13,258,817
1896	22,387,995

SIX MONTHS ENDING WITH FEBRUARY 29.

1895	$151,607,354
1896	141,112,002

THE STOCK MARKETS.

The New York Stock Market.

Intense dullness has reigned in the general stock market during the week. Public and foreign participation have been virtually non-existent, and the trading has been entirely in the hands of professional operators of the smaller type. Uncertainty about the action of Congress on various public questions, the lack of any decided revival of activity in trade, and the fact that crop prospects for the coming season are necessarily a matter of doubt, all tend to limit the speculative market's movements. At the same time the tone has been strong rather than weak, and the sole features have been supplied by eccentric demonstrations on the part of some of the industrial stocks. In all such cases the movement of prices has been upward, and the bear interest have been the sufferer, the noteworthy instances being furnished by Tobacco and General Electric. As already indicated, London has not been a factor in this market. In fact, there is a complete lull in speculation of any kind there, the glut of idle money tending to force investment into securities which have attained abnormally high prices. British consols this week sold at 109 13/16, ex-quarterly interest, being the highest price on record. At the same time that there is some disposition in London to pay more attention to the better class of American securities, the attitude of Congress and fears connected with the approach of our presidential canvass seem to check buying from that source, and the fortnightly settlement on the London Stock Exchange, completed this week, showed a remarkably small account open in Americans.

Attention has mainly centered in the before mentioned industrials. Of these American Tobacco common made the most striking record. Opinion on the stock has been bearish to an increased extent, owing to the belief that the combination was between the outside manufacturers of plug tobacco and cigarrettes, and the so-called trust was severely affecting the latter's earnings. Rumors, indeed, were circulated that the passing of the next, or May, dividend on the common stock was inevitable, and a very large short interest accumulated, under which the stock at the close of last week declined to 71⅝. At this point a movement directed against the bears began, and under enforced covering the price crept up to 75⅛ on last Tuesday. The succeeding day was, however, signalized by a fairly sensational market for Tobacco. Rumors of conferences for the settlement of the trade war appeared, and though, totally unconfirmed, they were supported by very large buying orders. Under these circumstances there was a bear panic in the stock, which sold up to 82¾, and the transactions in it amounted to over 200,000 shares, or over two-thirds of the entire day's business on the Stock Exchange. The movement, however, soon spent its force; nor does there as yet seem to be a substantial basis for the reported settlement. The price of Tobacco, after receding to 78¼, was relatively steady at between that figure and 82.

The next stock in point of importance was General Electric, which developed great strength and activity, and advanced from 32⅞ to 39½ on the anticipated settlement of differences between the company and its chief rival in field of electric appliances—the Westinghouse Company. This arrangement, which was formally ratified and announced on Thursday evening, is the direct result of the legal victories gained by the General Electric in the suits to determine the validity of the patents covering the trolley and motor mechanism now in general use which are controlled by that company. The Westinghouse Company also owns very valuable patents, and it now is virtually agreed that the two concerns shall virtually pool their interests in patents, each paying a royalty for the use thereof. Further economies in respect to competition are expected to result to both concerns. There was naturally a reaction in General Electric stock on sales to realize speculative profits, the stock declining to 37½, but rallied slightly.

Baltimore & Ohio regained ground from its recent depression on the covering of the large short interest created in the recent decline. The price advanced from 13⅞ to 18, which point was touched on Tuesday. Since that time there has been further reaction in it. The declaration of a 2 per cent. half-yearly dividend in St. Paul common, in lieu of the 1 per cent. dividend six months ago, was fully expected, and had little or no effect on the stock. Northern Pacific stocks were weak on Friday on anticipations of a heavy assessment in the coming reorganization.

Boston Stock Market.

(Special to BRADSTREET'S.)

The market has shown less activity, the tone ruling quiet during a larger part of the week. Railroad shares have been steady, Chicago, Burlington & Quincy closing 1¾ points higher, with West End ¾ point up, while Atchison and Mexican Central declined a trifle. In copper stocks Boston & Montana closed a fraction higher, while Butte & Boston declined 1 point, the stock being very nearly wiped out. Sugar shows good strength, although operations were less active. United States Leather has been dull. General Electric has been active and higher.

Prices of principal shares, with volume of transactions, have been as follows:

	Price Mar. 12, 1896.	*Price Mar. 5, 1896.*	*Sales Mar. 12, 1896.*	*Sales Mar. 5 1896.*

GENERAL TRADE QUIET.

(Special to BRADSTREET'S.)

Larger Eastern Cities.

Boston, March 13.—Business continues quiet in nearly all merchandise lines, with the outlook rather depressive. The demand for money is less active, with lenders cautious, although some signs of more confidence are noticeable. The market for commercial paper is narrow, with about 5½@6½ per cent. as the general range of sales. Time money is plenty where collateral is gilt edge at 4¾@5½ per cent., according to time and collateral. The boot and shoe trade is getting into better shape as regards orders being booked, but buyers are yet operating largely in samples as a rule, with the intention of ordering later if the market holds. Prices are low where any free orders are placed. Leather is quiet but steady, with hides dull but in small supply. Iron and steel are quiet and easy. Lumber is steady, but the movement is quiet.

Philadelphia, March 13.—Wool and cotton yarns continue quiet. There is a fair demand for dry goods, but not much prospect for greater activity until more settled weather. Petroleum is firm, with better prices. Drugs, glass and paints are in fair request. There is a moderate demand for sugar; prices are firm. Coffee is being held for higher prices. Lumber sales are light; the season is not favorable for building operations.

Pittsburgh, March 13.—No new features are noted. A fair volume of business is being done in all staple lines, and prices are fairly well maintained. Complaints regarding collections are heard on all sides; this retards general business. Very little business is being done in iron, and prices have not changed materially but appear some firmer, and dealers express the opinion that business in this line will shortly show some improvement.

Baltimore, March 13.—Business has been lively, quite a number of southern buyers being in the market. There has been a marked improvement in collections this week.

West and Northwest.

Cleveland, March 13.—There are no specially new trade features. The week's general merchandise movement is fair. Iron and steel markets are quiet. Collections are not satisfactory. General prospects are thought fair.

Detroit, March 13.—The trade situation is devoid of any special feature. Business in most lines is reported fair for the season, but collections continue unsatisfactory.

Chicago, March 13.—The cold, snowy weather has checked the spring trade a little, but sales of jobbers in all lines show a fair increase over the previous week. Interior buyers are here in good numbers and are making fair purchases. The mail business is also good. Light hardware shows more life in the way of seasonable goods, and there is a fair call for bar iron. Orders for steel of all descriptions have fallen off, and the market is barely steady. Pig iron is the slowest since January 1. Southern irons are weaker, but northern steady. Mine owners have not reached an agreement with furnace men regarding the price of ore. Lumber is slow and local prices unsettled on common. Produce is slow, but prices firmer for poultry and potatoes, but easy for eggs and butter. Wool receipts, 98,970 pounds.

Louisville, March 13.—There is a seasonable demand for general merchandise. Special mention is made of dry goods, hardware, boots and shoes and millinery. Manufacturers of wagons are reported in active operation. Leaf tobacco is quiet. Slight improvement in spices for lower grades is noticed.

St. Louis, March 13.—Demand for dry goods, boots and shoes, hardware and general staples continues good; otherwise the situation is practically unchanged and is of a waiting character. Paints, oils and heavy chemicals generally show a betterment with the advent of spring. Nails have advanced 15c. Lead shows a continued improvement both in demand and in price. Agents for pig iron furnaces report a moderate business at weaker values. Tin is low, owing to excessive competition of American makers. Iron and steel are unchanged. Black and galvanized sheets are a little lower. Collections are only fair.

Kansas City, March 13.—Wholesale houses are having a good trade, especially dry goods and boots and shoes. The live stock market is liberally supplied, and prices are low.

Milwaukee, March 13.—There is no material improvement in the general tone of trade, which continues quiet. Collections are unsatisfactory.

St. Paul, March 13.—The dry goods trade report an increase over last year this week. This is also true of boots and shoes, hats and caps, etc. Millinery is a trifle disappointing, due to the weather. Hardware is fairly active, with good prospects. Collections are poor.

Minneapolis, March 13.—Trade in most lines is reported by jobbers as fair and collections about the same. Flour and lumber are quiet.

Omaha, March 13.—The jobbing trade report business quiet. Orders continue light, but there is a slight improvement in collections.

Southern Cities.

Charleston, March 13.—Trade in all lines is quiet.

Savannah, March 13.—Local trade reports a very fair week of business, with good collections. Spirits and rosin are coming in slowly. Spirit prices are on the decline. Rosin is on the incline. Former market is firm, latter quiet.

Atlanta, March 13.—Trade, while lighter than for the past two months, is still in advance of last year. Collections are good, although a little slow compared with February.

Augusta, March 13.—There is a fair demand for staple groceries and provisions, with fairly satisfactory collections. Shoe and dry goods jobbers report spring sales satisfactory.

Jacksonville, March 13.—There is a heavy increase in sales over last week in retail circles. Otherwise there is no change.

Birmingham, March 13.—General trade is only fair; no special features. Collections are ordinary.

Chattanooga, March 13.—Business has not improved any during the past week. Collections continue fair.

Memphis, March 13.—General trade shows an improvement this week, especially in groceries and agricultural implements. Collections are fair.

New Orleans, March 13.—Jobbers report conservative buying by country merchants, but look for steady and healthy spring trade. There is a fair export movement of cotton. Louisiana sugars are being steadily taken by consuming markets. Rice is dull. Corn exports are decreasing.

Galveston, March 13.—There is only a moderate demand from the interior. Collections are poor.

Pacific Coast.

San Francisco, March 13.—Commercial lines are quiet; produce dull; freights firm; wheat weaker; exports heavy; weather conditions good, and collections fair.

Portland, March 13.—Clothing jobbers report trade duller than it has been for some time; the large retail stores notice a tendency among customers to ask less credit. Wholesale merchants find country orders coming in slowly and collections are difficult. City retail trade has been satisfactory for the past week, with prospects for larger sales next.

Seattle, March 13.—Damage to fruit and grain by recent frosts is less than anticipated, but worse than reported in early market reports. Lumber trade is brisk, with better prices. Hardware, feed and produce have increased. Groceries are about the same. Wheat receipts are light.

Tacoma, March 13.—Eastern lumber orders are very light this week, and foreign trade is restricted in anticipation of the competition of the combine and better prices. Produce is dull. Meats, groceries and hardware are more active. Grain is quite slow. An increase is reported in receipts of cotton for export.

Canada.

Toronto, March 13.—Business is unchanged. In wholesale circles there is a moderate movement, while prices of staples about hold their own. Prospects are fairly satisfactory.

Montreal, March 13.—A slightly better tone prevails. Collections are, however, not quite satisfactory. Shipments of general merchandise to interior points have been more active this week, which is accounted for by the fitting of orders which have been held over till after the 4th inst., pending the paying maturing acceptances. Country roads are bad, and much improvement is not expected until navigation opens. Quebec city reports somewhat similar conditions, with dullness more emphasized.

Halifax, March 13.—There are indications of a slight improvement in business. Flour, cornmeal and feeds are quiet; the outlook for fishstuffs is better and prices are firmer. The produce market is very dull. Sugar remains unchanged. Travelers report country buyers very conservative in their ideas. Roads throughout the province are in a bad condition.

Total Wheat, Corn and Flour Exported for the Week.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Dry Goods.

[Special to BRADSTREET'S.]

The market continues quiet as a whole, although in some departments a fair seasonable business is doing. The cotton goods situation is yet very unsatisfactory, owing to the dull demand and the surplus of goods on hand. The Amoskeag plant at Manchester is forced to shut down for a period, owing to damage by flood, and it will probably take a month or more to repair damages. This shutdown throws over 7,000 hands out of employment. Nearly all of the mills of Bliss, Fabyan & Co., making colored goods and denims, have shut down to half time because of the surplus and dull market, but the feeling among operators is that a further reduction in production will have to be made in order to infuse life into the goods market. Specialties in fancy prints and zephyr ginghams go well. Dress woolens are quiet, the mills being mostly employed in finishing up deliveries. Foreign dress goods for fall are being shown, but little will be done in domestic until the last of the month. Men's-wear woolens are quiet.

Wool.

[Special to BRADSTREET'S.]

Trade is very dull, with transactions smaller than for any week during the year. The London market holds firm, with the auction progressing favorably and offerings readily absorbed from day to day at full rates. English and continental buyers are taking the wool, however, as buyers from this side cannot compete. The demand for wool from American manufacturers appears to be at a standstill, from the fact that they have no business to warrant buying the raw material. With the European market firm and active, dealers are holding at about the former range of quotations, and are not attempting to press sales, as they realize it would be useless, until manufacturers are in a position where they desire to buy the raw material. Present quotations are largely nominal.

AMERICAN BREWING IN 1895.

The London *Statist* says: "The difference in method of payment of duty by brewers in the United States enables certain particulars concerning the business to be given with greater detail than is found elsewhere. The most notable distinction, and in some senses the most useful, is the returns giving the actual trading of every brewer. This ought to prove of very great advantage to shareholders in American breweries. Were the same return made concerning British breweries it would be of much use, in consequence of the very large number of breweries now trading as limited companies.

"The consumption of beer in the three chief beer-drinking countries shows on comparison that, whilst Britain and Germany are singularly alike, the United States still falls considerably behind, notwithstanding the rapid increase in beer drinking that occurred a few years ago in the States.

"In 'Tovey's Directory' the figures are thus given in United States barrels, which equal nearly twenty-seven gallons (English):

	1895.	1894.
Beer sold in Germany	46,317,184	46,511,439
" Great Britain	45,763,577	45,668,648
" United States	33,469,661	33,278,233

"There is no brewer in the States brewing a million barrels. The largest brewery is in Milwaukee, which produces under 700,000 barrels English, or over 900,000 barrels American.

"The following table shows the relative sizes of the breweries clearly:

BREWERIES IN UNITED STATES OF AMERICA.

No. brewers.	Capacity or trade done.
461	Under 1,000 Barrels (of 26.25 gals)
420	" 5,000 " over 1,000 Barrels.
345	" 20,000 " " 5,000 "
250	" 50,000 " " 20,000 "
132	" 100,000 " " 50,000 "
32	" 200,000 " " 100,000 "
11	" 300,000 " " 200,000 "
3	" 400,000 " " 300,000 "
4	" 500,000 " " 400,000 "
1	" 600,000 " " 500,000 "
1	" 700,000 " " 600,000 "
3	" 800,000 " " 700,000 "
1	" 1,000,000 " " 800,000 "
1,664	

From this table it is evident that more than one-fourth of the breweries are exceedingly small, and less than a fourth are large. The other half are of medium size. The way in which they are distributed over the States is interesting to the curious. Thus, New Hampshire has only five brewers, of whom four have large trades, and Louisiana has four only, all large, while Wisconsin possesses three large and 150 very small ones out of a total of 172. No less than twenty-three states have ten or less, and only two states have 200 or over, viz., New York and Pennsylvania."

INVITED TO SOUTH AMERICA.

A Washington dispatch to the Philadelphia *Press* says: "Brazil, Uruguay and the Argentine Republic have extended invitations through the State Department to the chambers of commerce and other trade organizations in this country to visit those three countries this year for the purpose of becoming familiar with their resources, with a view of increasing trade relations with the United States.

"The project arose out of conversation between the United States minister at Buenos Ayres and the Argentine Minister of Foreign Affairs. Brazil and Uruguay have joined in the movement, which is for a group of representatives of the leading commercial organizations of the principal cities of this country to visit those three countries this year.

"The invitations have been received from these three countries by Secretary Olney, who has put them in the hands of George W. Fishback, Secretary of Legation at Buenos Ayres, now on leave of absence in the United States, who will visit Philadelphia and other cities next week on this business.

"The chambers of commerce to which the invitations will be presented will probably be those of Philadelphia, New York, Boston, Baltimore, Chicago, St. Louis, Cincinnati and New Orleans, and whatever others may express a desire to join in the movement.

"When this matter was first suggested the

Argentine government responded at once and gave assurances that in case of the realization of the proposed visit 'the authorities of the nation' would be at the disposal of the distinguished visitors and every effort made to show them the country and make them familiar with its resources. The Uruguayan and Brazilian governments, through Ministers Stuart and Thompson, respectively, were addressed in like manner and responded in similar terms.

"These people are mindful of the treatment received by their representatives to the Pan-American Conference in 1890, and although the projected visit will not be made by an official body, the occasion will be taken advantage of to reciprocate in full measure the courtesies received in the 'States' six years ago. In the Argentine Republic the party will be received as guests of the nation. They will be taken on a special train through the great wheat belt, where the laborers make use of American harvesting machinery. They will then go into the province of Cordova, where long carpet wools come from, then to Tucuman, to visit the sugar refineries.

"Dr. Zeballos, ex-minister to the United States, will give the visitors a public reception, and others prominent in social and commercial circles will join in throwing wide open the door of Argentine hospitality.

"After completing the stay in Argentine a visit will be made to Uruguay and then up the coast 1,000 miles to Rio de Janeiro.

"The object of the trip is to show to representative men of the States the opportunities offered in these markets for American trade. The English have four banks in the city of Buenos Ayres, each with a capital of over 1,000,000 sterling; the Germans and French each have a bank and the Italians have two. Each of these nations has one or more direct lines of steamships to Buenos Ayres, and with frequent and quick service they find that the Argentine market is 'worth trying for.' They receive no tariff favors that the United States do not enjoy, but they have the steamship lines, which the United States lack.

"The Argentine government has expressed a willingness to subsidize a steamship line from Buenos Ayres to New York upon the slightest encouragement from the American Congress, and has offered to grant a charter to an American bank upon conditions that are not enjoyed by any European institution. In spite of all this the States do a business of only $7,000,000 a year, every cent of which pays tribute to England, in exchange, through English banks.

"The time selected for making the proposed trip will depend upon the action of the chambers of commerce, to whom the invitations will be delivered. The most suitable months would be June, July and August, for the reason that they are the southern winter months, when the thermometer remains steady around 60 degrees. The stay in South America will be about three months."

THE WORLD'S WINE PRODUCTION.

The *Moniteur Vinicole* has recently published a statement showing the wine production of the various countries of the world. From this statement it appears the yield in France amounted in the years 1895 and 1894 to 587,127,000 gallons and 859,162,000 gallons respectively; in Algeria to 83,549,000 and 80,124,000 gallons; Tunis, 3,956,000 and 3,936,000; Italy, 469,555,000 and 539,000,000; Spain, 379,500,000 and 528,000,000; Portugal, 43,890,000 and 33,000,000; Azores, Canaries and Madeira, 4,620,000 and 2,640,000; Austria, 66,000,000 and 88,000,000; Hungary, 63,030,000 and 46,103,000, and Germany, 80,190,000 and 110,000,000 gallons. In Turkey and Cyprus the production last year amounted to 52,800,000 gallons, and this compares with an average yield of 40,000,000 gallons. In Bulgaria the yield was 26,400,000 gallons; Servia, 17,600,000; Greece, 35,200,000; Roumania, 68,640,000; Switzerland, 27,500,000; the United States, 89,700,000; Mexico, 1,980,000; Argentine Republic, 29,700,000; Chili, 33,000,000; Brazil, 7,700,000; Cape of Good Hope, 2,420,000; Persia, 594,000, and Australia, 3,300,000 gallons.

GAS AND ELECTRIC LIGHTING IN BERLIN.

The London *Chamber of Commerce Journal* says: "Berlin is probably one of the best-lighted cities in Europe, and its consumption of both gas and electricity is far above the average. According to a recent German trade review, the central electric stations in Berlin supplied electricity for 5,673 arc lamps, 121,000 incandescent lamps and 667 motors, and the annual consumption of gas is 102,000,000 cubic meters. The lighting of the streets by gas dates from 1826, so that Berlin was some thirty years behind England and nine years behind Paris. It was an English company—the Imperial Gas Association—which from January 1, 1826, took over the street lighting for a period of twenty-one years, both gas and oil lamps being used. At the expiration of this term the town itself took the lighting in hand, and no trouble has, especially during the last thirty years, been spared to keep the lighting of Berlin to the front. Berlin, which now boasts about 1,725,000 inhabitants, is lighted by 25,332 gas lamps; of these 18,725 are ordinary burners, 6,003 are Bray burners, 55 Auer burners and 549 Siemens. Berlin has five gas works, with 3,005 retorts and 21 receptacles. The number of petroleum lamps for street lighting is about 1,200. The use of electric street lights dates from 1880. The authorities were not by any means in favor of electric light, but their objections were overcome, and in 1882 one or two of the principal thoroughfares were lighted by electricity. Six years later a move was made, the electric light being adopted for some of the most important streets and places. Berlin has now five central electric stations, in addition to which there are some three hundred private installations. This brings up the number of lamps to 10,537 arc and 203,532 incandescent lamps."

FARM ANIMALS IN THE UNITED STATES.

The *National Provisioner* says: "The statement of the Department of Agriculture on the number of farm animals in the United States has just been issued, and, if correct, which is unfortunately sometimes doubted of the department's reports, shows a very extensive falling off in the number and value of all animals, excepting cows and oxen. The total value of farm animals on January 1, 1895, was estimated at $1,819,446,000, against $1,727,926,084 at the same date in 1896, a decrease of $81,520,000. This is an astonishing falling off, and in view of the figures submitted it will no doubt strike many as peculiar that there should continue such a protracted stagnation in the meat and provision trades.

"In hogs a moderate increase in price is reported from Mississippi, Arkansas, Nebraska, South Carolina and eight comparatively unimportant states and territories. The six leading states all show decreases, which amount to 14 per cent. in Iowa and Missouri, the two at the head. South of Missouri, Kentucky and Maryland the percentages of decrease are generally small.

"In oxen and other cattle all states west of the Alleghanies and Mississippi river, with unimportant exceptions, report an increased value per head, especially marked in the eight leading states—Texas, Iowa, Kansas, Missouri, Illinois, Montana, Nebraska and Colorado. The demand has strengthened since the 1895 harvest, before which food was scarce and dear. In the Atlantic states there is little change from 1895, and correspondents still complain of low prices.

"In sheep Nevada, West Virginia, Tennessee, Virginia, Mississippi, Alabama, Kansas, Arkansas and four minor states report a lower value; Washington the same as 1895; and all the rest, including the sixteen leading states and territories, an increased value per head. The reason appears to be an improved mutton demand, although the general opinion after the passage of the Wilson bill was that the business of sheep-raising was killed thereby. We have always contended that our farmers could make money by growing sheep for mutton and making its production, instead of wool, the primary consideration. The possibilities for American mutton are just as good as they ever were for American beef, and perhaps greater. Our farmers would do well to study what Australia and Argentina are doing in this product and the progress made by those countries as exporters of mutton in the past ten years. Each year sees an increase in the volume of shipments, and we see no reason why the United States should not follow suit and establish a permanent export business."

COAL FOR EUROPE.

A Wilkes Barre special to the Philadelphia *Press* says: "Herman Barring, of this city, has recently been obtaining information for a syndicate, of which he is the leading spirit, regarding the amount of coal used in Germany, France and Holland each winter, the freight rates of shipping coal to these countries, and all other facts about shipment.

"The anthracite coal men of this and adjacent coal fields intend to ship coal to these countries in large quantities. English anthracite is now being used there, but the English coal barons could not compete with Pennsylvania's anthracite in supplying the continental countries of Europe.

"The rich people and the large manufacturing concerns of France, Germany and Holland are beginning to use anthracite on account of its being superior in many respects to bituminous coal, although England mines a fine quality of the latter. That anthracite coal is coming generally into use in European countries is proved by the fact that in Berlin last winter 2,500,000 tons of coal of all kinds were used, 350,000 tons of which was English anthracite, and English anthracite is far inferior to the quality mined in Pennsylvania. The increase in the amount of anthracite used last year over the preceding years was 75,000 tons. The price of bituminous coal in Berlin is $6 75, and of English anthracite $9 a ton.

"Mr. Barring has opened communications with 2,000 shippers of France, Germany and Holland who have vessels on the ocean, asking the amount of freight charged on coal, and other necessary information. Satisfactory answers have been received, but Mr. Barring is not yet at liberty to divulge the contents of the letters. One large steel manufacturing concern of Berlin has written to Mr. Barring asking him to forward average samples of the coal of these regions.

"It is expected that in a short time the Pennsylvania coal barons will be supplying coal in large quantities to the large manufacturers of Europe, and to many wealthy people who are using anthracite for reasons of cleanliness. When the shipping of coal across the Atlantic in large quantities is begun the coal trade in these regions will take on a big boom."

GERMAN VIEW OF OUR IRON AND STEEL INDUSTRIES.

The Berlin publication, *Kuhlow's*, says: "There is a not uncommon belief in Europe that the American iron manufacturers are engaged in building up fortunes 'beyond the dreams of avarice,' and that in this they have been greatly aided and abetted by the American customs tariff, which has for many years levied an average duty of 30 per cent. to 45 per cent. on all imported commodities. There is, however, in unfailing operation, a well-known law, which overrides all customs barriers, and displaces their otherwise inevitable results. It is the law which determines that capital shall be attracted to industries that yield exceptional profits, and withdrawn from investments that are less profitable. This law has now been working in the United States for a number of years past, until it would seem as if the average rate of interest on investments had fallen to a point very little above the average found in older countries, where the influence of protection was either less marked, or where it failed to operate at all. The United States census reports for 1890 showed that in that year over £82,000,000 sterling were invested in iron and steel works of every kind, and that, after deducting the amount of wages paid and the cost of the material used from the ascertained value of the total product, there appeared to be a remainder equal to the payment of an average dividend of 16.8 per cent. on the whole capital expenditure. But this, of course, is a mode of calculation that could not, under any circumstances, be expected to give approximately accurate results. A general average of profits in any country would be a misleading, if not an impossible, sum. Take, for example, the case of coal mining, where a strike would entail heavy outlay in keeping the pits clear of water, in keeping the ventilation in order, and in maintaining standing charges generally. None o this outlay would be apparent in such a rough and ready estimation as we have described. The same rules and principles would apply to the iron and steel industries, and in all industries alike there must be large allowances made for depreciation, for bad debts, for rates, taxes and other outlays which are not readily ascertainable, and which necessarily vary, not only as between one district or state and another, but as between different works in the same locality, as, for example, in two notable cases on the Tyne—the establishments of Armstrong, Mitchell & Company and Palmer's Shipbuilding Company—the one paying income tax and local rates on property nominally worth £2,000,000, but recently declared to be worth £3,000,000, and the other paying similar charges on a plant that would not, if brought to the hammer, realize anything like the sum at which it stands in the company's books.

"An attempt has recently been made by an American contemporary to arrive at a definite ascertainment of the returns that have been realized by shareholders in some of the larger iron-making companies in the United States, and it must be admitted that the record is a very sorry one. The Pennsylvania Steel Company—one of the very largest in the country, with splendid works at Sparrow's Point, on Chesapeake bay, and elsewhere—has paid no dividend for several years. The Cambria Steel Company—another of the largest and best equipped of American concerns—has only paid 4 per cent. dividend in some recent years. The Bethlehem Company, which makes armorplates and guns, and is on all fours in some respects with the Elswick firm at Newcastle-on-Tyne, has paid 12 per cent. on ordinary stock over a considerable period, but this is no better than, if so good as, the English firm named. The Tennessee Coal & Iron Company—one of the largest and most important of the new concerns brought to the front by the recent development of the iron and steel industries of the southern states—has only paid one dividend—of 1 per cent.—on ordinary stock for years; and the Colorado Fuel & Iron Company, at Pueblo, although it has a virtual monopoly of a large part of the business of the Pacific states, has not paid more than one dividend in its whole history. Scarcely more successful has been that gigantic organization of industrial interests known as the Illinois Steel Company, which usually employs from 12,000 men to 15,000 men, and has enormous plants in the neighborhood of Chicago, and elsewhere. The Illinois Company has a capacity for the manufacture of 1,398,000 tons of pig iron and 1,140,000 tons of finished material per annum, and it divides with the Colorado Fuel & Iron Company the great bulk of the business of the western, southwestern and Pacific states, to which it is nearer by about 500 miles than any other large concern in the middle or eastern states; and yet its ordinary shares have within the last two years fallen to one-half of their par value, and it has only paid three small dividends on ordinary stock for years. Of private investments, such as those of the Carnegie Steel Company, we do not know the facts well enough to be able to speak with equal confidence, but it is no secret that in the United States, as elsewhere, private establishments, as a rule, are attended with much more satisfactory results than those which pertain to limited companies. It is much the same in Germany, France and Belgium. A few concerns—like Schneider's in France, in the Phœnix Company in Germany, and Cockerill's in Belgium—secure excellent commercial results, but, generally speaking, the rank and file have to struggle along with low dividends or no dividends at all, and with properties that are greatly below nominal values."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 21, 1896.

There are some measures of a non-political character before Congress which one would think should commend themselves to even the most cautious political managers as affording an opportunity for escaping from the consideration of more exciting and hazardous matter. One of these measures is the bankruptcy bill, which has been under consideration since Congress organized for work. Some progress has been made with the measure, though not much. The sub-committee of the House Judiciary Committee has finished the preparation of a bill which, in all essentials, is understood to be based upon the Torrey bill as amended in recent congresses, and the measure now goes before the full committee, a report from which will probably not be long delayed. Still the advocates of a national regulation of bankruptcy may recall the fact that the bill has been progressed so far before only to fail of enactment at the end, and they will do wisely to exert whatever effort they can to make Congress see that in failing to enact the law it is tampering with the best interests of the business community.

Among the measures dealing with the postal service recently introduced in Congress is one providing for the reduction of the letter postage charge to one cent for each half ounce. This proposed reduction is a step in the right direction, which it was supposed would long ago have been taken, but which one kind of influence or another has up to the present prevented. There are a number of reasons to be urged in behalf of the change proposed. For one thing justice demands it, for at present those who pay letter postage pay much more than their share of the expense of running the Post Office Department, while under existing conditions other users of the mails pay much less than their share. In the next place, the reduced charge will not, judging by the experience of the past, result in a corresponding loss of revenue, for when a reduction of 33⅓ per cent. in the rate was made in 1884 the revenues showed a falling off of only 4 per cent., while six years later they had grown to an amount a third greater than during the last year under the higher rate. It should not be forgotton, further, that the measure under discussion does not actually reduce the rate of letter postage, which, under its provisions, will remain at two cents per ounce, but only allows a pro rata charge of the present rate for half-ounce letters.

But there is a higher and wider point of view from which the change proposed may be regarded and an even more radical reduction justified. There is no branch of the government whose activity touches the public at so many points and "comes home to men's business and bosoms" to such an extent as the Post Office Department, and its main object should be to furnish as widely extended, as expeditious and as efficient a service as possible. It is scarcely necessary at this day to lay special stress upon the valuable influence which cannot fail to be exerted in the commerce, the industry, the social habits and the general civilization of the people by any reasonable extension of the postal system, which, as Dr. William Ellery Channing once said with truth and point, "binds the whole country in a chain of sympathies and makes it, in truth, one great neighborhood." If Congress could be got to regard the extension of postal facilities from this point of view, the way to a reduction of the rate on letters, even beyond that contemplated by the measure under discussion, would not be found to present any obstacles of insuperable difficulty.

Beyond question the most radical change in the excise legislation of New York state that has been proposed with any show of adoption within the memory of men now in active life is that embodied in the Raines bill, which has lately passed both houses of the New York legislature, and is now awaiting action by the governor. The measure provides for the abolition of all local boards of excise, substituting therefor a state commissioner, with local deputies and special agents. The license fees are very largely increased, ranging from $800 in New York city to $200 in villages of between 1,200 and 5,000 inhabitants, and $100 in smaller places. License certificates are to be issued by the state commissioner, and of the taxes or fees collected one-third, exclusive of the cost of collection, is to go to the state treasury and two-thirds to the municipality in which they are collected. A local-option system is provided by the bill, which provides that the question of the granting of any license is to be submitted to a vote in the towns at the next election. The measure has naturally aroused a considerable amount of criticism while under consideration in the legislature, mainly, of course, from the interests specially affected.

Little has been heard for some time past of the proposition to repeal the compulsory pilotage laws, but the proposition has come to the front again as the result of a report of the House Committee on Merchant Marine and Fisheries, submitted this week. This report recommends the enactment of a bill providing that no state or municipal government shall impose upon pilots of vessels any obligation to procure a state or other license in addition to that issued by the United States, or any other regulation which will impede such pilots in the performance of the duties required by the law; that no pilot charges shall be levied by any such authority upon any vessel piloted as provided by the law, or upon any vessel of the United States employed in the coastwise trade, being towed into or out of any port of the United States by a steam vessel under command of a pilot licensed for such port under the laws of the United States, and that in no case shall the fees charged for the pilotage of any vessel exceed the customary or legally established rates in the state where the same is performed. Nothing in the bill, however, is to be construed as annulling or affecting any regulation established by the laws of any state requiring vessels entering or leaving a port in any such state, other than coastwise vessels, to take a pilot duly licensed or authorized by the laws of such state.

A sub-committee of the House Commerce Committee, which has been engaged upon a bill relative to the Nicaragua Canal, has agreed upon a measure providing for a reorganization of the Maritime Canal Company, under which the company is permitted to issue bonds to the amount of $100,000,000, of which $7,000,000 are to be held by the company to reimburse it for the moneys actually expended in Nicaragua for their franchise. The bonds are to pay interest at 3 per cent., are to be guaranteed by the United States, and are to be redeemed at the pleasure of the government. In return for its guarantee of the bonds the government is to receive stock of the company to an amount equal to the bonds issued. To the Nicaraguan government $4,000,000 of stock is to be issued, and to the government of Costa Rica $1,500,000 worth. Provision is made for a board of fifteen directors, of whom ten are to be named by the United States, three by the company, and one each by Nicaragua and Costa Rica. The canal is to be built by three engineers of the United States Army.

Arrangements to continue the free distribution of seeds under the recent legislation of Congress are being considered by the Secretary of Agriculture, who has referred the recently adopted legislation to the Attorney-General and the Comptroller of the Treasury for their opinion. The latter official has informed the Secretary that the appropriation in the regular agricultural appropriation bill for the purchase of seeds is available for the purchase and distribution of seeds under the joint resolution. A circular has been prepared by the Secretary to be sent to seedsmen throughout the country inviting them to submit bids for furnishing the department with seeds already put up in packages ready for shipment. This requirement is intended to obviate the employment of a large number of people who were formerly engaged in putting up the seeds in packages. About two-thirds of the seeds purchased will be distributed among the congressmen, who, it is estimated, will get about 5,000 packages of seed each under the plan of distribution contemplated. The seeds will be subject to tests, conducted by experts at the department.

A resolution was adopted in the House of Commons this week declaring that the instability of the relative value of gold and silver since the action of the Latin Union in 1893 has proved injurious to the best interests of the country, and urging the government to do everything possible to secure, by international agreement, a stable monetary par of exchange between gold and silver. The Chancellor of the Exchequer reminded the House of the passage of a resolution at the last session urging the government to coöperate with the other powers in a conference aiming to remove the evils arising from the fluctuations in gold and silver. The present government, he said, did not wish to recede from that resolution, and it was willing to enter into negotiations with the powers for a conference, but on the understanding that it was not prepared to abandon the gold standard in the United Kingdom. The Chancellor referred to the fact that some of his colleagues were pronounced bimetallists, but that they all agreed in thinking that they would not be justified in departing from the gold standard in the United Kingdom. There was no doubt, the Chancellor said, that if the powers could agree regarding the use of silver, the Indian government would reconsider the question of reopening its mints. All the leading English monetary experts held that the wealth of the country had been built up on a gold standard, and that its permanence and prosperity were dependent upon the existing system. In view of that opinion no responsible government would propose to change the present conditions.

THE NORTHERN PACIFIC PLAN.

Within the past few years new theories have found favor in connection with the reorganization of bankrupt properties. The idea that the creditors (i. e., the bondholders) of a corporation in this situation should be forced to contribute to the cash required to restore the concern to solvency has been abandoned, and the burden has of late been uniformly placed, where it properly belongs, on the stock. The first abortive plan for the reorganization of the Richmond Terminal property was the last important example of the old style of reorganization, while since that time all the successful operations of this nature—the Atchison, New England and Erie plans being striking examples—have proceeded upon the lines just indicated. The same principles have now been applied to the reorganization of the Northern Pacific Railroad, one of the most difficult as well as important transactions of the kind which has yet claimed the skill and attention of American financiers.

The Northern Pacific plan marks the end of the conflict between different financial interests in the company, and in which the United States courts themselves have taken an unseemly part. Inasmuch as the assent of all the interests whose cöoperation is necessary for the success of the plan was obtained in advance of its issue, the chance of successful opposition is removed. If the latter appeared it would doubtless come from the holders of the preferred and common stock, and, indeed, it is from that quarter that all complaints as to the severity of the plan proceed. The chief representatives of the stockholders, however, have signified their approval and acceptance of the provisions, and, apart from some symptoms of dissent from a minority of the third mortgage bondholders, there is no nucleus for opposition. In addition to this, the plan is brought out by the leading American financial house, with the cöoperation of the powerful Deutsche Bank of Berlin, and is issued in the name, not only of the bondholders' committee, of which Mr. E. D. Adams is the chairman, but of the stockholders' protective committee, of which Mr. Brayton Ives is the head. A syndicate of American and European banking firms has been formed with a capital of $45,000,000 to provide the amount of cash necessary to insure the carrying out of the plan and to furnish the new company with working capital, and with a sum of about $5,000,000 for immediate requirements in the way of betterments. Under such circumstances the committees are justified in declaring that the plan is at once operative. There is no doubt of the success of the entire arrangement, and the prompt decline in the market price for the old common and preferred stocks, with the corresponding strength of the bonds, especially of the consolidated mortgage 5 per cent. bonds, would indicate clearly that Wall street entertains no misgivings on this head.

The plan proceeds upon the true principle of doing away with all the subsidiary organizations and unifying the entire fixed obligations of the company, while it reduces the obligatory charges to an amount well within the proven earning power of the property, and provides, by the assessment, for a sum in cash sufficient to discharge all its floating indebtedness, and to furnish it, as already indicated, with an adequate fund for working capital and betterments. According to the plan the fixed charges will henceforth be about $6,052,000 per annum. For the past five years the average net earnings of the Northern Pacific system have been $7,800,000 per annum, leaving a balance of nearly $1,750,000 a year applicable to the payment of dividends on the new preferred stock, or at the rate of 2½ per cent. on the same. It should also be noted that while the plan aims at a conversion of all the prior liens into the new securities, such a process is not to be enforced, but is expected to follow a gradual course, as the interests of the bondholders themselves would dictate.

The new securities of the reorganized Northern Pacific will consist of

Prior lien 4 per cent. bonds	$130,000,000	
Less reserved for various purposes	33,423,000	
		$96,577,000
General lien 3 per cent. bonds	$60,000,000	
Less reserved	4,000,000	
		56,000,000
Preferred stock, 4 per cent. non-cumulative		75,000,000
Common stock		80,000,000
(Approximate) Total		$307,577,000

The assessment upon the present preferred stock is fixed at $10 per share and on the common at $15 per share, the holders receiving no return in new securities for such payments. The basis of exchange of existing bonds and stock for the new securities is exhibited in the following tabulated form:

	Receive Per Cent. in:				
	Cash.	*New Prior Lien Mortgage Bonds.*	*New General Lien Mortgage Bonds.*	*Preferred Stock Trust Certificates.*	*Common Stock Trust Certificates.*
General First Mortgage Bonds	*3	135			
General Second Mortgage Bonds	†4	118½		50	
General Third Mortgage Bonds	†3		118½	50	
Dividend Certificates	‡3		118	50	
Consolidated Mortgage Bonds	†11½		66½	62½	
Collateral Trust Notes	‡7	100		20	
Northwest Equipment Stock	§ 100				
Depositors of Preferred Stock—for payment of a sum equal to $10 per share				50	50
Depositors of Common Stock—for payment of a sum equal to $15 per share					100

* Payable April 1, 1896. This represents the coupon due July 1, 1896.
† Payable 60 days after the plan shall have been declared operative.
‡ Payable 3 per cent. on May 1, 1896; 4 per cent. on January 1, 1897.
§ Payable at any time, in the discretion of the managers, on or before completion of reorganization, with interest at 6 per cent per annum from June 1, 1896.

One circumstance connected with the matter is worthy of attention—that is, the omission of any formal arrangement with the Great Northern. It will be remembered that the negotiations between the Northern Pacific reorganization committee and Mr. J. J. Hill, the president of the Great Northern, carried on last summer, resulted in an agreement by which the latter company was to guarantee the bonds of the Northern Pacific and to obtain a practical control of the property. Legal and other obstacles prevented the carrying out of this arrangement, but it was supposed that the plan to be adopted would in some manner provide for the coöperation of the Great Northern. Interests connected with the latter are, indeed, understood to have secured considerable holdings of Northern Pacific securities, particularly the 5 per cent. consolidated mortgage bonds. The fact that this interest was consulted and acquiesced in the issue of the present plan is, therefore, significant. It is stated, indeed, that on full consideration the advantages of an independent reorganization of the property without any entangling alliance with its competitors seemed to outweigh any possible benefit which direct financial assistance from the Great Northern would have involved.

A FIRMER MONEY MARKET.

The feature of the financial situation has been the increasing firmness of rates for money throughout the country and the narrowing conditions which have appeared in connection with loans. The latter is perhaps the most serious symptom. It would indicate that bankers are apprehensive in regard to the conditions which exist in certain lines of trade, and are inclined to restrict accommodations accordingly. The open market for commercial paper, of course, takes its tone from the banks, and the result has been to create pressure in lines of trade where the unsatisfactory results of winter business and the prevalent low prices had already produced more or less contraction and loss. The recent failures in various quarters seem to have emphasized these conditions, and the stock market has even displayed a disposition to make them the reason for a decline in speculative values.

At the same time the conditions of the money market with reference to the supply of cash and the operations of the Treasury have been the object of considerable attention. The payments for the recent issue of 4 per cent. bonds have taken approximately $100,000,000 out of the market, while about $10,000,000 more still remains to be paid into the Treasury on account of bond subscriptions. Moreover, no concealment is made of the fact that one of the objects in leaving about $20,000,000 of the amount received in payment for the bonds on deposit with specially designated banks was with a view to exercising a control over the money market, and putting a check upon gold exports, if danger of such a movement should develop. At the time the arrangement was first made it was supposed that the only purpose to be served was to render the payments for the bonds less disturbing to the money market. It now seems, however, that the considerations just mentioned had their share in determining the Treasury's policy in this connection. Whether it will be effectual in avoiding gold exports by keeping up rates for money can only be fully determined by future developments. For the present, however, the effect of a firmer money market is seen in connection with the absence of any large inquiry for foreign exchange, and the maintenance of the rate for sight drafts on London at 4.88 or lower, figures which make gold exports impossible. Under these circumstances the Treasury gold reserve has been gradually creeping up, the official figures standing at $128,000,000 or more, while it must be remembered that a considerable part of the special deposit of the proceeds of the new bonds remaining in the banks has not been for some reason included in the daily Treasury balance.

The call issued this week by the Treasury on the special depositary banks for 20 per cent. of the $20,000,000 or so composing this fund has apparently had an influence out of proportion to the amount thereof. Coming, however, at a moment when preparations were on foot for the annual disbursments and settlements throughout the country districts, coupled with the uneasy feeling above referred to in respect to commercial credit, the response of the New York and other money markets has been a decided hardening of rates, which, however, has thus far not been attended by any positive disturbance.

THE ECONOMIC ASPECT OF THE TRANSVAAL REBELLION.

Johannesburg, February 10.—The immediate economic losses by the recent abortive rebellion in the Transvaal are more serious than would be imagined at first sight; the more remote losses are also heavy, though it is less easy to put them into figures. A careful calculation shows that the average stoppage of the various mines on the Witwatersrand on account of the rising which took place at the new year was just two weeks, and as the average production of gold has lately been 200,000 ounces per month, this works out roughly at a loss of 100,000 ounces in the amount of gold produced. This loss fell in unequal proportions on the months of December, 1895, and January, 1896, the respective proportions being roughly 25 and 75 per cent. This means an immediate decrease in production of $1,750,000, and, as will be hereafter shown, this represents almost entirely loss of profits, and, consequently, loss of dividends to shareholders. Similar losses for the next few months through the displacement of Kaffir labor and other causes, all directly attributable to the rebellion, will amount on a most moderate calculation to another 50,000 ounces, or, say, $875,000. The amount is well within the mark, because but for the political troubles the monthly output of the Witwatersrand fields would have been well over 200,000 ounces by this time, and the increase would have been in a greater ratio than it is now likely to be when that point is regained. A considerable proportion of Kaffir laborers, probably 10 per cent. of the whole employed, have left the fields directly on account of the war scare, and for the same reason, and also owing to the presence of large numbers of armed Boers on every road leading to Johannesburg, the number of incoming natives of late has been small. It is extremely probable, therefore, that unless there is some change in the directions indicated, and native labor is induced to seek employment at the mines more freely, the loss in gold produced for this and the following two months will be considerably more than 50,000 ounces. Moreover, but for the war scare the result of the failure of the crops throughout South Africa would probably have made itself felt by this time in a greatly increased supply of black labor, and though a great influx of Kaffirs is certain to take place on this account, it is as certainly being kept back by the presence of camps and armed Boers around Johannesburg. A total loss of 150,000 ounces in the amount of gold produced is thus, it will be seen, an exceedingly moderate estimate. It means a sum of $2,625,000.

Now, as to the assertion that this loss will almost wholly come out of the pockets of shareholders in reduced dividends, it is only necessary to examine the working statements of the leading companies for the past two months. Take the New Primrose, for example. The loss in production for December by a stoppage of eight days was estimated at 2,400 ounces, value $43,000, and as working expenses were generally running on as usual, the month's profit was only $33,370. For numerous recent

months the profits stood steadily at about $85,000, so that the loss for December on the average profit was actually more than the value of the falling off in gold produced. This may be an extreme case, but it will almost certainly be found that the loss in profits to the producing mines will not be less than $2,000,000, a sum equal to nearly 20 per cent. of the total distributed in dividends last year by the dividend-paying mines, some thirty in number. It is not so easy to reckon the losses to the non-producing mines. Directly, their operations have been retarded to the extent of one fortnight, but this is probably a small matter compared with the indirect loss through the displacement and demoralization of Kaffir labor. It is not possible to calculate the losses sustained through depreciation of share values and mining properties, for the simple reason that no one can apportion the extent to which the rebellion, then in prospect, was responsible for the severe slump which took place in all descriptions of South African securities during the last three months of 1895. It is now recognized, however, that the severe and continuous fall in prices which went on practically from the beginning of October to New Year's Day is largely to be attributed to the fact that the outbreak was then impending, and the fact must necessarily have been known to a certain number of persons.

The economic loss through the diversion of the stream of immigration from the Transvaal must necessarily be very great. For some months before the rising immigrants were pouring into the Transvaal from England, America and Australia at a steady rate of fully one thousand per week—a marvelous rate for a country with a white population of not more than 200,000 souls. Since the new year the arrivals have been on a much lower scale, while numbers of workmen are leaving the country, employment being much scarcer as a result of the business stagnation which followed the outbreak. The building trade, in which there was a genuine boom up to the close of the year, has suffered badly. Bricklayers are now glad to take $30 a week, instead of $32.50 before the rebellion; carpenters get $27.50, instead of $30, and the wages of other classes of artisans have been similarly broken. Moreover, there are several hundreds of unemployed workmen in Johannesburg, though it is fair to add that things seem already on the mend, and building and other operations are brisker than they were during January. At the mines wages have not been broken, and the white men, as a rule, were retained on full pay during the suspension of operations; but the lesser number of Kaffirs necessarily involves a decrease in the number of whites required, and in that way employment is scarcer than it was. It was in the towns that the pinch of the hard times consequent upon the war scare were felt. Flour rose to $30 a sack, sugar to 25 cents per pound, and the other necessaries of life in proportion. To meet the distress consequent upon the high prices and the absence of employment, the Reform Committee opened relief depots, and the members subscribed some $400,000 practically in a single day. The government also opened a relief store, at which the Dutch and native populations had rations, etc., served out to them. The immediate outlay to which the government was put in dealing with the situation must have been at least $500,000, this including disbursements from the secret service fund, purchase of war material, etc., while a heavy loss, difficult to calculate, has been sustained by individual Boers, 10,000 of whom were taken from their farms in the very middle of summer. A force of 2,000 or 3,000 Boers are still under arms, representing a heavy drain on the agricultural resources of the government. But the chief loss to the Transvaal government must be the falling off in revenue which is already resulting as a consequence of the insurrection, and the feeling of insecurity which has for the time taken possession of the whole community and of the investing classes of Europe. It is for the Transvaal government itself to end this state of insecurity by granting reasonable reforms, and possibly the shrinkage in revenue already beginning to tell on the exchequer will be the most convincing argument with the Boer authorities. The Boer farmers will also be made to feel keenly the badness of the times by the lessened purchasing power of Johannesburg. Last year, on account of the mining boom, Johannesburg was the finest market in the world for all kinds of produce. The Orange Free State alone marketed produce in Johannesburg to the value of $5,000,000, at highly remunerative prices. But already a marked change is apparent, and although prices keep high on account of the drouth, the demand is relatively poor. As a result of the scarcity, shipments of Indian corn from New York are being marketed in different parts of South Africa at prices affording a fair margin of profit to both the farmer and the shipper.

The mercantile community will be very severe sufferers by the crisis. The spending power of the mining companies and of individuals has been greatly reduced, and this is making an appreciable difference in the turnover in all businesses. Vendors of mining and building materials of all descriptions report a serious setback in sales since the opening of the year, and this is the more unfortunate in view of the fact that large stocks were generally ordered some months ago on the prospect of the mining industry continuing to boom. If only the political troubles were settled a decided revival would at once take place, for the fields offer every inducement for a further development on a greatly increased scale, and capital in abundance can be had in good times. Meantime, however, there is a pause, and everyone is inclined to wait the evolution of events. Large quantities of mining materials, timber, etc., are imported from America, and the present stagnation of business on the fields must, conquently, to some extent be felt there. But the connection with America lies chiefly in the fact that most of the leading mine managers and experts on the fields are Americans, some of whom are prominent members of the Reform Committee, now on trial at Pretoria. C.

STATISTICS OF FOREIGN TRADE.

Preliminary statistics of foreign trade for the month of February and for the eight months ending therewith have just been issued by the Bureau of Statistics of the Treasury Department. These figures, which are corrected to March 14, show a total value of exports of merchandise for the month of February amounting to $77,710,938. This total represents an increase of over $21,700,000 as compared with the corresponding month of last year. The imports for the month were valued at $62,487,298, an amount which represents an increase of over $4,100,000 as compared with the corresponding month of last year. The free-of-duty imports were valued at $28,524,036, which represents an increase of over $700,000 as compared with February last year. The dutiable imports, on the other hand, amounted to $33,963,262 in value, which represents an increase of over $3,400,000 as compared with February, 1895. The imports showed an excess of $2,333,247 over the exports in February, 1895, but the balance was on the other side last month, the excess of exports amounting to $15,223,640.

For the eight months ending with February last the exports of merchandise were valued at $602,614,981, which represents an increase of over $44,700,000 as compared with the corresponding period of the preceding fiscal year. The imports were valued at $541,212,774, which represents an increase of nearly $74,000,000 as compared with the corresponding eight months of 1894–95. The duty-free imports were valued at $260,237,648, an increase of over $25,100,000 as compared with the corresponding period of the preceding fiscal year. The dutiable imports, on the other hand, were valued at $280,975,126, which represents an increase of over $49,800,000 as compared with the corresponding period of the preceding fiscal year. For both the periods compared the exports showed an excess in value over the imports, which excess amounted to $61,402,207 in the eight months ending in February, 1896, and to $91,652,052 in the eight months ending in February, 1895.

The exports of gold coin and bullion for the month of February last amounted to $2,183,700 and the imports to $11,559,089, as compared with exports of $1,565,194 and imports of $5,632,197 in February, 1895. The imports for both months were in excess of the exports, the excess amounting to $9,375,389 last month and $4,067,003 in February, 1895. For the eight months' period ending with last month the exports were valued at $82,123,811, an increase of over $23,700,000 as compared with the corresponding period of the preceding fiscal year. The imports for the last eight months were valued at $28,480,819, which represents an increase of over $12,400,000 as compared with the corresponding period of the preceding fiscal year. For both periods the exports showed an excess over the imports, the excess amounting to $53,642,992 in the eight months ending with February last, and to $42,369,443 for the corresponding eight months of the preceding fiscal year. The silver movement was, as usual, of smaller volume, the exports of silver coin and bullion being valued at $40,201,344 for the eight months ending with February, an increase of over $10,000,000 as compared with the corresponding period of the preceding fiscal year. The imports were valued at $9,443,140, an increase of over $3,100,000 as compared with the corresponding eight months' period of 1894–95. For both periods the exports showed an excess over the imports—an excess which amounted to $30,758,204 in eight months of 1895–96, as compared with $23,859,832 in the corresponding eight months of 1894–95.

Detailed foreign trade figures for January are, in the main, quite encouraging, pointing to an enlargement in our export business during that month, simultaneously with increased railroad earnings and bank clearings. It is true that the volume of business was smaller in January than in December, and the increase in the export trade over a year ago was much below the proportion of increase shown in December, but the gain in the import trade was but little larger than the increase noted in December.

The following table illustrates the movement during January and the seven months ending January 31, with the percentages of gain or loss shown from January and the seven months' period of the preceding year:

JANUARY.

	1896.	1895.	*Changes, per cent.*
Imports—Duty free	$32,900,589	$30,096,545	Inc. 9.3
Dutiable	35,751,810	37,451,355	Dec. 4.5
Total	68,652,399	67,547,900	Inc. 1.6
Exports—Domestic	85,543,504	80,330,490	Inc. 6.4
Foreign	1,365,598	899,474	Inc. 51.8
Total	86,909,102	81,229,964	Inc. 7.0
Total trade	$155,561,501	$148,777,864	Inc. 4.5

SEVEN MONTHS ENDING JANUARY 31.

	1896.	1895.	*Changes, per cent.*
Imports—Duty free	$231,713,612	$207,327,232	Inc. 11.7
Dutiable	247,011,864	200,590,403	Inc. 23.1
Total	478,725,476	407,917,635	Inc. 17.3
Exports—Dutiable	513,963,105	494,340,575	Inc. 3.8
Foreign	11,000,638	7,562,359	Inc. 45.5
Total	524,963,743	501,902,934	Inc. 4.5
Total trade	$1,003,629,519	909,820,569	Inc. 10.3

The only decrease shown, it will be noted, is in the item of dutiable imports for the month of January, which fell off 4.5 per cent. Duty-free imports, on the other hand, increased 9.3 per cent., leaving the net gain in all imports 1.6 per cent. The causes of the falling off in imports are to be found in the decreased imports of manufactured goods, particularly cotton, linen, silk and woolen goods; coffee, fruits, rubber and tinplates. With the exception of coffee, it will be noted, most of the above enumerated imports are dutiable. Among the increases in imports during January are to be found chemicals, raw cotton (mostly from Egypt), hides and skins, raw silk, and wool, sugar and tobacco, the increases in the last two being due, curiously enough, to much heavier shipments from Cuba this year than last. In the export branch of trade, it will be seen by the table above given, domestic exports during January increased 6.4 per cent., owing to enlarged shipments of breadstuffs, provisions, refined petroleum and a number of manufactured articles, the product of the copper, iron and steel, leather and cotton industries. Almost the only unfavorable feature in the export trade in January was the heavy decrease in raw cotton exports. It will be gathered from the above that the large business in manufactured articles heretofore noted is still a feature of our export trade, while the increased movement of products of agriculture, such as corn, wheat and provisions, has wiped out the unfavorable balance of trade in all exports.

THE TEXAS PACIFIC REPORT.

During the year 1895 the railroads of the southwest were somewhat unfortunate in regard to traffic conditions. The heavy decrease in the Texas cotton crop was a serious matter for them, and the slow movement of the corn crop to market has also had its effect upon their earnings. In consequence of these facts, the railroads of the section in question displayed a falling off in traffic and revenues during the latter part of the year, in the face of the general improvement which was shown by the railroads in other portions of the country.

The annual report of the Texas & Pacific Railway Company for the year, which has just appeared, is the first direct evidence of the character and effect of the conditions to which reference has been made. The road is largely dependent upon the cotton traffic of Louisiana and Texas for its earnings, and

the report states that the decrease in the company's earnings is due almost entirely to the poor crop of the staple in those states. The number of bales of cotton hauled for the year was 455,649, while in 1894 the road transported 672,335 bales. Earnings from cotton in 1895 were only $1,071,489, as compared with $1,414,198 in 1894, a falling off of $342,709. At the same time the large corn crop in Texas and the increased movement of cattle were of material assistance, and doubtless prevented the showing from being much worse than it is.

The company's earnings for the year under consideration and their disposition compare as follows with those of the two preceding years:

Year.	1895.	1894.	1893.
Gross earnings	$7,015,308	$7,353,013	$7,334,294
Operating expenses	5,188,437	5,290,374	5,217,922
Net earnings	$1,826,871	$2,062,639	$2,116,371
Other income	86,323	71,953	117,768
Total income	$1,913,194	$2,134,592	$2,234,139
Fixed charges	1,575,590	1,588,216	1,574,244
Surplus	$337,604	$546,376	$659,895

By this it will be seen that, as compared with 1894, the gross earnings decreased $337,704, while operating cost was reduced $101,936, resulting in a decrease of $235,767 in net earnings. The ratio of operating expenses to gross earnings for the year was 73.96 per cent., an increase of 2 per cent. The rates obtained were unsatisfactory, those on freight reaching the lowest average on record, being 1.11c. per ton per mile, against 5.13c. per ton per mile in 1875. Owing to this fact, while freight tonnage—1,928,000 tons in all—increased 182,000 tons, the revenues derived from freight show a total decrease of $279,864. At the same time this falling off may be in a large measure due to the decrease of the more profitable cotton tonnage, while the increase in the total business hauled was principally composed of classes of freight on which the charges are necessarily low.

The policy of the company has been, as in late years, to devote considerable sums to improvements, and this policy has been amply justified in the short-crop year. No less than $182,000 of the surplus earnings were devoted to the purchase of new cars, and 11,778 tons of steel rails were purchased, sufficient for 100 miles of track. It is stated that some 9,000 tons of rails are still needed to complete the relaying of track with steel, and this it is proposed to do during the current year. Attention is called in the report to the increase of population along the line and to the marked increase of local travel and tonnage. The remarkable development of New Orleans as a port for the export of grain has not been without an effect upon the fortunes of the Texas Pacific, and the company has begun the shipment of cattle direct from Texas to Liverpool via New Orleans. It should also be noted that the report is very full in details in regard to operations and earnings, and apparently furnishes a frank exhibition of the condition and prospects of the corporation.

THE TARIFF IN CONGRESS.

The tariff question has been once more brought to the fore in Washington. The sub-committee of the Committee of Ways and Means of the House, which has had under consideration a number of bills relating to reciprocity and commercial treaties, has devoted the week to public hearings, intended to elicit practical information concerning the operations of the reciprocity treaties that were negotiated by the last administration and the effect of their repeal; also concerning the obstacles in the tariff or customs regulations of foreign countries tending to retard the extension of our export trade. In addition to arranging for these public hearings, the sub-committee has also mailed about five thousand circulars of inquiry to merchants and manufacturers actually engaged in the export trade asking a series of questions designed to elicit information that will be valuable in considering future legislation. These questions relate to individual efforts that have been made to reach foreign markets; the discriminations or obstacles in the laws or customs regulations of foreign countries that have been met with, and the means by which they may be removed; what changes have recently occurred in the tariffs of foreign countries, and how far modification of existing legislation would aid in the extension of American exports.

Furthermore, the committee has asked for information concerning the present output of the manufacturers of the United States compared with that of six years ago, and what changes have occurred in the cost of production, including wages, the cost of raw material, transportation rates, etc.; also what proportion of the total present and possible output of the manufacturers of the United States can be absorbed by the domestic market, and the natural surplus that would remain for export if all the manufactories were running to their full capacity. The question is asked, also, whether the general effect of the reciprocity arrangements made in 1890 was favorable or unfavorable to the export trade of the United States, particularly so far as they concerned the farm products, and whether the manufacturers and export merchants of the United States favor the application of the reciprocity principle to future tariff legislation and the enactment of a general law authorizing the President to negotiate reciprocity treaties with both European and American nations so far as possible. Answers to these questions have also been asked for from commercial and industrial organizations throughout the country. It is intended to make the substance of the information collected the basis of a report for the use of Congress in relation to proposed legislation upon the general subject.

Whether during the present Congress legislation dealing with the tariff question will pass both houses remains to be seen. The impression seems to gain ground that no more legislation than appears to be absolutely necessary will secure the approval of the national legislature. Of the enactment of such legislation there is less likelihood, owing to the probability that the President will veto any suggested measures which have a distinctly protective leaning. About special and limited changes in the law on detailed points there is more room for conjecture, as, for example, in the case of the bill to repeal section 61 of the tariff law of 1894. This bill provides that any manufacturer finding it necessary to use alcohol in the arts, or in any medicinal or other like compound, may use the same under regulations to be prescribed by the Secretary of the Treasury, and on satisfying the collector of internal revenue for the district wherein he resides or carries on business that he has complied with such regulations, and has used such alcohol therein, and exhibiting and delivering up the stamps which show that a tax has been paid thereon, shall be entitled to receive from the Treasury of the United States a rebate or repayment of the tax so paid. This bill has been reported favorably by the sub-committee of the Committee of Ways and Means.

THE ELECTRICAL DEAL.

An arrangement between the General Electrical Company and the Westinghouse Electric & Manufacturing Company has always been regarded as a desirable termination of the competition which has existed between the two concerns, which virtually monopolize the supplying of the country's electric machinery. The latter is one of the most growing fields of business activity in the United States at present. Yet, although the two organizations in question own the bulk of the patents which apply to electric development for lighting, power or transportation, they have not attained the prosperity which these advantages might be presumed to insure them. Only a few years ago the Westinghouse Company was virtually reorganized, while in 1893 the General Electric was saved from absolute bankruptcy only by the sacrifice of its treasury assets.

Apart from the competition in securing new contracts which has subsisted between them, the companies suffer in other ways from this rivalry. Each controls exclusive patents of the utmost importance in electric machinery and construction. The General Electric, as the successor of the old Edison Company and the Thomson-Houston Electric Company, owns some of the basic patents on which the whole business is founded. The Westinghouse, besides a great variety of rights to inventions of this kind, has obtained a great advantage in the transmission of power through the labors of the eminent electrician, Mr. Tesla, in its service. On the other hand, a decided legal victory has lately been obtained by the General Electric in the shape of decisions affirming the validity of the patents which cover material features of the ordinary electric motor or trolley mechanism of which it is the owner.

It is, indeed, thought that the outcome of this latter litigation has been very effective in bringing about a settlement. Rumors of a consolidation of the two companies are old matter. It would seem, however, that such an arrangement is not desired by the controlling interests in either concern. The advantage, however, of a working arrangement by which both corporations would obtain mutual use of all patents is obvious, and negotiations with that object in view were undertaken a year ago. Owing, it is reported, to personal and trade rivalry, no less than to radical differences of the estimates which each put upon the value of its special patent rights or of the capacity and facilities of its plant, these attempts came to naught. The refusal, it is said, rested with the Westinghouse Company, and it is significant that the conclusion of a harmonious alliance was quick to follow the decisions above referred to. Pointing, as the latter did, to the practical monopolizing of street railroad construction by the General Electric, to say nothing of the possibility of a vast number of suits for infringement of its patents in work already completed by its rival, the alliance just ratified is a natural and in its effects a beneficial thing for the progress of electrical development in the United States.

The compact just negotiated, and ratified by both companies at the close of last week, takes the form of a pooling of their respective patent rights and the free use of the same by both under royalty. Certain patents are reserved, but it is understood that those pooled include all that the two companies hold for lighting and power, except those pertaining to underground trolley construction and mechanism. The patents are to be managed by a board of control consisting of five members, each company appointing two, and the four so appointed to select the fifth member of the board. Under the terms of the arrangement the General Electric is to be considered as contributing 62½ per cent. and the Westinghouse 37½ per cent. in value of the combined patents, and each company is to have free use of the patents of the other (except the excluded ones) on the payment of royalties for the same in excess of the agreed value of its contribution to the patents.

The economy of this plan is obvious and is expected to have a marked effect upon the future business and operations of both concerns. It has been suggested that some working arrangement as to competition for contracts is included in the pacification. This, however, does not appear to be the case, though doubtless there will be much less unnecessary lowering of prices in order to obtain work, and good authorities on the subject have been quoted to the effect that an average of 25 per cent. higher prices for electrical machinery is likely to prevail as a consequence of the deal.

OUR POLICY AS TO FORESTRY.

A short time ago Secretary Smith, of the Interior Department, addressed to the president of the National Academy of Sciences a request for the appointment of a commission to investigate and report upon the forestry question. This suggestion was made by the Secretary, whose department is charged with the administration of the public domain, for the reason that he had become convinced of the necessity of a radical change in the existing system of disposing of and preserving the forests, and the request was made under the provisions of the act of Congress incorporating the National Academy. The question raised is an old one. The Secretary recalled the fact in his letter to the president of the academy that his predecessors in office for the last twenty years have vainly called attention to the inadequacy and confusion of existing laws relating to the public timber lands and the consequent absence of an intelligent policy in their administration, resulting in such conditions as may, if not speedily stopped, prevent a proper development of a large portion of the country; and because the evil grows more and more as the years go by, he declared that he felt impelled to emphasize the importance of the question by calling for the opinion and advice of that body of scientists which is officially empowered to act in such cases.

The Secretary asked the academy for an official expression of opinion upon the questions whether it is desirable and practicable to preserve from fire and to maintain permanently as forested lands those portions of the public domain now bearing wood growth for the supply of timber; how far the influence of forest upon climatic, soil and water conditions makes desirable a policy of forest conservation in regions where the public domain is principally situated, and what specific legislation should be enacted to remedy the evils now confessedly existing. In his reply accepting the commission, the president of the academy declared that no other economic prob-

lem confronting the government of the United States equals in importance that offered by the present condition and future fate of the forests of western North America, and quoted well-known statistics as to the extent of the forests in the public domain. At the same time he suggested that while the members of the academy serve the government without compensation, it is proper that provision should be made for refunding their traveling and other absolutely necessary expenses, and for such field and other work as may be necessary to enable the commission to prepare its report intelligently, and he suggested that a sum of money, not exceeding $25,000, be placed at the disposal of the commission for the purpose of this investigation. The President has named as members of a commission to report upon a national forestry policy Professor Charles S. Sargent, the director of the Arnold Arboretum, and a well-known forestry expert; Alexander Agassiz, General Henry L. Abbott, an engineer and hydrographer, who has a special familiarity with conditions in the west; Professor William H. Brewer of Yale University, a botanist who has served on the geological surveys in California, and Mr. Gifford Pinchot, who is classed as an arboriculturist of merit. The report of this commission should certainly attract attention, for it is not too much to expect of the members that, in view of the experience of many years in the United States and of what is known of the experience of other countries, their investigation should exhaust the subject in so far as it is compassable to-day, and should supply the basis for a policy which can be open to little or no criticism except upon matters of detail.

CONTINUED IMPROVEMENT OF BRITISH TRADE.

The somewhat unexpected but none the less pronounced improvement in total values of British exports and imports for January is continued in the returns for February, just made public.

There is a gain of British imports of no less than £7,342,247, or 26 per cent., and of exports of £3,710,361, or 23 per cent., which removes any necessity for attributing increases to the fact that leap year gave one additional day in February, or to comparison with a month when the handling of goods was interfered with by severe weather.

For two months the growth in the imports is nearly 14 per cent. and in the exports 19 per cent., and even these totals are large enough to remove all suspicion that an extra day and the weather were responsible for the expansion. While it "is a long time since the exports of any month bore such a satisfactory proportion to the imports," it is declared to be "far from pleasant to see our manufacturing industries languishing, and in these days of falling prices it is more important that the value of exported merchandise should be maintained and added to than that the value of the imports should be kept up at the figures of former years."

Toward the February increase of £7,342,247 in the imports one-third is contributed by foodstuffs, free of duty, and one-eighth by sugar. Wheat, flour and Indian corn each furnish increases of over £351,000, and wheat £135,743, although the quantity is smaller. Among exports increased values are reported for smaller quantities shipped in the case of cotton yarn, linen piece goods, mohair yarn and wool waste—a welcome circumstance considering that the interest of British trade returns for many months has centered in the textile department.

Returning to imports, the next largest gain is £1,155,902, of manufactured articles. It appears that British matron and maid insist on having gloves, straw bonnets, silk stuffs, and even woolen stuffs, from France, and receipts are almost entirely from that country. But the great increase in quantities of glass, manufactured iron and paper imported into the United Kingdom is "dispiriting to those who believe that this country ought to supply practically the whole of these articles required for home consumption." There are large importations also of tobacco and oils. Raw materials are entering the country freely, though exceptions are furnished by cotton, goats' wool, jute and paraffin. The shortcoming in raw cotton is entirely due to the moderate American shipments, and India and Egypt are taking the opportunity to send more. Wool stands well at the head of the raw textile materials, the increased receipts from Australasia alone being £800,000 for the month.

There were increases among February exports amounting to £3,710,361; of this textile fabrics showed £1,401,114, metals £777,999, and miscellaneous manufactured goods £654,327. Machinery, apparel and chemicals also show relatively large gains. There was a decrease of 790,800 pounds in the quantity of cotton yarn shipped, but a gain of £86,515 in money. Cotton piece goods rose £776,502, and other manufactures of the same staple $116,820. It is explained that the "change in the method of levying the Indian duties seems at once to have stimulated the shipments to that dependency, and China is buying cotton pieces more freely; but the American consumption is beginning to slacken." In woolen and worsted yarn the improvement is £87,050 on German and American purchases.

Colonial purchases of hardware are better, and India is taking a lot of railway iron. "Even the United States has become an important consumer of that type of goods; indeed, more railway iron has gone there this year than to any other destination save India and Argentina." There is "no feature more agreeable than the extent to which the improvement in our export trade is due to the colonies."

RAPID TRANSIT IN NEW YORK.

The outlook as regards rapid transit in New York city has again been brought into prominence, this time by a memorial from the commission to the legislature asking for some amendments to the existing law. The commissioners report that, acting under the authority of the law, they have adopted routes and a general plan of construction that have received the approval of all the public authorities concerned, and the favorable report of a special commission of the Supreme Court, in lieu of the consent of the abutting owners, and that they are now approaching the crucial test of the law under which they are acting, which calls upon the commission to construct the proposed railroad by contract with some person or corporation, who shall agree both to construct the road and to operate it for a term of not less than thirty-five years, nor more than fifty years, and to pay a rental thereon not less in amount than the interest upon the city bonds to be issued for construction, plus at least 1 per cent. per annum for the sinking fund, and further provides that the city is to have a first lien on the rolling stock and other property provided by the contracting party for the operation of the road.

It is clear, the commissioners say, that the problem presented to them by such requirements is one of exceeding difficulty, lest, by endeavoring to make a contract that will lead to the construction of the road, they expose the city to great risk of loss; or lest, by endeavoring to protect the city beyond a peradventure, they make it impossible to find a contractor. For, in a contract approximating in amount to $50,000,000, the contractor's usual profit might be so large as to permit the forfeiture of all ordinary bonds after the completion of construction without any attempt to operate the road, or even to provide the operating plants. Under a system of electrical operating, such as is proposed, the necessary power stations and equipment for the railroad, as designed, are estimated to cost in the neighborhood of $7,000,000.

Ordinarily, it is pointed out, a company proposing to build a railroad is incorporated with a comparatively small paid-up capital in order to keep its taxes at as low a point as possible, and then it borrows upon mortgage bonds the money needed for the construction of the operating plant. But the provision of the rapid transit law that the city is to have a first lien upon the equipment and operating plant makes it impossible for the contracting party under this law to finance in this fashion. After very careful and most anxious consideration, the commissioners have reached the conclusion that they cannot safely enter into contract under the provisions of the existing law for the construction of the proposed road, except with a corporation not now existing, which ought to be formed for the purpose, having a very large paid-up cash capital. Only such a company, they believe, could secure bonds that the commission would be justified in accepting, and also be able to provide the necessary power plant without borrowing money upon it, so that the city could have a first lien upon the plant, as the law requires.

In the view of the commission the first step in the successful solution of the business problem thus presented lies in securing a corporation competent to become a contractor under the terms of the existing law, and, with the view of making such a result the more sure, the commission asks for certain amendments to the law. In order that the financial burden to be placed upon such a company may not be too onerous in the early years of the enterprise, the commission ask that the requirement upon the contracting party to pay at least 1 per cent. into the sinking fund shall not necessarily begin immediately. The requirement to pay interest on the bonds issued by the city should, it is suggested, run as now; but it is proposed that the requirement as to payments into the sinking fund, at the discretion of the commission, shall not begin to run for five years after the operation of the road has been begun, and may then run for a second period of five years, at ½ per cent. instead of at 1 per cent., except that, after the net earnings of the system upon the investment of the contracting corporation reach 5 per cent., payments into the sinking fund shall be made annually of all excess until the present requirement of at least 1 per cent. per annum be reached.

With these modifications of the law, the commissioners think a contracting party may be secured who may be trusted both to build and operate the proposed railroad, for they are persuaded that the franchise is one of great ultimate value, commanding as it does the key of all underground travel in the city, while at the same time under the scheme of the law the city of New York will secure the ownership of the proposed railroad in the end, free from all liability. They submit that unless a responsible contractor can now be found the city will be met with one of these two alternatives, viz., either the city must construct the railroad as a municipal enterprise, or it must admit that this attempt, like all its predecessors to solve the city's rapid transit problem, has been a failure. The latter result, as is pointed out, is not to secure relief from the present situation, but to pronounce the problem almost insoluble.

A PLEA FOR RESTRICTED RAILROAD BUILDING.

Recognition of the fact that there can be too many railroad lines in a given territory is no new thing. In this country, particularly at the west, there has, however, been some hesitation in meeting the question by positive legislative enactment, but so far as measures have been taken to limit the duplication of lines, it has been through the enlargement of the powers of the various state railroad commissions. Massachusetts, the pioneer in committing the regulation of railroad affairs to a body of this kind, was also the first to impose on its railroad commission the duty of giving hearings to applicants for the privilege of building new lines, and of deciding thereon with reference to public convenience and requirements and the justice and policy of permitting competition with the existing roads. The same class of duty is, however, now imposed upon the New York Railroad Commission, and a similar policy has been followed in other states to the great advantage of the public and the railroads themselves.

The latest tribute to the good effects of such legislation comes from Illinois. That state possesses in its Railroad and Warehouse Commission a body which is charged with supervising the relations of the railroads to the public, and which in the past has been distinguished more by the constant efforts it has maintained to lower transportation rates than by any inclination to recognize that the railroads or the owners of their securities were worthy of recognition by the state. The forthcoming report of the commission, however, contains a strong appeal to the legislature for action which will check the unnecessary duplication of existing railroad lines, and in setting forth its views on the subject the commission makes a strong representation of the evils which have followed from unrestrained railroad building, a tendency of which the state of Illinois offers, perhaps, some of the most striking examples. The report says: "Nearly all the railroads in the state have at some time been bankrupted, and the original investors have been subjected to great losses. To the general law, which authorizes the unrestrained construction of railways, bankruptcy and other financial embarrassments of the railroad companies may be largely attributed. This law enables irresponsible scheming promoters to obtain a franchise for a mere trifle, and, by means of fraudulent and false representations as to the value of such franchises, to induce capitalists to build a new road through a country that is already occupied by a road which meets the requirements and necessities of the public.

"While it is true that the operation of these unnecessary roads has been continuous, yet the character of the service is poor and unsatisfactory to the public, the physical condition is unsafe, and the revenues derived from the operation so small that employees are compelled to wait weeks and sometimes months for their wages. * * * Many of the lines for which franchises have been granted were never constructed, but by reason of purchase, consolidation or leases, only 117 proprietary and subsidiary lines are now in operation in this state. The franchise in many instances has been obtained without any intention on the part of the promoters of carrying the project into execution, but merely for speculative purposes. This is manifest injustice to lines already established and in operation. It seems clear that there should be legislative enactment restraining the construction of unnecessary and destructive new roads."

Continuing this line of argument, it urges that the authority to pass upon the questions involved in the creation of new lines should be lodged in some impartial tribunal prompted only by a desire to be equal and just both to the corporations seeking recognition and the people. It therefore recommends, as tending to the best interests of the people, that a law to carry its suggestions into effect be enacted by the legislature.

It might seem from this that the plea of the president of the Chicago & Alton Railroad, Mr. Blackstone, contained in the annual report of that company, for more equable treatment of the railroads by the state is bearing fruit.

A POSSIBLE HORSE FLESH EXPORT TRADE.

In view of the inroads made on the price of horses in the United States during the past year, as has been shown in BRADSTREET'S reports of quotations for live stock, provisions, grain and manufactured articles each quarter, whereby a reduction in the value of certain grades of nearly one-half has been suffered, it is of interest to note that the horse-meat market in Germany is advancing, owing to the exhaustion of the supply of cheap horses. Leaving aside the question of the cause of the reduction in the price in the United States, which may have been influenced in part by the advent of trolley and cable street cars and by the wider use of the bicycle, the situation of the demand for cheaper grades of horse flesh in Germany as contrasted with the comparative excess in supply thereof here is significant, in view of the suggestion by the Boston *Transcript* and other newspapers that horses may be raised here for their flesh to satisfy the demand abroad. Assertions have been made that horses can be produced in the west more cheaply than cattle, and it suggests itself that if true the former may be shipped across the sea alive; and it goes without saying, as is the case with the international cattle supply and demand, those influences may be used with relation to horses by slaughtering the latter here to supply the German and French markets, where 7c. a pound is paid for this variety of food. Horse flesh in Germany is sold smoked, and in America it would not be found difficult to supply this variety, thus enabling American farmers who have failed to find profit in horse rearing as great as formerly to branch out once more into this variety of industry. In 1888 there were in the United States 5,756,000 horses. In 1890 there were 15,498,000 horses in this country, and their total value was $1,000,000,000. At present the number is about the same as in 1892, but the estimated value has gone down to $576,730,000. Beyond a doubt this valuation is much too high. They are accounted for only partly by a great overproduction of horses during the last few years. But another cause of the lessened demand has been the universal depression of business. Merchants who used to employ eight or ten horses now get along with three or four; persons who formerly kept three or four horses for private use have found that one or two will serve, and so it goes everywhere. "In this way tens of thousands of horses have been thrown on the market, shutting off the demand for other horses fresh from the breeding farms. The end is not yet, for within a few years car fares in most of the cities will be reduced to 3c., further encouraging the use of those vehicles. Meanwhile the horseless carriage is looming up as a common conveyance of the near future." Sound and serviceable animals, it is said, can be bought for $6 and $7, such beasts as would have fetched $100 half a dozen years ago. The team horse that was worth $200 but about two years ago may now be purchased for $40. First-rate carriage horses and wagon horses cost just as much as they ever did, because the supply of them has at no time exceeded the demand.

IMPROVED BRITISH RAILWAY RETURNS.

Recent articles in BRADSTREET'S regarding the condition of trade in the United Kingdom and the improvement in it render easy of acceptance reports of British railway returns for the second half of 1895, which are in pleasing contrast to those for the half year ending December 31, 1894, and, for that matter, with those for like periods in preceding years. As in the case of railways in the United States, though to a less extent, British railways during latter halves of recent calendar years suffered from a lack of business and a depression in railway rates, which were emphasized by the big coal strike in 1893, but within recent months the movement has been in their favor. Gross receipts of twelve English roads between July 1 and December 31, 1895, amounted to £34,501,000, an increase of £1,295,000, or nearly 4 per cent., as contrasted with the corresponding period in 1894. Their total expenses amounted during the six months ending December 31 last to £18,813,000, an increase of £448,000, or 2.4 per cent., and the net revenue was £15,688,000, or an increase of £847,000, or 5.7 per cent., due in large part to the favorable expansion of the passenger traffic in the pleasant weather of last summer and autumn, and to the increased purchases of the general public and the consequent improvement of the state of general trade. The increase in gross receipts is almost general, the Manchester, Sheffield & Lincolnshire Company alone showing a decrease, and that a trifling one. As, however, the Sheffield Company was able to reduce its working expenses appreciably, it forms no exception to the general rule in the matter of dividends, being able to pay ¼ per cent. more than in the corresponding half year, and also carry over more. As a rule dividends have been greatly increased; £6,674,000 was distributed for last half year, against £5,970,000 for the second half of 1894, £371,000 being at the same time carried forward, against £302,000. The largest increase in dividend is that of the Great Eastern, which has risen from 2¼ per cent. to 4 per cent. The Great Western has also done very well, having increased its rate of dividend by 1 per cent., and the Great Northern, Lancashire & Yorkshire and London & Northwestern have each secured an additional ¾ per cent., while other companies show increases of ¼ to ½ per cent. In some respects the most remarkable increase is that of the Lancashire & Yorkshire, which company had done pretty well during the earlier portion of the year, while the other lines were showing poor results. The prosperity of the Lancashire & Yorkshire is due to the excellent state of trade in the woolen and worsted districts, especially the latter. "The current half year has opened in a most auspicious manner for railways generally." The Scotch lines, whose reports are made up to January 31, appear to have been doing at least as well as those of England. The London *Times* says that "the prospects of railways look all the brighter because at present there has been no material rise in coal or other articles whose cost enters largely into working expenses."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

The Secretary of the Treasury lately sent to the Senate, in response to a resolution of that body, a statement containing a copy of each obligation issued by the government since March 4, 1789, with a reference by title and date to the laws authorizing such issues; also the amount of each issue, the amount outstanding, properly classified, and including Treasury notes of every kind, bonds and certificates for currency, silver and gold. It is found that in the case of United States notes the total amount issued is $2,758,265,808, of which $449,338,902 represents the original issue, and $2,308,926,906 the reissues from time to time to replace mutilated notes surrendered and which were canceled and destroyed by the department in pursuance of law. The total amount of United States notes authorized was $450,000,000, including $50,000,000 temporary issue to be used only in redemption of the temporary loan. The highest amount outstanding at any one time was $449,338,902.

Several English mechanics lately detained at New York on the ground that they were contract laborers have been permitted to remain under special circumstances by Commissioner General Stump of the Immigration Bureau, with the approval of the Secretary of the Treasury. It appears that the mechanics in question came to this country under contract to set up cotton machinery made by parties in England, and sold to cotton mill men in Boston and elsewhere. This machinery is said to be new in the United States, and, therefore, it is necessary that persons familiar with its construction should set it up and put it in operation. Before permitting the men to land, however, the commissioner-general required the original contracts to be abrogated and new ones executed, particularly specifying the machinery to be erected, to whom sold, and strictly limiting the work to be done. The men also agreed to leave this country immediately on completion of the work contracted for. This case is regarded as of importance, as involving a new interpretation of the alien contract labor law.

CURRENT BUSINESS NEWS.

Industrial.

Eight thousand men and women, members of fourteen local unions of tailors, went out on strike in Chicago this week in sympathy with the clothing cutters and trimmers. The tailors also ask an increase of wages of 25 per cent.

More coal has been mined at the south than in any previous season, and sales have been widely extended into new territory.

The wages of about 1,000 tonnage workers in the Pittsburgh Oliver Iron and Steel Company has been reduced 10 per cent.

The steamer Umatilla sailed from San Francisco March 15 for Victoria and Puget sound ports, carried at least 100 miners with outfits for the gold fields of Alaska. "Many of them are going to Cook's inlet, while not a few are to brave the dangers of a north winter and attempt to cross the ice from Dyea inlet to the Yukon."

Alabama coal operators "have effected a deal with the Southern Railway to cover the immense coal market among the Mississippi sugar plantations south of Greenville, heretofore occupied by the Pennsylvania operators. This trade takes about 1,500,000 tons annually, most of which has been shipped from Pittsburgh by river."

The Lehigh Valley Railroad Company has restored the 10 per cent. reduction in salaries made in 1893.

The growth of the honey industry has been very rapid. According to the last census the production during the preceding year was 63,398,327 pounds, compared with only 25,743,208 pounds ten years earlier. It is not generally known that Iowa led in production with 6,813,000 pounds, although Utah and other western states have increased heavily.

The Chattanooga *Tradesman* says general business is very active and prices are well maintained. The iron market shows no change. Furnace outputs continue to be large, and but little iron accumulates in the storage yards.

The principal firms engaged in the coal trade on the great lakes met in Columbus, Ohio, on Tuesday, and formed a pool, the effect of which will be, it is said, an increase in prices of 25 per cent.

Oil has been struck near Independence, Mo., it is added, "in paying quantities."

Dissatisfaction with wages is reported in the Clearfield and Cambria districts of Pennsylvania, with an expected demand for increase April 1 and a possible strike.

The new bituminous coal combination, Columbus, Ohio, for the lake market which has been formed covers about 15,000,000 tons annual output, and most of the small increase in price, it is said, will go to the colliers in the form of more wages.

The Lackawanna Iron and Steel Company is erecting large ore ovens in Scranton, the cost of which will be $140,000. "The ore used at the mills, when mined, is impregnated with sulphur which must be eliminated, making the baking of the mineral necessary. When the ovens are in working order it is said that much of the cinders now hauled to the mills in the raw materials can be taken out at the ovens. The great expense of carting the residue from the mills to the dump, as it is done now, will be avoided."

Commercial.

A Chicago dispatch says: "Newport News has been added to the points from which the movement of flour and grain will be reported to the Board of Trade, the first returns being posted yesterday." BRADSTREET'S has included this important storage point in its report of the visible supply for many years past.

The movement started by the National Association of Manufacturers in favor of establishing a department of commerce, with a representation in the Cabinet, is spreading. The New York National Board of Trade has indorsed the proposition-as has the Boston Chamber of Commerce. The New York Board of Trade has passed resolutions urging Congress to establish the department, and at the next meeting of the New York Chamber of Commerce that body will be asked to vote in favor of the idea.

Financial.

The city of Augusta has just sold $56,000 4½ per cent. 30-year redemption bonds at the rate of $1,051.07 for each bond, which is regarded as indicating rising credit on the part of that flourishing Georgia city, inasmuch as the previous issue of redemption bonds brought only $1,020.70 each.

The April number of the *Forum* will have for its leader a noteworthy paper by Senator Sherman entitled "Deficiency of Revenue the Cause of our Financial Ills." The senator contends that the President and Secretary Carlisle mistake the cause of our present financial conditions in attributing it to the demand for gold for United States notes, and he thinks that the facts which he submits in his paper will convince everyone that the true financial policy is to supply the government with ample means to meet its current expenditures and to pay off each year a portion of the public debt.

The following securities were sold at auction this week at New York:

70,000	Shares Witte Water Placer Co., $20 each	$108,500
$20,000	The Lynchburg Street Railway Company 6 per cent. bonds, due 1910. July, 1896, coupons attached (hypothecated)	$13,500
13	Shares Adams Express Company, $100 each	150%
$5,000	Delaware, Lackawanna & Western Railroad Company 1st consolidated mortgage 7 per cent. bonds, due 1907. Registered	Withdrawn
$20,000	Glenwood Orchard & Irrigation Company 1st mortgage 6 per cent, gold bonds	$25 for lot
50	Shares German National Bank of Denver, Col., $100 each	Withdrawn
$25,000	Bonds Jefferson City Investment Company	$20
50	Shares Cambria Tile & Brick Company	$10
	Notes of E. Dunbar Wright, one for $15,000, dated June 5, 1894, and one for $1,500, dated June 5, 1894, payable on demand	$65
	Note of J. C. Hodges, Jr., for $16,558.33, dated July 15, 1895, due six months after date	$10
17	Shares American Exchange National Bank, $100 each	172¼
$5,000	Williamsburg Gas Light Company 1st mortgage 5 per cent. bonds, due April 1, 1900	105⅜
100	Shares United States Fire Insurance Company, $25 each	97½
10	Shares People's Trust Company of Brooklyn, $100 each	227¼
410	Shares Consumers' Cordage Company (ordinary), hypothecated	26
140	Shares Consumers' Cordage Company preferred, hypothecated	90
2	Shares Importers' and Traders' National Bank, $100 each	540
30	Shares Brooklyn Trust Company, $100 each	391
20	Shares Long Island Safe Deposit Company of Brooklyn, $50 each	68
100	Shares American Book Company, $100 each	150
20	Shares Brooklyn Academy of Music (with tickets), $50 each	165
8	Shares National Bank of Commerce, $100 each	204
15	Shares Columbia Bank, New York, $100 each	188
8	Shares Southern National Bank, $100 each	110
14	Shares Cleveland & Pittsburgh Railroad Company, guaranteed, $50 each	166
200	Shares National Broadway Bank, $25 each	235

Railroads.

The United States Supreme Court has affirmed the decision of the Supreme Court of the state of California to the effect that franchises, capital stock, etc., of the Central Pacific and Southern Pacific railroad companies were taxable under the laws of that state. The opinion declared that the railroad companies were state and not federal corporations, although having received franchises from the federal government. In this respect they stand upon the same ground as the Union Pacific Company, a corporation of Kansas, whose franchises were decided to be subject to state taxation by the Supreme Court.

A special from La Porte, Ind., says the statement is made here that a syndicate composed of New York and Cleveland capitalists is behind a project to build a system of interurban electric lines in northern Indiana, connecting various cities and towns. The design, it is said, is to start from Lake county, where the syndicate already own property, and establish a like network of such connection, extending around to touch South Bend, Valparaiso, Michigan City, La Porte, Elkhart, and half a dozen or more other places, and ultimately to relegate the railroad systems to the carrying of freight, while improved electric lines furnish the passenger service.

The Nashville, Chattanooga & St. Louis Railroad reports gross earnings for February of $419,337, an increase of $78,506 as compared with the same month of last year, and net $145,374, an increase of $9,984. For the eight months ending February 29 the gross earnings were $3,518,666, an increase of $422,661 as compared with the corresponding period of last year, and net $1,403,679, an increase of $118,056. Fixed charges were $1,000,629, leaving a surplus of $403,049, an increase of $131,578.

A Chicago dispatch says that after a legal fight of nearly four years between the city of Cairo and the Illinois Central Railroad Company, in which it was sought to compel the railroad to run all trains into town instead of connecting by a "bobtail" at Bridge Junction, the Central has finally capitulated, and will next Sunday commence running all passenger trains into the city.

A Berlin dispatch says the united committees formed for the protection of the Northern Pacific Railroad bondholders have approved the New York plan of reorganization of that company.

The all-rail east-bound shipments of dead freight from Chicago last week were 90,757 tons, against 87,563 tons the previous week and 65,587 tons the corresponding week of the previous year.

The Ohio and Pennsylvania branches of the new Nypano Railway Company have been consolidated into one company by articles of incorporation filed with the Ohio secretary of state at Columbus. The capital of the new company is $20,000,000.

The Tennessee Coal, Iron & Railroad Company reports net earnings for February of $81,446, an increase of $39,571 as compared with the same month of last year. For the two months ending February 29 the net earnings were $175,831, an increase of $82,956 as compared with the corresponding period of last year. Fixed charges were $95,768, leaving a surplus of $80,063, an increase of $95,623.

The following gross and net earnings are reported for the month of January this year and last:

Increase, gross, 10.2 per cent.; net, 19.5 per cent.

The New York Central & Hudson River Railroad Company has declared a quarterly dividend of 1 per cent., payable April 15. The company reports for the quarter ending March 31:

Gross earnings	$10,484,600	$9,835,818	Inc.	$648,782
Operating expenses	7,155,600	6,815,976	Inc.	339,624
Net earnings	$3,329,000	$3,019,842	Inc.	$309,158
First charges	2,644,000	2,647,477	Dec.	3,477
Profit	$685,000	$372,365	Inc.	$312,635
Dividend	1,000,000	954,283	Inc.	45,717
Deficit	$315,000	$581,918	Dec.	$266,917
FOR NINE MONTHS ENDING MARCH 31.				
Gross earnings	$34,493,000	$31,994,868	Inc.	$2,498,132
Operating expenses	23,345,000	21,309,693	Inc.	2,035,307
Net earnings	$11,148,000	$10,685,175	Inc.	$462,825
First charges	7,922,000	7,905,092	Inc.	16,908
Profit	$2,226,000	$2,780,083	Inc.	$445,917
Dividend	3,000,000	3,339,990	Dec.	339,990
Surplus	$226,000	Def. $559,907	Inc.	$785,907

The Metropolitan Street Railway Company reports for the quarter ended December 31:

	1895.	1894.	Changes.	
Gross earnings	$1,838,122	$1,419,557	Inc.	$418,565
Operating expenses	926,016	811,538	Inc.	114,478
Net earnings	$912,106	$608,019	Inc.	$304,087
Other income	38,156	52,005	Dec.	13,849
Total	$950,262	$660,024	Inc.	$290,238
Fixed charges	592,805	503,049	Inc.	89,756
Surplus	$357,457	$156,975	Inc.	$200,482

Cash on hand, 287,566, and profit and loss surplus, $1,166,950.

The report of the Texas & Pacific Railway Company for the year ended December 31, 1895, shows:

	1895.	1894.	Changes.	
Gross earnings	$7,015,309	$7,353,013	Dec.	$337,704
Operating expenses and taxes	5,400,661	5,489,823	Dec.	89,162
Net earnings	$1,614,648	$1,863,190	Dec.	$248,542
Other income	86,324	71,954	Inc.	14,370
Total	$1,700,972	$1,935,144	Dec.	$234,172
Interest and rentals	1,351,884	1,373,325	Dec.	21,441
Surplus	$349,088	$561,819	Dec.	$212,731
Other expenditures	194,116	293,484	Dec.	99,368
Balance to income	$154,972	$268,335	Dec.	$113,363

Miscellaneous.

Secretary J. Sterling Morton is preparing to carry out the mandate of Congress, which requires him to distribute 10,000,000 of packages of seeds during the present fiscal year. He will, however, purchase the seeds from seedsmen, ready packed, "thus obviating the employment of a large number of women who have annually been engaged at the department in preparing seeds for shipment upon the orders of senators and representatives." The Secretary proposes to test all seeds furnished and to purchase seeds for distribution only after rigid test as to their quality, made under supervision of experts in the Agricultural Department.

The Tacoma *West Coast Trade* says that Portland, Ore., has raised $32,000 to promote immigration, and "invites Washington to join with Oregon in the work of bringing settlers to the Pacific northwest, instead of each state laboring separately."

The *West Coast Lumberman* and *Puget Sound Lumberman*, both able representatives of the great lumber and shingle industry of the Pacific northwest, have consolidated under the name of the *West Coast and Puget Sound Lumberman*. An enlarged and improved publication is promised.

There are eighty-three manufacturing industries along the line of the Seattle, Lake Shore & Eastern railway (Washington state), employing 1,360 men and disbursing $70,720 in monthly wages, according to a table compiled by the *Trade Register*. Eight saw mills, fifty-three shingle mills, and thirteen lumber and shingle mills have a capacity of 1,132,000 feet of lumber and 5,867,000 shingles daily; nine logging camps put in 385,000 feet of logs daily, and one leather tannery turns out two tons weekly.

Tacoma's first carload shipment of cedar doors to England was started east March 9.

Judge Coxe, of the United States District Court at Utica, N. Y., has handed down a decision of importance to the manufacturing industries and inhabitants of Buffalo, where for a long time quantities of natural gas, piped from Canada under the Niagara river, have been used. The question was raised some time ago whether this gas was dutiable, and the matter was referred to the Board of General Appraisers, who held that it was dutiable. On application of the Natural Gas Fuel Company the board reconsidered its decision and overruled it, holding that natural gas is a crude bitumen and a crude mineral, and therefore exempt from duty under the act of 1890. It is this decision which has now been sustained by Judge Coxe.

President Cleveland has approved the act authorizing the distribution of the World's Fair medals and diplomas.

Foreign.

Wheat engagements for Australia in California on January 31 were reported to aggregate about 50,000 tons, "so there can be no doubt, provided the New Zealand crop comes up to expectations, that all Australian requirements are more than provided for. The future, therefore, of prices there will depend upon the extent to which Australian farmers hold their wheat."

At the London sale of Hudson Bay furs this week silver fox, cross fox and red fox skin have declined 30 per cent., blue fox 40 per cent. and white fox 50 per cent. from the prices of 1895. Marten furs have advanced 10 per cent.; otter, 7½ per cent., and fisher, 7½ per cent.

Twenty-two countries have given notice of their intention to take part in the exhibition to be held in Paris in 1900.

A discovery of platinum is reported to have been made near Cordobolin, New South Wales. Some 1,200 ounces of the metal had been obtained.

There is a movement on foot among certain public men in Germany to put additional burdens upon the industries of that country. "Not content with compulsory insurance against accidents and the invalid pension system, they are now beginning to agitate for some scheme of insuring workmen against being out of work."

Advices from Havana intimate that on account of the impediments to the grinding of sugar caused by the civil war in Cuba, the probable shortage of Cuban sugar this year will be 873,000 tons, or 87 per cent. of the normal crop. In the great sugar producing provinces of Matanzas and Havana not one estate is now grinding, though this is the busiest time of the year for that industry. What is true of the sugar crop is also said to apply to tobacco.

The British Agriculture Produce bill, which provides for the marking of foreign and colonial meats and the registration of persons who deal in them, has passed its second reading in the House of Commons. A member quoted the House of Lords' committee report, showing that many stores in the west end of London sold little else than American beef, and at the same price as home-grown British meat; that British agriculture was thus seriously injured, and that he would "favor marking American cheese, which was similarly sold."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Corporation—Taxation—Farming.

The Kentucky Court of Appeals held, in the recent case of The Benedictine Order of Covington vs. Town of Central Covington, that a person who has been instrumental in procuring the incorporation of a town embracing his land, and has paid taxes to the town for several years, cannot recover back the taxes paid or refuse the further payment of taxes upon the ground that his lands are used for farming purposes and derive no benefits from the town. This rule was applied in the case to the property of a corporation, which was held to be bound by the acts of its business manager.

Insolvent Corporation—Receiver.

The Supreme Court of Minnesota held, in the recent case of Basting vs. Ankeny, that the receiver of an insolvent corporation, appointed in proceedings under the General Statutes of 1894, section 5897, may maintain an independent action to enforce the collection of the amount of a call on unpaid subscriptions made by the board of directors in accordance with the by-laws and due and payable prior to the commencement of the proceedings which resulted in the appointment of the receiver, and that the regularity, propriety and validity of the appointment of a receiver can only be questioned in a direct proceeding to test that question.

Husband and Wife—Creditors.

The case of Buffington et al. vs. Mosley et al., recently decided by the Kentucky Court of Appeals, was one in which the evidence was found sufficient to show that a conveyance from husband to wife was both actually and constructively fraudulent as to the husband's creditors. The court held that even though the land was not subjected to debts created after notice of the conveyance, yet as it did not sell for enough to satisfy the antecedent debts, the fact that the judgment directed a sale to satisfy all the debts was not ground for setting aside the sale, and that as the husband and wife appeared and contested the grounds of attachment, it was too late to make the objection in the appellate court for the first time that no copy of the order of attachment was delivered, the return of the officer showing the levy upon the land.

Usury—Sale—Loan—Depreciation.

The Supreme Court of Minnesota held, in the recent case of Saxe vs. Womack et al., that the price of property sold in good faith may be included in the same security with money loaned, and the fact that the price was large and more than the property could have been sold for does not necessarily condemn the transaction as usurious; that the inquiry in such a case is whether upon the evidence there was any corrupt agreement or devise, or shift, to receive or take usury, and in this aspect of the case the quo animo, as well as the acts of the parties, is most important; that such a transaction is not per se illegal, though it may be so, and that because an article is depreciated in the market it does not follow that the owner is not entitled to demand or receive a higher price as a condition for parting with it.

Incorporation—Fees—Indiana Law.

The Supreme Court of Indiana held, in the recent case of The State of Indiana vs. Chicago & Eastern Illinois Railroad Company et al., that the laws of Indiana require that the secretary of state shall neither file nor record articles of incorporation until the fees therefor are paid, and the mere presentation to the secretary of such articles does not constitute a filing for record; that since the fees for such filing belong to the state, its officers cannot waive the prepayment of such fees, and that upon proof that a clerk in defendants' law department presented articles of consolidation to the deputy secretary of state for filing, and upon being told the fee that would be exacted said that he had not a tenth so much money with which to pay for the same, and with the consent of the deputy secretary of state took the articles away with him, the defendant did not become liable to pay any fees whatever.

Municipality—Opening Streets.

The Supreme Court of Georgia held, in the recent case of The City Council of Augusta vs. Georgia Railroad and Banking Company, that in order to authorize a municipal corporation to take for the purpose of opening or extending streets property already devoted to public use, the power must be conferred in express terms or by necessary implication; that a general power conferred by legislative enactment upon a municipal corporation "to open new streets, change, widen or to extend streets already opened within the corporate limits," does not expressly confer upon the corporate municipality the authority to take and use for this purpose land already in use by a railroad company for purposes embraced within the provisions of its charter, and that in determining whether or not such authority arises by necessary implication in a given case under the above recited enactment, the legislative intent is to be arrived at by applying the statute to the subject matter, and if both the uses do not reasonably stand together the authority is not to be implied, otherwise it may be.

Corporation—Purchase—Liability.

The Kentucky Court of Appeals held, in the recent case of The Georgetown Water Company vs. Central Thomson-Houston Company and others, that the secretary and manager of a corporation had no power to bind the corporation for the price of goods furnished for the use of another and distinct corporation; that a check therefor executed by him in the name of the corporation imposed upon the corporation no liability, although he may have acted under the direction of the president and directors in purchasing the goods and executing the check, as the charter of the corporation conferred upon its officers no power to create a liability for the benefit of another corporation; that if the corporation had obtained the goods and used them in its business, it would be estopped to deny its responsibility; that the charter of a corporation is the grant of its power, and of this those trading with its agents must take notice, and when the agent exceeds his power corporate liability ends; that although the defendant by one paragraph of its answer alleged that it or its employees had possession of the articles forming the consideration for the check sued on, and offered to return them, yet as a demurrer to that paragraph was sustained, and defendant by its rejoinder denied that the goods were sold to the company or that it received or appropriated any of them to its own use, it was competent for it to show that the goods were purchased for and used by another corporation, and thus to escape liability, and that the holders of mortgage bonds which were a lien upon the property of a corporation were necessary parties to a suit in equity seeking a sale of the property to satisfy a judgment against the corporation in favor of other creditors, and that a decree directing a sale of the property when the bondholders were not before the court, and the sale thereunder, were void, although the sale was directed to be and was made subject to the liens.

Bank—Notary—Services—Agreement.

The Court of Appeals of the District of Columbia held, in the recent case of The Ohio Bank of Washington vs. Hopkins, reported in the Washington *Law Reporter*, that the fees of a notary public for services rendered by him are all fixed and determined by law, and for the performance of such services he has no right to ask more or less than the fees prescribed, nor has any person for whom such services are performed the right to require him to render them for less than the fees fixed by law; that a bank owning paper protested or noted for protest is bound to pay the fees prescribed by law for the official service rendered, and where the bank, in employing a notary in his official capacity, is a mere collecting agent for its correspondents, it is bound to place the paper in the hands of a competent and careful notary and pay him the lawful fees for his services, and charge the same in account to the correspondent for whose benefit the service was rendered; that an agreement between a bank and a notary public that, in consideration of the bank employing the notary to do its notarial work, he would accept in full payment for his services one-half the usual and legal fees chargeable therefor, the remaining one-half to be retained by the bank as its own, was without any valid consideration, and therefore void; that such an agreement was also void because in contravention of sound public policy, being, in effect, an assignment of one-half the fees to be earned by the notary in future, which is not allowable, and that assignment by a public officer of the salary or fees of his office before they are due and payable is contrary to public policy and void. The court said: "The policy is obvious that will forbid such relation to exist as that created by the agreement set up in the affidavit of defense between a bank and a notary public handling the paper affecting the rights of third persons, and where the incentive might often be strong to suppress or conceal the evidence of the negligence of each other. The notary is intended to be, and from the nature and importance of his office should in all cases be required to act, entirely independent of any influence of the bank or agent placing paper in his hands."

BUSINESS NOTES.

Why Spain Holds on to Cuba.

The London *Statist* says: "It is natural, at the same time, that Spain should cling with tenacity to Cuba. Once Spain lorded it over the whole of Central and South America, and a very large part of North America likewise. Now every inch of her continental possessions is gone, and she retains only a few islands off the coast. That she should prize these even beyond their worth is most natural. That she should spend blood and treasure freely to retain them is in accordance with human nature. But, looked at from the economic point of view by those who are not stirred by Spanish feeling, it is certain that the connection with Cuba is a disadvantage to Spain."

The Indian Tobacco Industry.

At the London Imperial Institute meeting, Indian section of the Society of Arts, recently, Mr. C. Tripp read a paper on "The Tobacco Industry of India and the Far East." Mr. Tripp "pointed out that Sumatra was enjoying an amount of prosperity perhaps unequaled in any other part of the globe. India's natural advantages, though inferior to those of Sumatra, might be turned to excellent account if skill, experience and more capital were bestowed upon the industry. India had abundant native labor, of which neither Borneo nor Sumatra could boast. When the prejudice against home-made cigars could be removed, and India and Borneo were recognized as first-class tobacco-producing countries, it would then be possible to see cigars grown on British soil with British capital, and made by British hands."

Spain's Finances.

The London *Statist* says: "Practically, Spain has never paid her way. She has always had to borrow to pay the charge for her debt. She has again and again defaulted. She has reorganized the debt. She has reduced it in all manner of ways. And since her last settlement with her creditors she has paid the interest out of borrowed money just as before. Spain, therefore, in the truest and most literal sense of the word, is insolvent. But she has somehow or other managed to raise money enough to pay her creditors up to the present. It is said that negotiations are going on with France which will result in another Spanish loan being brought out in Paris. That remains to be seen. A French loan, of course, would be an immense advantage for the time being. But it would be a much greater advantage to Spain than to the French investors."

Manitoba.

Mr. Henry M. Stanley, M. P., took the chair recently at the London Imperial Institute, when a lecture was delivered by Mr. A. J. McMillan, agent of the Manitoba government, on "Manitoba: Its Capabilities and Requirements." The lecturer pointed out that "in 1895 25,000 farmers in Manitoba produced over 60,000,000 bushels of grain, the yield averaging 28 bushels per acre, as compared with 13 bushels in the United States. In some instances last year there was a yield of as much as 57 bushels to the acre. The area of Manitoba was about 50,000,000 acres, of which only 2,000,000 were under crop. This province alone could now supply the United Kingdom with all the wheat she found it necessary to import. Great attention was now being paid to cattle raising and dairying, and last year 50,000 cattle and 15,000 sheep were exported. There were 61 cheese and butter factories. The government offered free farms of 160 acres to settlers. The great exodus from the United Kingdom to places other than the colonies sapped the life of the empire."

Cuba's Sugar Crop.

The Philadelphia *Ledger* says: "What appears to be a carefully compiled review of the Cuban sugar crop shows that the total amount made up to March 1, at which time the grinding season was half over, was 63,298 tons, as against 319,326 tons at the same time last year. Doubling this for the whole season would give 126,596 tons, while last year the estimated yield was 1,000,000 tons, showing a decrease of 87.3 per cent. Even this scanty percentage will not be realized unless Gomez can be driven out of the sugar-producing district, of which he now occupies four-fifths, as he has given orders that no sugar shall be made. It is added that the estimate for sugar will hold good also for tobacco. The statement is made with a degree of circumstantiality that argues thorough knowledge of the situation, and it is at least partially confirmed by the action of the Sugar Trust, reported last week, in buying up vast quantities of sugar in Egypt, Germany and elsewhere. It is the most convincing argument for the success of the revolution that could be had, for it shows that the insurgents control practically all the revenue-producing sections of the island."

Japan on the Sea.

Evidences of great activity, political and commercial, in the affairs of Japan, China and the countries of the Far East come to the Washington legations. A late dispatch says: "As a result of Japan's prosperity, brought about by the successes in the war with China, that country has not only determined to largely augment her navy, but also to establish commercial steamship lines connecting the United States with Japan. The Japan Steam Navigation Company is preparing to enter this new field, running between San Francisco and Yokohama in competition with the Pacific Mail and the Oriental and Occidental lines, now controlling this trade. New steamers are to be built, and the representative of the company has recently passed through Washington on his way to contract for the ships, two of which probably will be built in this country and two in England. There appears to be little further doubt that two of Japan's new warships will be built in the United States, and although the contracts have not been let, the indications are that the Cramps of Philadelphia will build one and the Union Iron Works of San Francisco the other. The Japanese Parliament has passed the naval appropriation bill, giving $20,000,000 for the single item of new warships."

English Agricultural Banks.

At the recent (second) annual meeting of the Agricultural Banks Association (London) Mr. R. C. Yerburgh, M. P., who presided, "said that many measures had been taken to keep the laborer on the land and enable him to rise. But the laborer must be supplied with capital to work his land. Their association had adopted the 'Raiffeissen' scheme, which had worked satisfactorily in Germany since 1849, and later in Austria and Italy. Loans were made for a long period and for a specific purpose. He believed they would in time enable their agriculturists to compete with the foreigner. They had met with the support of leading bankers. They had now fourteen banks in existence. The association has issued a letter showing that these are purely coöperative. They enable the agricultural laborers to borrow cheaply small sums at opportune times for seeding, manuring or stocking their holdings, or for other profitable purposes. All classes are now beginning to recognize in the movement a powerful lever for assisting the deserving and struggling villagers. The Credit Bank of Doneraile, in Ireland, shows a profit on the year's working, and the public auditor states that this bank can now be taken as an example over the country. Official documents show that credit banks abroad have encouraged coöperation in all its forms, stimulated thrift and self-help, and have improved the whole moral and material condition of their members."

Commercial Prospects in Africa.

At a recent meeting of the London Foreign and Colonial Section of the Society of Arts "Mr. G. Scott Elliott read a paper on 'The Commercial Prospects of English East Africa and British Central Africa.' He said that the lower part of British Central Africa might be regarded as a sort of small Ganges valley, capable of producing many valuable plants and supporting an enormous population, but unsuitable for Europeans. At levels between 3,000 feet to 5,000 feet there was already a flourishing community, and the trading results showed a total of £85,000 in 1895, as compared with £19,000 in 1893. Labor would not be a difficulty, and the population would increase to a degree which we could scarcely realize at present. A very small capital would be sufficient to prove practically the prospects of cattle ranching and plantation in the Masai highlands. Colonization of an Australian type in Africa was only possible above 5,000 feet. As for practical suggestions, the first essential was the maintenance of our national policy of non-interference with planters and settlers. The next was to avoid monopolies or concessions. Another was to trust the man on the spot with the fullest responsibility, and not to make the administrator a telegraph clerk. Our own country needed an outlet for congested capital and overflowing population, new markets, and that all our imports of food and the raw material of manufacture should be derived from British countries. All these requisites were fulfilled by parts of Africa in our possession."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade throughout the United States for the first quarter of 1896 is disappointing. When the improvement in industrial and commercial lines between March and September, 1895, is recalled, occurring, as it did, two years after the panic of 1893, reason would seem to have been behind the confidence that the calendar year 1896 would bring a general revival. But the most favorable reports at this time are those which declare the volume of business only equal to, in a few instances in excess of, the like total one year ago.

The fact that interior merchants are buying more freely in Missouri, Kansas, Oklahoma and parts of Nebraska, where the snow and rain have prepared the soil for the crops, constitutes almost the one favorable announcement for the week. In almost all other parts of the country, east of the Mississippi, stormy weather has tended to check the volume of business and still further restrict mercantile collections, which have now been exceptionally slow for more than a month. The winter's jobbing business in staple lines, with few exceptions, was unsatisfactory, as has been that for the coming spring. The prolonged falling off in demand in the iron and steel, cotton, woolen and shoe industries presents no sign of early improvement. As a consequence, hides, leather and shoes are all weaker—in some instances lower. Ginghams and print cloths have sold for less money within the week; the demand for American woolen goods remains in marked contrast to the active request for like goods of foreign make, and quotations for some grades of iron are lower than last week, without prospect for immediate improvement. Wholesale trade in men's wear, including clothing, is depressed by heavy stocks carried over, and low quotations for domestic wool have sent some abroad.

The unusually large number of business failures taking place during the first quarter of the current year promises to make a record. The total for the current week throughout the country is 300, or 18 more than last week, 48 more than in the like week 1895, 103 more than in the corresponding week of 1894, and 98 more than in the third week of March, 1893.

While distribution of merchandise at the northwest is not as active as a few weeks ago, it is of larger volume than a year ago. Country bankers in that and in regions further south have been withdrawing Chicago balances, but northwestern jobbers continue confident of the revival of the country demand. General business at the south remains unchanged, and at Portland and Tacoma, on the Pacific coast, also. Some improvement is reported at Seattle, and lumber mills in the state of Washington are expected to advance prices soon.

In addition to reactions in quotations noted, prices for wheat flour, wheat, pork and lard are lower, while those for Indian corn, sugar, both raw and refined, cotton, and for crude and refined petroleum are higher. The continued advance in the price for cotton, in the face of reductions in quotations for manufactured products thereof, during a fortnight, indicates that expectations of a large (new) crop of cotton have been permitted to unduly attract attention from the comparative shortage of present supplies.

The more moderate volume of general trade is reflected in bank clearings, the week's total, $976,000,000, continuing the recent tendency to get below the billion-dollar mark. There is, nevertheless, an increase in aggregate clearings amounting to 3.5 per cent. over last week, 2.5 per cent. compared with the third week of March, 1895, and as contrasted with the corresponding total in 1894, 3 8 per cent. The week's clearings totals are 20 per cent. smaller than in the like week in 1893, 15 per cent. smaller than 1892, and 5 per cent. smaller than in the corresponding week in 1891.

There is a sharp decline in total exports of wheat (flour included as wheat) from both coasts of the United States this week, the total amounting to only 1,592,000 bushels, against 2,401,000 bushels last week, 2,988,000 bushels in the week one year ago, 2,343,000 bushels in the third week of March, 1894, and 2,766,000 bushels in the like week of 1893. This is the smallest grand total of exports of wheat (with wheat flour included) since the last week of July, 1895. Exports of Indian corn this week amount to 1,802,000 bushels, against 1,708,000 bushels last week, 486,000 bushels in the week one year ago, 1,119,000 bushels two years ago, and 904,000 bushels three years ago.

Stock speculation at New York is dull and prices weak under professional selling, induced by unfavorable views of general trade conditions. Europe takes no interest, the Anglo-French complications about Egypt limiting the London market. The firmness of money here and narrow conditions in regard to mercantile accommodations have a deterrent effect on both speculation and investment. Activity is confined mainly to manipulated industrial shares. The Northern Pacific reorganization plan has caused selling of the company's stock to avoid the heavy assessments. The plan, backed as it is by large financial interests, and the assents of majorities of all the securities affected, is considered a foregone success. Foreign exchange is dull and weak at 4.87½@4.87¾ for sight sterling, the absence of inquiry being the feature.

Business in the province of Ontario, Dominion of Canada, like that in many portions of the United States, is duller than expected. There, as in the province of Quebec, country roadways continue heavy, and transactions with interior merchants are unfavorably affected. Jobbers at Toronto and Montreal report business in some lines about equal to that one year ago, though collections are difficult to make, and there is more demand for renewals than usual. Trade in Nova Scotia is dull and collections poor. In New Brunswick business is of fair volume; there is a good movement of cured fish, and shipments of lumber to the United States are increasing. The outlook for the Newfoundland sealing fleet is good. Bank clearings at Winnipeg, Hamilton, Montreal and Halifax amount to $17,599,000 this week, nearly $1,000,000 less than last week, and about $500,000 less than in the corresponding week one year ago. As compared with the third week of March, 1894, Canadian clearings are about $900,000 larger this week, but about $2,600,000 smaller than in the corresponding week of 1893. Business failures in the Dominion of Canada number 40 for the current week, against 58 in the preceding week, 40 in the corresponding week of 1895, 41 in 1894, and 30 in 1893.

FINANCIAL.

The Money Market.

The calling into the Treasury of 20 per cent. of the special deposits in certain banks of about $20,000,000 of the proceeds of the last bond issue supplemented the influence of the transfer of money to interior points which usually begins at this time in preparation for the April 1 settlements in the country. Demands for funds from nearby local centers were quite brisk, and the New York money market has displayed a tone of increased firmness. The discrimination in regard to certain kinds of commercial paper referred to last week has become more noticeable, and only the best class of names are receiving any attention, rates being adjusted, according to quality, at 6 per cent. or less. The out-of-town demand for paper is naturally in abeyance at this time. Time money is also firmer and in better demand; 4@5 per cent. for short and 5 per cent. for long periods. Call money has been irregular, the Stock Exchange quotations varying all the way from 2 to 4½ per cent., and renewals have generally been on the basis of 4 per cent.

The New York Banks.

Again on last Saturday the statement of averages for the preceding week issued by the New York Clearing House shows an increase in loans, this time of $2,038,000. Since February 1 this item has been swollen by $19,384,900. This was the principal change, the cash holdings decreasing $1,554,400, while the deposits were $925,100 larger, and the surplus reserve suffered a further reduction of $1,785,675. The figures of the statement compare as follows with those of the preceding week:

	Mar. 7, 1896.	Mar. 14, 1896.	Changes.	
Loans	$464,488,900	$466,526,900	Inc.	$2,038,000
Specie	61,538,100	60,845,100	Dec.	693,000
Legal tenders	83,917,500	83,056,100	Dec.	861,400
Deposits	488,884,400	489,809,500	Inc.	925,100
Circulation	13,983,800	14,234,800	Inc.	251,000
Total reserve	145,455,600	143,901,200	Dec.	1,554,400
Reserve required	122,221,100	122,452,375	Inc.	231,275
Surplus reserve	23,234,500	21,448,825	Dec.	1,785,675

At the corresponding period last year the surplus reserve was $17,598,775, against $77,302,300 in 1894.

The Boston Banks.

	Mar. 14, '96.	Mar. 7, '96.	Changes.	
Loans	$157,712,000	$157,965,000	Dec.	$253,000
Circulation	9,731,000	9,583,000	Inc.	148,000
Deposits	93,569,000	93,161,000	Inc.	408,000
Due from reserve agts	17,698,000	16,624,000	Inc.	1,074,000

† Not included in totals because containing other items than clearings. § Not included in totals because of no comparison for last year.

Silver.

Mr. Balfour's recent speech in Parliament, indicating that while England would entertain a new international conference, bimetallism could have no place in its own monetary system, has put a damper on speculation in silver and silver securities at London. The decline in the quotations for bars shown below was due to this, and is the more striking in view of the fact that the Indian budget is very satisfactory, showing a larger surplus than had been expected. The New York market followed London in its downward course, there being no other feature in the situation.

SILVER PRICES.

	Mar. 14.	Mar. 16.	Mar. 17.	Mar. 18.	Mar. 19.	Mar. 20.
London	31 9-16d.	31 5-16d.	31 7-16d.	31⅜d.	31⅛d.	31⅛d.
New York	69⅛c.	68½c.	68⅞c.	68⅝c.	68⅜c.	68⅜c.

Foreign Exchange.

Dull and, on the whole, weak conditions have prevailed in the exchange market. The supply of commercial bills was somewhat better, and it is also understood that some sterling loans were effected, resulting in a limited amount of drawings. The feature, however, was the absence of any marked demand, which fact may be in part explained by the narrowness of the money market and the restriction upon discounts. The posted figures were unchanged throughout for demand sterling, which has remained at 4.88½. The nominal quotations for sixty-day bills on London were, however, reduced ½c.—to 4.87—on Wednesday last, when actual business in both classes showed considerable weakness and discount rates in London stiffened appreciably.

POSTED QUOTATIONS OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 14.	*Mar.* 16.	*Mar.* 17.	*Mar.* 18.	*Mar.* 19.	*Mar.* 20.
4.87½ @ 4.88½	4.87½ @ 4.88½	4.87½ @ 4.88½	4.87 @ 4.88½	4.87 @ 4.88½	4.87 @ 4.88½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.87¾ @ 4.88	4.87¾ @ 4.88	4.87½ @ 4.87¾	4.87½ @ 4.87¾	4.87¾ @ 4.87¾	4.87¾ @ 4.87¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.86½ @ 4.86¾	4.86½ @ 4.86¾	4.86½ @ 4.86¾	4.86½ @ 4.86¾	4.86½ @ 4.86¾	4.86½ @ 4.86¾

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88@4.88¼; commercial bills, 4.86@4.86¼; francs, 5.18⅛@5.16¼; reichsmarks, 95@95⅜.

The Bank of England discount rate remains at 2 per cent. The bank this week gained £243,000 in bullion, and its proportion of reserve is 62.50 per cent., against 62.46 per cent. last week. In the London open market discounts have been a little firmer at 13/16@⅞ per cent. and call money steady at ½ per cent.

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending March 13, 1896:

	1896.	1895.
Dry goods	$2,877,582	$3,867,116
General merchandise	6,558,271	8,363,669
Totals for the week	$9,435,853	$12,230,785
Previously reported	103,098,542	100,010,285
Since January 1	$112,534,395	$112,241,070

The total value of exports (exclusive of specie) from New York to foreign ports for the week ending March 17 were $532,399 above those of last week. The following table enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,545,226	$8,507,357
Previously reported	76,686,047	68,672,153
Since January 1	$85,231,273	$77,179,510

Imports and exports of the United States for the month and eight months ending February, 1895 and 1896 (preliminary figures for 1896, corrected to March 14, 1896), were as follows:

February. MERCHANDISE.	1895.	1896.

THE STOCK MARKETS.

The New York Stock Market.

Dullness, accompanied by depression, has marked the speculative situation this week. Transactions have been almost entirely professional, and the market, as a whole, very narrow. Some liquidation of long holdings could, however, be traced, and the trading element on the Stock Exchange sold stocks at times with more or less vigor, although the increase of the short interest resulting therefrom resulted in some covering, and furnished the only support to prices that was at all in evidence. The public is absolutely out of the stock market, and London's indifference to and distrust of the speculative situation here is no less apparent than in the past. All departments there were, indeed, unsettled during the early days of the week by the attitude of the French government in relation to England's policy in Egypt, though by last Thursday this situation had improved sufficiently for a bullish movement to assert itself there. The interest in American stocks is, however, of the smallest character, and though London bought late in the week, it was in such trifling amounts that no effect was produced. The fact that foreign exchange rates keep steadily below the gold export point does not fail to attract attention. Any beneficial effects on speculative sentiment are, however, offset by a general appreciation of the fact that this is the result of the hardening of the money market.

The latter circumstance in connection with the extreme lateness of the season and the unfavorable condition of general trade would furnish the explanation for the bearish tendencies in speculation. The results of the poor business in many lines during the autumn and winter are also cropping out in the form of failures. Wall street, perhaps, is inclined to exaggerate such circumstances, and to regard as general the conditions which affect only particular localities or interests. Nevertheless, the unfavorable impressions which undoubtedly exist in financial circles as to the present outlook for the business community necessarily affect the temper of speculation and check investment. Another factor of some importance is the slow movement of corn. The general unwillingness of farmers to sell at the present price reduces the tonnage and profits of western railroads, and creates a sense of disappointment which is shown in the inactive speculation in railroad shares generally, despite the evidence that the new Joint Traffic Association is working well, and that the trunk-line and other roads are conducting competitive business with a minimum of rate-cutting or friction. Nor is it possible to ignore the fact that the approach of the presidential campaign has an unsettling effect, and that this feeling is supplemented by the apparent venturesomeness of the present Congress in regard to the country's foreign relations, and its impotency when the finances and currency are at stake.

The result of all these influences has been a narrow and weak market, the principal activity being in the industrial shares, temporary rallies being produced by the covering of short contracts. The most important event of the week was the appearance of the Northern Pacific reorganization plan on Monday morning. This scheme is fully discussed in another column. So far as the company's securities were concerned, its immediate effects were to depress the preferred and common stocks, which fell from 3 and 15 to 1¾ and 11⅜, respectively, the preferred rallying to 12. The selling was in part short stock, but many holders doubtless took the opportunity to escape the assessment. On the other hand, the consolidated 5 per cent. bonds advanced from 45¼ to 49⅞. Some disappointment was experienced by the street because the powerful interests which underwrite the Northern Pacific plan have not supported the company's securities on the general market. The explanation of this is doubtless found in the circumstance that a majority of all the interests affected by the plan had assented to its provisions in advance, so that there was no necessity of affording artificial encouragement to holders of the stock.

Among the industrial stocks American Tobacco has taken the most prominent place. It is not pretended that public buying or selling of this security has much to do with its fluctuations, which have been very irregular. Its general tendency has been upward, the price rising from 80⅛ to 83½, various rumors about the probability of a May dividend or a settlement of the trade war being used in this connection. General Electric has been active at times, selling to realize profits and for short account depressing the price to 36, after which it rallied to 37⅜, a favorable annual report being expected. The grangers were comparatively neglected, and the only speculative movement of any note was in Burlington, which had some little support.

Boston Stock Market.

[Special to BRADSTREET'S.]

The tone has ruled easier for railroads, with general quotations lower at the close. Atchison has met with fair attention, but closes 1⅛ points lower. Chicago, Burlington & Quincy has been fairly active, but closes 2⅜ points lower in price, while other roads are quoted ½ point to 2¼ points lower. Coppers hold up quite well in price, the principal transactions being in Boston & Montana, which closes ¾ point higher. General Electric has been active, but closes 1½ points lower. Sugar closes 1¼ points lower, with free sales, while Bay State Gas has advanced ½ point under a good business.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending— *Price Mar.* 19, 1896.	*Price Mar.* 12, 1896.	*Sales Mar.* 19, 1896.	*Sales Mar.* 12, 1896.

GENERAL TRADE QUIET.

IRON, STEEL, COTTON, WOOL AND LEATHER INDUSTRIES REPORT AN UNSATISFACTORY DEMAND.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, March 20.—General operations continue quiet, and business continues moderate in volume. Money is quiet, with the choicest factory paper quoted at 4½@4¾ per cent. on four months, but some banks are asking 5½@6 per cent. for New England manufacturing paper, and 6 per cent. for western. Dry goods paper is quoted at 5½@6 per cent. Demand for money is restricted by slow business. More orders for boots and shoes are being taken, but manufacturers are giving way in price to a great extent in order to get the business. Leather is selling moderately, but the market is steady on about the basis of former purchases. Hides are quoted lower, with the eastern demand very light. Iron and steel are selling slowly, and the market is rather easy. Lumber is in fair demand considering the weather, with values about steady. Coal moves well at retail, but is slow with first hands.

Providence, March 20.—Trade continues quiet, notably with manufacturers of cotton goods, cotton machinery and rubber shoes, also with the wholesale dealers in dry goods, fruits, etc. Some lines of jewelry manufacturing, especially on the better grades, show an improvement over one year ago.

Philadelphia, March 20.—Unsatisfactory conditions continue in textile lines; buyers of cotton and woolen yarns are purchasing very cautiously. Dry goods jobbers report fair trade only. Petroleum is slightly more active. General dullness pervades all lines of morocco and leather goods. There is a fair demand for drugs, but very little doing in paints and glass. Tobacco is very dull; competition keen and prices are low. Coal is more active and prices well maintained.

Pittsburgh, March 20.—The volume of business is probably not as large as last week, weather conditions not being favorable. A fair demand is noted for all staples at prices that are generally satisfactory. Business in rubber goods during the past two weeks is large, and conditions are satisfactory except as to collections, which are very poor. While there is a perceptible increase in the volume of business in iron, prices are still low, in some lines a little lower than two weeks ago. Inquiries for raw material are more numerous than they have been for some time, and an advance in prices in the near future is looked for.

Buffalo, March 20.—This has been an exceedingly dull week in most all lines. The retail trade has been much depressed, owing to the unfavorable weather. It is claimed that collections are slower than they have been at any time during the past three years. In financial circles money is reported tight, with pretty good demand. Manufacturers of cars and railroad supplies are reported very busy. Aside from this, there is nothing encouraging to report.

Baltimore, March 20.—Business has been fairly good. The weather, however, has had some effect in keeping southern buyers out of the market. Collections continue fair.

West and Northwest.

Cleveland, March 20.—The week has developed no special change in the general trade situation. In leading lines the distribution is fair, and moderate only in others. Collections are not satisfactory, and weather conditions are not very favorable for the active movement of strictly seasonable goods.

Detroit, March 20.—In general merchandise the volume of business is reported fair for the season. Collections continue slow, though in some lines a slight betterment is noted.

Chicago, March 20.—There has been but little, if any, increase in the jobbing trade this week, owing to the cold, backward weather. A fair number of interior buyers have been in, but their purchases were small. There are few important features to note in dry goods, millinery, shoes or rubbers. Clothing is dull, and calls for shelf hardware, bar iron, steel and pig iron are confined to small lots. Prices remain steady. Southern pig irons are weaker and 25c. lower. Tanners are more anxious to sell leather, and are cutting prices, despite the better feeling that has occurred in hides within a few days. Lumber is low, and local dealers are cutting prices to secure bills. Poultry has advanced and eggs declined, with heavy arrivals of the latter. Wool receipts, 43,730 pounds.

St. Louis, March 20.—There is a slightly better feeling all around, but it is far from satisfactory, except with jobbers and manufacturers of leading staples. A majority of boot and shoe factories are running full time, and are contracting for supplies with a greater degree of freedom than for some time. The pig-iron market is weak, sales being small and for immediate delivery. Prices are somewhat easier on finished iron and steel for quick deliveries, but indications are for better values. Demand from railroads for equipment is encouraging. Hides are weak and declining.

Louisville, March 20.—General trade continues to increase in volume over last year, but a slight check is noticeable this week by reason of unfavorable weather. Collections are fair.

Kansas City, March 20.—Continued snow and

rain in Kansas, Missouri and Oklahoma have prepared the soil for good crops, causing improved orders in all lines of trade. Collections are fair.

Milwaukee, March 20.—Trade is quiet, it being fairly satisfactory for this time of the year, yet no distinctive improvement is noted. Collections are slow.

St. Paul, March 20.—Notwithstanding unfavorable weather during the past week has noticeably affected sales, trade in general lines is said to be considerably in excess of the corresponding week of 1895, and, it is believed, will continue so. Collections are still disappointing, but a better showing is looked for as the season advances, the feeling being quite general that there is considerable money in the country, or its equivalent in farm products, and that retailers will have good trade under present conditions. Collections are an improvement over last year.

Omaha, March 20.—The recent fall of snow throughout the state has had a bracing effect upon the jobbing trade, and there is a much better feeling. Seasonable goods have shown some increased demand.

Sioux Falls, March 20.—Jobbers report business below expectations; orders small, but collections very fair. Retail trade shows some improvement.

Southern Cities.

Charleston, March 20.—Wholesalers report trade very quiet. Collections are only fair.

Savannah, March 20.—Trade and collections are fair in wholesale and retail circles. There is an increase in receipts and shipments of spirits. Rosin is about the same and quoted firm.

Atlanta, March 20.—There is no change since last week. Collections are only fair.

Augusta, March 20.—Trade in all lines is very quiet. Jobbers of groceries and provisions are especially complaining. Collections are unsatisfactory.

Jacksonville, March 20.—A gain over preceding week in both wholesale and retail circles is noted. Local collections are good, country slow.

Birmingham, March 20.—Very little improvement is noted in business, the volume being small.

Chattanooga, March 20.—Trade in general and collections are fair. Most merchants are buying small bills.

Nashville, March 20.—Trade has reached a quiet stage, which is in a degree attributable to conservative buying, and largely to early purchases this year. Money is sticking to channels of regular trade and is very close for other purposes. Trading in securities light. Country collections fair for the season. City collections are dull.

Memphis, March 20.—General trade shows no material change.

New Orleans, March 20.—Jobbers report a fair volume of orders. Cotton is in fairly good demand. There is no demand for rice. Sugar is firmer and offerings meet prompt sales. Exports of bulk grain have decreased. The demands for loans good for the season.

Galveston, March 20.—Business in all lines is dull and unsatisfactory. Collections are still complained of.

Pacific Coast.

San Francisco, March 20.—No especially new features are noted in commercial lines. The produce market dull; wheat is not materially changed, though a shade firmer. There is but little foreign demand, and receipts are light. Collections are slow.

Portland, March 20.—Columbia river salmon canners have combined for the purpose of resisting the 1.5 per cent. discount asked by wholesale houses. Most of the Oregon lumber mills have joined the combination known as the Central Lumber Company, and an advance in prices is expected. Produce is dull; wholesale and retail trade in general is fair. Collections are only fair.

Seattle, March 20.—Trade shows some improvement, notably in hardware. Large shipments of general goods have been made to Alaska. Large numbers of people are going there to engage in gold mining.

Tacoma, March 20.—Greater quiet pervades almost all lines of business this week.

Canada.

Toronto, March 20.—General business is fair, but hardly up to expectations. Country roads throughout the province are in bad condition, and this has an adverse influence. A good many orders are being received for dry goods and hardware. Payments are slow. White wheat sold on the lines at 76c., a decline of 4c. for week.

Montreal, March 20.—General business continues dull but fairly steady, and sales average about the same as last year. There are no special changes in values. Collections are reported unsatisfactory, and more than the usual renewals are sought. The warmer weather has not improved the roads, and for a few weeks collections and trade will be restricted. Quebec shows no special improvement, orders coming in but slowly, while collections are very poor. Shoe manufacturers are fairly active.

Halifax, March 20.—Business in all lines is dull, and remittances from the country are hardly up to expectations. Reports from St. John, N. B., indicate a fair movement in cured fish, but no change in prices. The lumber market continues satisfactory, and shipments to the United States are on the increase. The outlook for the Newfoundland sealing fleet is considered favorable.

Dry Goods.

[Special to BRADSTREET'S.]

Trade continues generally slow and unsatisfactory. Cotton fabrics are generally in a depressed position, with the market oversupplied. The drive in ginghams at a low price will probably be followed by other accounts, as an auction appears to be the only way to get rid of them. Other classes of cotton fabrics are also badly situated through surplus of goods, and until this is out of the way it will be difficult to bring about improvement. The trade has run on a number of fancy specialties this season, and these have done well. Printed fabrics are generally dull outside of some specialties, and the same can be said of ginghams. Dress woolens are quiet, with agents finishing up deliveries of spring goods and preparing to show fall samples very soon. Foreign operators are showing fall samples, and are booking good orders. Men's-wear woolens are dull, the poor condition of the clothing trade through large stocks carried over being a depressing feature.

Wool.

[Special to BRADSTREET'S.]

The market continues dull, with transactions confined to very small purchases as a whole. London sales show a firmer tone and the full advance is sustained, but this only helps the market on this side through sympathy. One parcel of 10,000 pounds fine territory wool has been sold to go to England, and it is reported that foreign buyers have bid on another line of 400,000 pounds. It is hoped that these wools will get introduced abroad, and so help to keep prices here and there closer together. Bids on foreign wools on this side for shipment abroad have been made on numbers of large lines, but as yet without result. The dull demand from manufacturers on this side keeps quotations for wool mostly nominal, but holders are not disposed to slaughter their holdings yet, and ask about old prices. Territory wools are particularly dull.

AMERICAN PINEAPPLES.

The *Garden and Forest* says: "While most of the pineapples sold in the United States have, within recent years, come from Cuba, the cultivation of this fruit in Florida has rapidly increased, and last season 50,000 crates were shipped from sections in that state other than the Keys. The output from the central and northern part of the state this year is estimated at 35,000 crates, while, but for the damage to new plantations by freezing a year ago, a crop amounting to 250,000 crates was counted upon for the next few months.

"The Bahamas formerly furnished the main supply, which was carried in small sailing vessels taking four to five days to reach this port, while unfavorable winds made a voyage of twenty days not unusual. Most of the pineapples now coming from Nassau and other ports of this group are consigned to Baltimore, where they are canned. As many as 5,500,000 of these pineapples have reached that city within the past four years, and large quantities are canned on the island. Nearly all the Cuban pineapples come to New York, 200,000 barrels and more constituting the imports for a year. These pineapples are all grown near Havana, and shipments continue throughout the entire year. The season begins, however, in the middle of March, and continues at its height for four months, while the Bahama season is a month later in opening. Some of the choicest pineapples have in recent years come from the Indian river section of Florida, and exceptionally large and high-grade fruit comes from Porto Rico. The comparatively small supplies from Jamaica include some excellent varieties which are in special demand.

"The delay of a day in the transportation of this perishable fruit may mean a heavy loss, and twenty-four hours of warm, damp weather may injure a cargo to the extent of 50 per cent. of its original value. No vessels specially fitted for carrying pineapples are yet in service, and this tender fruit is closely packed in steamers carrying sugar and other heating articles. Quick transportation in steamers equipped with improved ventilation and the best storage facilities, as are already in regular use in the banana trade, would open up new possibilities for this department of the fruit trade. At this time, when, besides the shortage caused by the loss in Florida, the trade in Cuba is affected by war, prices have been high. The grade known to wholesale merchants as Havana XX, thirty-five pineapples being required to fill a barrel, now commands $9 a barrel, and this is also the importers' price to wholesale buyers for barrels holding forty-five and ninety of the fruits."

CONSUMPTION OF ALCOHOL.

The London *Times* says: "In connection with the liquor question, appeal is often made to statistics of consumption, but the public should pay no attention to such statistics relating to isolated years. Another source of error lies in the unknown equation of illicit trade. All that can be said is that it tells heavily against the present as compared with the past, for in modern times the smuggling of alcohol has been practically stamped out. In 1820 'more than half the spirits actually consumed were supplied by the smuggler' (Inland Revenue Report), and many years later, in spite of a reduced duty, secret stills remained sufficiently numerous to furnish a crop of nearly 10,000 detections in the year. Something, however, may be learned from the statistics of consumption if fairly treated and carried over a sufficient number of years. The following table, deduced from various official returns, shows the average annual consumption per head of the population for each class of alcohol in periods of ten years, since 1830 in the case of wines and spirits, and since 1860 in the case of beer:

Period.	*Spirits.*	*Wine.*	*Beer.*
1831–40	1.113	.260	....
1841–50	.945	.231	....
1851–60	1.018	.233	....
1861–70	.941	.420	27.53
1871–80	1.190	.512	31.55
1881–90	.988	.388	27.77
Mean annual consumption for whole period	1.049	.340	28.95

"The table shows no progressive movement, but a seesaw, and the chief factor in producing the up-and-down movement is the pecuniary one. Next to the seesaw movement, the most striking fact brought out is the remarkable rise in wine after 1860, partly due to the fall in spirits, but still more to the Grocers' Licenses act of 1860. Moreover, the lighter wines have displaced the heavier kinds. Beer drinking has undergone a similar change of taste in favor of the less intoxicating varieties. This relative preference for the less over the more deleterious form of liquor, coupled with the aforementioned taste for the lighter kinds of beer and wine, seems to corroborate other evidence pointing to a gradual change from excessive to more moderate drinking habits."

DIVIDENDS.

THE AMERICAN SUGAR REFINING CO.

NEW YORK, March 9, 1896.

The Board of Directors of the American Sugar Refining Company have this day declared the following dividends payable April 2, 1896:

On that portion of the Preferred Stock which is entitled to quarterly dividends 1¾ per cent.

On the Common stock a dividend of 3 per cent.

The transfer books will close on March 16 at three o'clock P. M., and be reopened on April 3.

JNO. E. SEARLES, Treasurer.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

To Bondholders of the Northern Pacific Railroad Company and Holders of Mercantile Trust Company Certificates of Deposit, under the agreement of February 19, 1894.

Under and in conformity with the powers and provisions of the Bondholders' Agreement above mentioned, we hereby give notice that this Reorganization Committee has prepared and adopted a Plan and Agreement for the reorganization of the affairs of the Northern Pacific Railroad Company, and has duly lodged the same at New York City in the office of this Reorganization Committee, and with The Farmers' Loan and Trust Company and the Mercantile Trust Company; and at Berlin and London with the Deutsche Bank.

At each of said places also will be found printed copies of said Plan and Agreement for distribution to Bondholders and Certificate holders.

Dated NEW YORK, March 16th, 1896.

TO THE

Bondholders and Stockholders

OF THE

Northern Pacific Railroad Co.

AND OF

Trust Company Receipts Therefor.

NEW YORK, PHILADELPHIA AND BERLIN, March 16, 1896.

Pursuant to the announcement of the Committees, of which Mr. Edward D. Adams and Mr. Brayton Ives, respectively, are Chairmen, a plan has been prepared for an independent reorganization of the Northern Pacific Railroad System on a basis of fair treatment to all classes of security-holders and of fixed charges on the reorganized property reduced to an amount believed to be well within its demonstrated earning capacity. This plan has been prepared by the Reorganization Committee, with our joint approval and coöperation, and, in conformity with an arrangement with the Committees, we have undertaken to act in carrying it into effect.

The plan also has received the approval of the representatives of a majority of the mortgage bonds now in course of foreclosure, and upon which the reorganization is based.

To carry out the plan the following securities will be created:

First.—PRIOR LIEN ONE HUNDRED YEAR FOUR PER CT. GOLD BONDS FOR $130,000,000.

These bonds are to be secured by a mortgage upon the main line, branches, terminals, land grant, equipment, and other property, embraced in the reorganization as carried out, and also all other property thereafter acquired by the use of any of the bonds to be issued under this mortgage, or the General Mortgage hereinafter mentioned.

The proceeds of the lands applicable to these bonds after the retirement of the General First Mortgage Bonds (as provided further on) will be applied, one-half, but not in any one year exceeding $500,000, to the purchase of the Prior Lien 4 Per Cent. Bonds at not exceeding 110 per cent., and their cancellation; and the remainder, under carefully guarded restrictions, will be used for betterments and additions to the property pledged as security for the bonds.

Whenever these bonds cannot be purchased at the maximum price, the unapplied land proceeds for that year will be used to purchase the General Lien 3 Per Cent. Bonds at not exceeding 100 per cent., and their cancellation.

Second.—GENERAL LIEN 150-YEAR THREE PER CENT. GOLD BONDS, limited in amount to $60,000,000, in addition to a reserve for the 100-year four per cent. Prior Lien Mortgage of $130,000,000.

These bonds are to be secured by a mortgage second in lien to the Prior Lien Mortgage and covering the same property.

Third.—PREFERRED STOCK, FOUR PER CENT. NON-CUMULATIVE, limited in amount, under the Plan, to not exceeding $75,000,000, which amount can be increased only with the consent of Preferred and Common Stockholders, as provided in the plan. All the Preferred Stock will be registered and transferable, at the option of the holder, either in New York or at the Deutsche Bank, Berlin. Dividends upon stock registered in Berlin may be collected there at the rate of 4.20 marks per dollar.

Each share of this preferred stock will be entitled to non-cumulative preferential dividends out of surplus net earnings to the extent of four per cent. per annum without deduction for any United States, State or Municipal taxes which the Railroad Company may at any time be required to pay or retain therefrom. In any fiscal year in which 4 per cent. dividends shall have been declared on both Common and Preferred Stock, all shares, whether preferred or common, shall participate equally in any further dividends for such year.

After the termination of the Voting Trust hereinafter provided for, the Preferred Stock will have the right to elect a majority of the Board of Directors of the new Company whenever, for two successive quarterly periods, the full and regular quarterly dividends, at the rate of four per cent. per annum, are not paid in cash.

The right will be reserved to the new Company to retire this stock, in whole or in part, at par, from time to time, upon any first day of January during the next twenty years.

Fourth.—COMMON STOCK to the amount of not exceeding $80,000,000.

In furtherance of the independent reorganization and the administration of the property and its securities, both classes of stock of the new company (except such shares as may be disposed of to qualify directors) are to be vested in the following five Voting Trustees, viz.: J. Pierpont Morgan, Georg Siemens, August Belmont, Johnston Livingston, and Charles Lanier, for five years, although, in their discretion, the Voting Trustees may deliver the stock at any earlier date. In the meanwhile the Voting Trustees are to deliver their certificates in usual form.

The PRIOR LIEN bonds are to be appropriated approximately as follows:

To retire an equal amount of General First Mortgage Bonds	$41,879,000
To provide for the conversion and, so far as necessary, for the Sinking Fund of the General First Mortgage Bonds (any amount not so used to be added to the reserve for new construction, etc.)	14,657,650
For the payment of Receivers' Certificates and Equipment Trust, and for the conversion of the Collateral Trust Notes and the General Second Mortgage Bonds	40,040,350
Total present issue under the Plan, estimated at	$96,577,000
Reserve to provide at their maturity for an equal amount of Bonds of the St. Paul & Northern Pacific Railroad Company	8,423,000
Estimated amount to be reserved for new construction, betterments, equipment, etc., under carefully guarded restrictions in the mortgage, and to the extent of not exceeding $1,500,000 per annum	25,000,000
Total authorized issue	$130,000,000

The GENERAL LIEN bonds are to be appropriated approximately as follows:

For the conversion of the General Third Mortgage Bonds, Dividend Certificates, and the Consolidated Mortgage and Branch Line Bonds under the Plan	$56,000,000
Estimated amount to be reserved under carefully guarded restrictions in the mortgage for new construction, betterments, equipment, etc	4,000,000
Total issue in excess of Prior Lien Bonds estimated at	$60,000,000
Reserved to provide for the Prior Lien Bonds at their maturity in 100 years	130,000,000
Maximum amount of both Mortgages	$190,000,000

The PREFERRED STOCK is to be appropriated approximately as follows:

For conversion and adjustment of various Main Line and Branch Line Mortgage Bonds and the defaulted interest thereon, and other purposes, as provided in the Plan	$72,500,000
Estimated amount which may be used for reorganization purposes or may be available as a Treasury asset of the new Company	$2,500,000
	$75,000,000

The COMMON STOCK is to be appropriated approximately as follows:

For purposes of the reorganization, as provided in the Plan	$77,500,000
Estimated amount which may be used for reorganization purposes or may be available as a Treasury asset of the new Company	2,500,000
	$80,000,000

FINANCIAL.

The basis of exchange of existing bonds and of sale of new stock is as follows:

	RECEIVE:				
	Cash.	*New Prior Lien Mortgage Bonds.*	*New General Lien Mortgage Bonds.*	*Preferred Stock Trust Certificates.*	*Common Stock Trust Certificates.*
General First Mortgage Bonds.....	*3 per ct.	135 per ct.	....	....	....
General Second Mortgage Bonds ...	†4 per ct.	118½ per ct.	....	50 per ct.	....
General Third Mortgage Bonds	†3 per ct.	....	118½ per ct.	50 per ct.	....
Dividend Certificates	†3 per ct.	....	118 per ct.	50 per ct.	....
Consolidated Mortgage Bonds	†1½ per ct.	....	66½ per ct.	62½ per ct.	....
Collateral Trust Notes	‡7 per ct.	100 per ct.	....	20 per ct.	....
Northwest Equipment Stock	**100 per ct.	....	....	....	....
Depositors of Preferred Stock—for payment of a sum equal to $10 per share	....	....	....	50 per ct.	50 per ct.
Depositors of Common Stock—for payment of a sum equal to $15 per share	....	....	....	....	100 per ct.

* Payable April 1, 1896. This represents the coupon due July 1, 1896.
† Payable 60 days after the plan shall have been declared operative.
‡ Payable 3 per cent. on May 1, 1896; 4 per cent. on January 1, 1897.
** Payable at any time, in the discretion of the Managers, on or before completion of reorganization, with interest at 6 per cent. per annum from June 1, 1896.

The foregoing percentages as to bonds are based upon the principal amount of deposited securities.

The payments by depositors of Preferred and Common Stock must be made in not less than three instalments, at least 30 days apart, when, and as called for by advertisement, as more fully provided in the plan.

The new bonds will be in coupon form for $500 and $1,000 each, with right of conversion into registered bonds of $1,000 and $10,000. Interest on new Prior Lien Bonds issued for present General First Mortgage Bonds will start from July 1, 1896, and will be paid quarterly, as provided in the plan. Interest on all other bonds (whether Prior Lien or General Lien) will start from January 1, 1897, payable on or before completion of the reorganization.

Equitable cash settlements will be made for fractional amounts of new bonds and stocks accruing to depositors.

With reference to the present GENERAL FIRST MORTGAGE BONDS, it may be explained that *it is not sought in any way to enforce a conversion*, and the offer to them is made solely upon the belief that, on the terms proposed, such conversion, while advantageous to the Company, is also manifestly to the advantage of bondholders so converting.

The present General First Mortgage Bonds mature in 1921, but are redeemable by compulsory drawings at any time at 110 per cent. from the proceeds of land sales or the fixed annual contribution by the Company to the Sinking Fund.

These compulsory redemptions in the past have been a disturbing factor in all calculations for investment purposes, and the inauguration of a new and vigorous policy for the sale of the lands may be expected from this time forward greatly to increase the amount of such redemptions.

In some years these redemptions have required large contributions from the Operating Department, even to the extent of the entire annual Sinking Fund, a sum which would provide for the annual interest on about $19,000,000 of Prior Lien Bonds as now proposed. It is manifestly to the benefit of holders of General First Mortgage Bonds to obtain an investment of longer continuance, and it is also to the benefit of all subsequent securities to diminish this unnecessarily large burden of annual fixed charge.

A conversion on the basis indicated in the preceding table will relieve the holders of General First Mortgage Bonds from these calls for redemption, which prevent their bonds from reaching the high price they would otherwise command, and also will relieve the Company from the burden of the Sinking Fund requirements, and also permit the use of a portion of the proceeds of land sales for the benefit of the property.

The General First Mortgage Bonds now outstanding are at the rate of about $20,466 per mile. The proposed Prior Lien Bonds, including those reserved for the St. Paul and Northern Pacific Bonds, will amount to about $22,310 per mile, and will cover all the Equipment and the Branches and Terminals as proposed under the Plan.

The annual fixed charges for interest and sinking funds on the present General First and Divisional Mortgage Bonds are at the rate of $1,618 per mile, while it is estimated that on the Prior Lien Bonds they will amount to only $935 per mile.

A SYNDICATE OF $45,000,000 HAS BEEN FORMED TO PROVIDE THE AMOUNTS OF CASH ESTIMATED AS NECESSARY TO CARRY OUT THE TERMS OF THE PLAN OF REORGANIZATION, TO FURNISH THE NEW COMPANY WITH CASH WORKING CAPITAL AND WITH A SUM ESTIMATED AT $5,000,000 FOR EARLY USE IN BETTERMENT AND ENLARGEMENT OF ITS PROPERTY.

The adjusted net earnings of the Northern Pacific System for the past five years show an average surplus over the fixed charges under the plan of reorganization of about $1,800,000 per annum, a sum sufficient to pay an annual dividend of about 2½ per cent. on the new Preferred Stock.

FINANCIAL.

Included in this period were the last two fiscal years, when, owing to a combination of unfavorable circumstances, earnings fell to abnormally low figures, thus greatly reducing the average. Even for the present year, notwithstanding the great disadvantages under which the system is operated, the earnings promise to amount to a sum which would pay 2 to 3 per cent. dividend on the new Preferred Stock when the property shall have been relieved from its present legal entanglements and excessive financial burdens. It is believed, as it seems to us with good reason, that in the future these earnings can be greatly increased.

All holders of bonds and stock affected by the plan may now deposit their securities with either of us at our offices, receiving therefor negotiable receipts, exchangeable at any time for reorganization certificates.

Securities not deposited as above will not be entitled to participate in the benefits of the reorganization.

Holders of receipts of the Mercantile Trust Company of New York for Bonds deposited under the existing Bondholders' Agreement of February 19, 1894, are invited, with the least possible delay, to signify their approval of this plan by producing their existing receipts at one of our offices, in order that we may stamp such approval thereon. Under the terms of the plan, the Managers have the right, which at any time hereafter, in their discretion, they may exercise, to exclude from the plan any holders of such receipts who shall not conform to the request to present their receipts for stamping, as expressly assenting to the plan.

Copies of the agreement and plan of reorganization are now ready for distribution, and all security-holders are invited to obtain them from us, as all depositors are bound thereby, without regard to this circular. They set forth in detail many features which it is impracticable to condense into this circular, but which are of much importance to security-holders.

We believe that the proper consummation of the plan will result to the best interests of all security-holders, and will place this vast property on a sound and conservative basis.

Any further information connected with the reorganization, which may be desired by security-holders, will be furnished on application at any of our offices.

TO THE HOLDERS OF

Northern Pacific Railroad Co.

COLLATERAL TRUST NOTES.

The undersigned Committee under the Collateral Trust Indenture of the Northern Pacific Railroad Company, dated May 1st, 1893, have received from the Reorganization Committee of the Northern Pacific Railroad Company their Plan of Reorganization, dated the 16th instant, in which it is proposed that you shall deposit your Notes at one of the three Depositaries designated in said Plan, and receive therefor under the Reorganization Plan 3 per cent. in cash May 1, 1896, and 4 per cent. in cash January 1, 1897; 100 per cent. in Prior Lien 4 per cent. Bonds; 20 per cent. in Preferred Stock Trust Certificates.

Your undersigned Committee are of the opinion that it is desirable to accept the said proposition and join in the Reorganization as proposed.

NEW YORK, March 19, 1896.

To the Second Mortgage Bondholders
OF THE
Northern Pacific Railroad Co.

The Committee heretofore appointed by the Second Mortgage Bondholders to care for and protect the interests of the Second Mortgage Bonds of the Northern Pacific Railroad Company, take pleasure in stating that the plan proposed and endorsed by Messrs. J. P. Morgan & Co. has, after examination, received their approval, and they heartily recommend its acceptance to all Second Mortgage Bondholders.

By such plan each Bondholder is to receive for each $1,000 Second Mortgage Bond held by him:

$40 in cash within sixty days after the plan has been declared operative;

$1,185 in prior lien Four per cent. Bonds:

$500 in preferred stock trust certificates.

Messrs. J. P. Morgan & Company, the managers named in said plan, have agreed that Second Mortgage Bondholders holding the New York Security and Trust Company's certificates under this Committee's agreement may present their certificates direct to Messrs. J. P. Morgan & Company, receiving therefor suitable receipts under the reorganization plan without any charge whatsoever to the Bondholders.

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

Berlin Office, 23 Charlotten Strasse.
London Office, 137 Cheapside, E. C.
Melbourne Office, 231 Flinders Lane.
Paris Office, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MARCH 28, 1896.

Congress has apparently followed up to the present the policy outlined early in the winter by Speaker Reed of giving the country a period of rest instead of exercise, or, in other words, of passing as little substantive legislation as possible. The activity of Congress has up to the present been largely resultless where it has not been disturbing, and it is not strange that some members of Congress feel that it would be as well to terminate the session early, particularly in view of the fact that a presidential campaign is approaching. A resolution has already been introduced by Senator Platt, of Connecticut, proposing a final adjournment on May 2. A resolution of this kind usually comes from the House, whose Committee on Ways and Means is the authority to determine when the needs of the government are supplied, but the proposition will not fail of consideration because of the fact that it has been first broached in the Senate.

Declarations on the currency question in the platforms of recent state conventions display some degree of diversity, indicating that the framing of currency planks by the national conventions of the two great parties will give the managers matter for anxious thought. Attention has naturally been attracted by the declarations of the Republican conventions in Ohio and New York, for the reason that those states have prominent candidates for the presidency. The Ohio platform declares in favor of bimetallism, and demands "the use of both gold and silver as standard money, either in accordance with a ratio to be fixed by an international agreement, if that can be obtained, or under such restrictions and such provisions to be determined by legislation as will secure the maintenance of the parities of value of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold or paper, shall be at all times equal." The New York platform, on the other hand, recognizes in the movement for the free coinage of silver an attempt to degrade the long-established standard of our monetary system, and declares that until there is a prospect of international agreement, and "while gold remains the standard of the United States and of the civilized world, the Republican party of New York declares itself in favor of firm and honorable maintenance of that standard."

In Minnesota the convention declined to adopt the Ohio platform, declaring in favor of "the use of both gold and silver to the extent to which they can be maintained and circulated at a parity in purchasing and debt-paying powers," and earnestly opposing the free and unlimited coinage of silver under present conditions, "for the manifest reason that it would destroy such parity, enormously contract the volume of our currency by forcing gold out of circulation, and immediately place us on a silver basis." The idea of an international agreement apparently found favor with all of the conventions mentioned. The declarations of the state platforms of the Democrats will not be made for some time in the more important states; the New York convention, for example, will not meet until June.

A greater New York seems now within the range of speedy realization. The Senate of New York state declared in favor of consolidating the municipalities a couple of weeks ago, and the Assembly passed the bill having that end in view on Thursday. In neither house did the vote follow party lines. The bill now goes to the mayors of the cities affected by its provisions, after which it will be sent to the governor if no disapproval is expressed by those officials. If, however, they should disapprove of the provisions of the bill it will have to be repassed by the legislature before going to the governor for his signature. It is probable that the opposition to the bill has already displayed its greatest strength, and people generally regard its enactment as a foregone conclusion. The idea is one which has been many years before the people, and its working out in practice will attract the attention of students of municipal affairs everywhere.

The good roads movement is making steady progress in estimation at Washington, a circumstance which appears to be in large part owing to the thoroughness of organization shown by it. Reference has already been made to the House bill providing for the creation of a special commission on highways, whose purpose is to inquire generally how the government may further promote the improvement of highways, and the best method of securing a scientific location of highways on the public domain, the employment of the Geological Survey in the discovery of road materials and the free testing of these, and the construction of modern roads and instruction in road-making at agricultural colleges and experiment stations. It appears that letters and telegrams have poured in from every part of the country indorsing the bill and urging its enactment by Congress. It is understood that an effort will even be made to secure the adoption of planks in the party platforms advocating road improvement. As usual, the associations of wheelmen are active agents in promoting the progress of the good roads movement.

Labor and agriculture are already represented in executive departments, but some congressmen are apparently of the opinion that something more might be done in the interest of both than has thus far been accomplished. A bill was reported this week from the Senate Committee on Education and Labor which authorizes the appointment of a non-partisan commission on labor, agriculture and capital. The bill provides that the commission shall consist of five members in the interest of labor, to be designated one from each of five labor organizations; five in the interest of agriculture, three of whom shall be designated by the Farmers' Alliance and two by the National Grange, and five in the interest of capital, to be selected from among manufacturers and those representing other business pursuits. This appears to be a measure of a kind that could with propriety be postponed in favor of more pressing subjects of legislative consideration.

An agreement has been reached by the conference committees of the House and Senate in regard to the resolutions touching the recognition of the Cuban insurgents as belligerents. As is well known, the resolutions proposed in the two houses, while both declaring for a recognition of belligerency, differed as to the extent to which the declaration should go. The House Committee has now agreed to accept the Senate resolutions, which declare that in the opinion of Congress a condition of public war exists between the government of Spain and the government proclaimed and for some time maintained by force of arms by the people of Cuba; that the United States of America should maintain a strict neutrality between the contending powers, according to each all the rights of belligerents in the ports and territory of the United States, and that the friendly offices of the United States should be offered by the President to the Spanish government for the recognition of the independence of Cuba. The advocates of the resolutions look for their early passage by both houses.

Alaska, which has long been pressing in vain for legislative consideration, may profit by the attention at present being given to its wants. The House Committee on Public Lands has this week reported favorably some measures aiming to benefit the territory. One of these bills repeals the law which makes the United States Commissioner and clerk of the United States court at Sitka ex-officio register and receiver, respectively, of public lands for the Alaska district. The effect of this will be to permit the President to appoint regular officials for those offices, whose services are demanded by reason of the rapid development of the mining interests of the territory. Other bills favorably reported creates the office of surveyor-general in Alaska, and permit owners of mining claims on forest reservations to perfect their titles and procure patents.

For some time past the House Committee on Patents has been carrying on an investigation into the operation of the copyright laws, and it is expected that a revision of the copyright system, more or less comprehensive, will result. It is understood that one of the principal changes in contemplation will be the establishment of a Bureau of Copyright in connection with the Congressional Library, which now has charge of all the copyright business, but which has not a sufficiently large clerical force to properly handle this work. It is intended to submit the bill to all the copyright leagues and other organizations which have a legitimate interest in the subject and elicit their opinions. All this will take some time, and possibly additional hearings may be rendered necessary, and it seems unlikely that the legislation proposed can reach the stage of enactment during the time that will elapse before the close of the session.

From statistics furnished by the National Commissioner of Railroads to the Secretary of the Interior the cost of construction of the Union Pacific is shown to have averaged $50,000 a mile; of the Central branch, $27,313; that of the Sioux City & Pacific, $43,000, and that of the Kansas Pacific, $53,767. The mortgage debt of the Union Pacific, exclusive of the government lien, is $82,782,885. The land grant to these four roads amounted to 18,841,000 acres, of which 12,000,000 was to the Union Pacific and 6,000,000 to the Kansas Pacific. According to the report, as early as 1881 the officials of the roads refused to reveal to the government officials the amount of stock held by individual stockholders, and this information never has been in the possession of the commissioner. The commissioner is also ignorant as to where the bonds of the companies are held.

THE CENTRAL VERMONT RECEIVERSHIP.

The application to the courts for a judicial custody of the Central Vermont Railroad property was one of the events of the week in railroad circles. Apart, however, from its effect on the Boston stock market, where a considerable amount of the securities of the road and of its leased and affiliated lines are held, the matter has received little attention. Considering the condition of the corporation, the proceedings now instituted are not an unnatural outcome, though it must be owned their announcement was in the nature of a surprise, as it had been concluded that the Grand Trunk of Canada, which virtually controlled the Central Vermont, would continue to support the latter for the sake of the connection which it afforded with the railroad system of New England, and particularly for the advantage it gave as an avenue for Boston traffic.

The new management of the Grand Trunk has, however, apparently taken a different view. The suit in which the receivers have just been appointed was brought by the Grand Trunk, which has been carrying the Vermont Central's accounts for a long time and is its creditor in a large amount. The receivers appointed are Mr. E. C. Smith, the president of the Central Vermont, and Mr. Charles M. Hays, recently chosen general manager of the Grand Trunk.

This proceeding, next to the receivership of the Baltimore & Ohio, is the most important railroad bankruptcy since January 1 of the current year. It involves nearly 800 miles of lines, the system of the company extending the length up the New England states from Ogdensburg, N. Y., to the waters of Long Island sound at New London, Conn. Of course such leased lines as the Ogdensburg & Lake Champlain, the New London Northern and the Rutland railroads are not directly affected, except so far as a possible reorganization may involve some changes in their leasehold relations to the parent company.

On this and other points connected with the future of the system there is great uncertainty. It is intimated that the matter has been long and earnestly discussed by the new Grand Trunk management. Nevertheless, the final blow was apparently struck in secret. The officials of the Central Vermont professed complete ignorance of the proceedings until they were an accomplished fact. This reticence may, however, have been of an assumed nature. At the same time the capitalization involved is sufficiently large to make the outcome a matter of more than ordinary interest. There are $7,000,000 of 5 per cent. consolidated mortgage bonds outstanding issued by the Consolidated Railroad Company of Vermont, the company which the present corporation succeeded in 1892. The existing organization has also created a mortgage covering $15,000,000 4 per cent. bonds, of which $7,000,000 were reserved to retire the 5 per cents, and the balance, of which an unknown amount are held by the Grand Trunk to secure its advances, to be used for the liquidation of floating debt, improvements, etc. It is significant that the price of the 5 per cent. bonds in the Boston market has suffered a very serious decline in price, with indefinite rumors as to the outcome, varying from a probable reorganization with a scaling down of interest charges under guarantee of the new obligations by the Grand Trunk, to the virtual abandonment by the latter of the whole system as a useless and expensive burden. It is scarcely possible that the latter course will be adopted. The Grand Trunk has a very large investment in the Vermont road, and in any event could retain its control of the latter even if it withdrew from the position of a financial backer. It is, of course, possible that some of the branch lines now under ban would be allowed to go out of the system, and, in this connection, the fate of the New London Northern and Rutland roads is a matter of some curiosity. The latter, which is controlled by the Delaware & Hudson, would naturally revert to its owners, but the New London Northern might be the object of a scramble among the other large systems of New England, as its possession would be advantageous alike to the New Haven, the Boston & Albany and the Boston & Maine companies.

SOMETHING ABOUT COTTONSEED.

So much has been written and printed about the utilization of waste products in industrial operations, and particularly so with reference to cottonseed and its products, that it might be thought nothing remained to be said regarding this branch of a great industry. Lest this view be accepted unhesitatingly, it is worth mentioning that the United States Department of Agriculture has thought it advisable to issue a Special Farmers' Bulletin to tell what it knows about cottonseed and its products. While much that is in this bulletin has been published before, there are, however, one or two features of the cottonseed business which have not been presented to those not immediately connected with it, and to some of these the bulletin will, no doubt, prove an interesting document. While only purporting to be the product of condensation from original articles by members of the office of the department "and others," it is proper to state that much that is contained therein had already appeared in an interesting summary of a great southern industry published in the annual report of the American Cotton Oil Company for the year 1893. It is, of course, unnecessary to call attention to the comparatively modern growth of the cottonseed industry. It is true that as far back as 1783 oil was extracted from cottonseed in London, and as early as 1826 an oil mill was started in Columbia, S. C. In 1860, however, there were only seven establishments for the manufacture of cottonseed oil in the United States. This number had been increased to forty-five by the year 1880, but it was not until after the latter date that the industry began to assume anything like its present large proportions. To-day cotton stands preëminent among crops in the ease and cheapness of production as compared with the value and variety of its products. This position is one of comparatively late growth. Originally valued solely for its lint, to-day nearly every portion of the plant and its by-products are found useful. From the roots a certain drug is produced. The stems and leaves have a value as fodder, and the stems alone have been utilized with some success for fiber and fuel.

Next in importance to the lint is the seed, which furnishes a great variety of valuable products, the application of which seems capable of almost indefinite extension. Cottonseed oil is the main product of the seed. The larger portion of the oil manufactured in this country is used in the preparation of food products, particularly lard, salad and cooking oils and their substitutes. From it, also, soap of several kinds is made, as are also washing powder, cosmetics, and, to some extent, oil for illuminating purposes. It is said to be unexcelled as a lubricant for some kinds of machinery. The fact that it is not strictly a drying oil renders it unfit for use in paints. The refuse of refined oil makes valuable "stock" for the manufacture of soaps. The residue, after the removal of the oil, is a valuable fertilizer and food for stock. The hulls, in conjunction with the cake, make a valuable cattle food, and alone are capable of being used as fuel, while their ash is rich in potash and phosphoric acid. Dyestuffs, which have been used to some extent, have also been made from the seed.

The popular theory that cotton is a soil-exhausting crop is, according to this bulletin, a misconception. It is evident that if the lint were the only part of the plant removed from the soil, cotton would be the least exhausting of farm crops, because the lint alone is poor in fertilizing constituents, containing very little nitrogen, potash or phosphoric acid. The oil, too, contains comparatively small amounts of these. It is apparently shown that even when the seed is taken away along with the lint cotton still removes smaller amounts of fertilizing materials from the soil than do either oats or corn. The yield of lint to cottonseed is generally in the proportion of one to two—that is, taking 1,500 pounds of lint cotton the seed weighs two-thirds of the whole. The yield of 2,000 pounds of ordinary ginned cottonseed, as summarized in this bulletin, is about as follows: Lint, short staple, 20 pounds; cottonseed hulls, 891 pounds; kernels, 1,089 pounds. From these kernels may be extracted 289 pounds of crude oil, leaving a residue of 800 pounds of cake.

Improvements in manufacture have made it possible to realize as much as 300 pounds (45 gallons) of oil from a ton of seed. The use of whole cottonseed as a feed has been practically abandoned in the vicinity of oil mills, because the lint in the seed and the dust it collects are likely to be injurious, while it is not easy to mix the seed thoroughly with other coarse feed, and the seed itself is disposed of to better advantage at the oil mills. Experience has also shown that the use of the whole seed as a fertilizer is no longer desirable in the vicinity of the oil mills, as it can be better disposed of by exchanging for cash or for meal. The fact, however, that only about 33 per cent. of the 1893–94 crop was used in the manufacture of seed shows there is still room for growth in this direction, limited only by the cost of transportation of the crude seed to the mill. Briefly summarized, the utilization of cottonseed consists first in eliminating the short lint which clings to the seed after the ginning process; next, in breaking and separating the hulls from the kernels, then in heating the ground kernels or meal in order to expand the oil contained, and, lastly, pressing the oil out of the ground meal. The grinding of the separated hulls, to be afterwards mixed with the meal as a foodstuff, is a secondary process of utilization. The value of the products of the cottonseed industry, which in 1860 was $741,000, is estimated to have increased by 1894 to $30,000,000. Although one-third of the crop now reaches the mills, cottonseed oil is produced in larger quantities than any other vegetable oil. American seed yields a clearer oil than the Egyptian or Indian seed, and upland seed produces a clearer oil than does the Sea Island seed. The color of the oil yielded by expression is that of a dark brownish-green. After being treated with an alkaline solution, a clear yellow color is produced. The refined oil boils at about 600 degrees Fahr., and congeals at 50 degrees for summer and 32 degrees for winter pressed oil.

Cottonseed meal exceeds corn meal in value as an animal food to the extent of 62 per cent., wheat 67 per cent., and raw cottonseed 26 per cent. As regards digestibility, it compares very favorably with other concentrated foodstuffs. As a fertilizer, the meal is worth $20 to $25 per ton, based on the value of other commercial fertilizers. The value of the meal for producing meat, milk and butter is well established. It is one of the cheapest of the highly nitrogenous foodstuffs. It is very concentrated, and should be fed in comparatively small quantities in connection with a large proportion of coarse food. The hulls contain a large excess of non-nitrogenous matter, just what the meal lacks, and the feeding of the two together has produced satisfactory results. The proportions vary, but the most common ration is said to be four pounds of hulls to one of meal in fattening cattle for market. A large proportion of the hulls have been, and are, used for fuel in the engines at the mills. Their value for fuel is estimated at 80c. to 90c. a ton, where good pine wood is to be had at $2 a cord, or coal at $3.50 a ton. In other words, a cord of wood is equal in heating power to two and one-half tons of hulls, and a ton of coal to four and one-third tons of hulls.

In view of the increased respect in which the cottonseed and its by-products are now held, it is not surprising that some predictions are made that in the future cotton will be grown, in some sections, for the sake of the seed, and reports have been received of actual experiment in that direction. Some planters are said to have cultivated a species known as "baldheaded cotton," one bearing practically no lint and yielding seed only. Whatever may be the results of these experiments, however, one conclusion apparently to be drawn from the increasing utilization of the seed is that the former despised waste product is likely to occupy a far more prominent position in the future than it has in the past, outside of the domain of oil-making merely.

THE MONEY MARKET AND ADVANCING EXCHANGE.

While there has been less evidence of pressure in the New York and other loan markets of the country during the past week, conditions in that connection, as well as in foreign exchange, have continued to present features which occasion some anxiety to the stock market. It would seem that the fears of commercial disasters growing out of the poor trade of last winter have in the main been localized in certain lines, where the non-distribution of manufactures had resulted in congestion, and where actual disaster had been feared. The discrimination in regard to commercial paper, of which so much has been heard, is still practically if not entirely confined to lines so affected, and does not extend to business interests in general.

In other respects the developments of the week have been rather in the direction of a less apprehensive feeling and a relaxation of the symptoms of incipient stringency. The speculation in the New York stock market has been at a low stage of activity,

and the demand for money from that source has, of course, decreased correspondingly. The banks have complied with the Treasury's call for 20 per cent., the amount of the special deposit of $20,000,000 of the proceeds of the recent bond sale. It is not thought that any further call will be made for some time, unless, indeed, the decline in interest rates should become sufficiently marked to afford encouragement to gold-shipping operations. Another circumstance of some importance is that the policy of the banks in calling in loans and restricting their transactions has already increased their resources beyond their needs, and, as a consequence, institutions which last week were inclined to restrict their lines have this week loaned money on call to secure employment for it.

The feature of the financial situation which excites the most attention is the renewed rise in foreign exchange rates. Last week the figures for actual transactions in demand sterling bills were 4.87½. At the close of the present week the market has been firm at 4.88½, and though the inquiry from importers and other remitters is described as small and slow, the absence of any supply of commercial and security bills is painfully felt. The indications which the market affords are almost positive that the advance will continue. Some stress is indeed laid upon the departure of Mr. J. P. Morgan for Europe, it being rumored that that gentleman has several important railroad bond negotiations in charge, and that the placing of several such blocks in London would put a different face upon the exchange situation. Such expectations, however, seem somewhat remote, and the fact is that the present quotations for exchange are but ½c. in the pound below the gold-export point. Whether under the existing circumstances the calling in of the balance of the Treasury's special deposit of bond proceeds, and the temporary hardening of money rates which it might produce, would check the withdrawal of gold may be doubted. The Treasury has taken action in the premises by raising the premium it requires for paying out gold bars instead of coin, making it 3/16 per cent. instead of ⅛ per cent. This is done with the purpose of meeting the recent advance in the price paid by the Bank of England for gold bars.

THE NEW YORK LIQUOR-TAX LAW.

The Raines Liquor-Tax law, which largely increases the license fees in New York state and substitutes state officials for the local boards of excise, became a law on Monday, when it received the signature of Governor Morton. The governor filed an extended memorandum setting forth his reasons for signing the bill. One ground of opposition to the bill was the contention that it was a "special city bill" within the purview of the constitutional provision, which requires the submission of such bills to the authorities of the cities affected thereby. The governor held that the bill was general within the meaning of the constitution, because it applies to cities in all parts of the state and relates to all the cities of each class. The governor points out that under the bill the amount of tax imposed on the liquor traffic varies in different cities, and the amount of revenue which cities may derive from the liquor traffic also varies, but the ratio of distribution of the liquor tax is uniform. The tax, however, is assessed on the individual, and the city has no interest in it until it is paid to the county treasurer or other proper officer. The lack of uniformity in the provisions of a bill intended to be general does not, the governor says, make it a special city bill within the meaning of the constitution unless it contains provisions relating specifically to a particular city. In fixing the rates of taxation, the legislature might have adopted the classification of cities prescribed by the constitution, but it chose to create an artificial classification, which has had the effect of making a different rate of taxation in cities belonging to the same constitutional class. Such artificial classification, the governor holds, is not objectionable, and does not alone render the bill subject to action by the cities.

Passing to a consideration of the substance of the measure, the governor says that while it is not free from objection in some of its details, he has no hesitation in commending it as a whole. He recognizes that it is a radical departure from the traditional policy of the state, which has heretofore considered the regulation and sale of intoxicating liquors as matters of purely local jurisdiction. The subject has been under the general supervision and control of local officers chosen by the municipalities, except that for a few years, during the early history of the state, the commissioner of excise for the city of New York was appointed by the governor. The new law changes the entire scheme, abolishes all local boards having jurisdiction to issue licenses for the sale of liquor, and places the whole subject under state supervision. Whether this is wise or not, the governor admits, experience can only demonstrate, but he regards it as an experiment worth trying, and believes that if its design is fairly worked out by competent and faithful officers, it will produce a result so beneficial that the people will not be likely to wish to resume the system of local supervision.

One of the objections to the measure is that it is not equal in its application and will not be equal in its results throughout the state, but he says equality and exact application in legislation of this character are scarcely to be expected, for a measure of this importance, which concerns directly or indirectly more than 6,000,000 of people, differing widely in their tastes, education and experience, and in their social and industrial relations, can hardly be supposed to exactly fit every community and every interest, individual or aggregate, which may be affected by it. Another objection urged against the measure is that all of the tax raised by the bill, instead of two-thirds, should be paid into the municipal treasury for local purposes, and that it is purely a matter of local legislation; but the governor suggests that the state has an interest in the enforcement of the law, and has a right to some portion, or even all, of the tax to be imposed on a business authorized by it. If, he says, the number of certificates issued under the law should equal the number of licenses now in force, the revenues of the municipalities in most cases would be very largely increased, because the tax is higher than the rate now generally charged for a license, while if allowance be made for a material reduction in the number of certificates, in consequence of the increase in the rate, this increase is so considerable in most cities that the revenue of the city would probably still be as large as, or even larger, than under the existing conditions.

As might be expected, the question of the constitutionality of the measure will not be allowed to rest with the conclusions of the governor. Arrangements have already been made to put the question in train for decision by the state court of last resort. A preliminary decision has been rendered by a justice of the Supreme Court in a case in which the grounds of objection were urged that the act constituted special legislation and should have been forwarded to the authorities of the cities for their approval; that it appropriated state money without a two-thirds vote of both houses, and that, being a tax law and not a police regulation, it must be uniform in its operation, and that it discriminated against non-residents in violation of constitutional right. The judge decided promptly in favor of the constitutionality of the law. The question will be fully argued on appeal without delay.

RATES ON MANUFACTURES AND ON MATERIALS.

Several points of interest were passed upon by the Interstate Commerce Commission in its decision recently rendered in the case of Page and others against the Delaware, Lackawanna & Western Railroad Company and other roads. In its opinion disposing of this controversy, the commission held that under the Interstate Commerce law it has continuing jurisdiction over the rates and practices of carriers subject to the provisions thereof, and is not precluded from rehearing a particular case and amending or modifying its original order therein by the refusal of a circuit court of the United States to enforce such order against the carriers affected thereby, especially when the reasons assigned for such refusal do not relate to the principal question in controversy and are consistent with an approval of the amended or modified order.

The commission further held that it is authorized and required in appropriate proceedings to determine whether rates or practices of carriers complained of are unlawful, and, if so, to what extent, and to require such carriers by suitable order to desist not only from doing what is unlawful, but from omitting to do what is found to be lawful. Furthermore, the commission ruled that in proceedings before it complaining parties are not bound to include as defendants all carriers maintaining the rates or indulging in the practices complained of, but may proceed against the particular carrier or carriers whose lines are used or required by the complainants, and that such carriers cannot excuse disobedience of a lawful order of the commission on the ground that other carriers, members of an association with them, were not made parties to the proceeding and had failed or refused to take action in conformity with such order.

In passing on the question involved in the case before it the commission reaffirmed the principle that the terms "reasonable and just," "unreasonable or unjust," "undue or unreasonable preference or advantage," "undue or unreasonable prejudice or disadvantage in any respect whatsoever," and "unjust discrimination," as used in the statute, imply comparison, and that rates must bear just relation to each other as well as be reasonable per se. The commission ruled that the elements of bulk, weight, value and character are main considerations in determining approximately what freight articles are so analogous as to entitle them to the same classification. Other considerations, it was held, may also enter into the question, but in this case, where the comparisons made on these bases indicated the propriety of a like class for hollands or shade cloth and window shades made therefrom (the great mass of shades at least), such other matters, the commission said, must be deemed to have only minor weight and importance, and while it was true that the case was somewhat exceptional in the sense that a manufactured article was held entitled to as low classification as was given to one of the constituent materials, there were precedents for such ruling in the classification itself, and if justice was thereby accomplished the fact that they are exceptions to the general practice was not of itself a valid objection.

An order had been issued in the case two years ago requiring the railroads to desist from charging more than third-class rates for the transportation of window shades, but the Circuit Court of the United States for the Northern District of New York declined to enforce the order, on the ground that it applied to shades having a very high value as well as to the cheaper varieties. Upon a rehearing before the commission that body directed that its previous order be vacated and that a new order should be entered containing the same general requirement, but with a proviso permitting the railroads to restrict their transportation of window shades at third-class rates to those limited by a specified maximum valuation at the time of shipment, and to prevent excessive valuation for transportation purposes of the much more expensive grades by such regulations as they might be advised were just and lawful.

AIDING THE INTERSTATE COMMERCE LAW.

It is only a few weeks since Chairman Midgley, of the Western Traffic Association, one of the most prominent officials in the service of the leading railroad combinations, stated in an interview that he sincerely hoped the Supreme Court would decide that railroad men must testify in cases under the Interstate Commerce act, adding that, in his opinion, every fair-minded railroad man would be in favor of this interpretation of the law. It would, in Mr. Midgley's opinion, be a most important factor toward the restoration of rates, as under such a ruling the legal consequences of rate-cutting or other violations of the Interstate Commerce law could no longer be successfully evaded.

There is no reason to doubt that sentiments of this character have long prevailed among the upper ranks of railroad officials. They have, however, been impotent to check the demoralizing practices of their subordinates, or to force the roads whose managers persistently violated agreements to live up to their agreements in regard to the maintenance of rates. There being no way of punishing infractions of the law, the law itself comes into disrepute and has been practically disregarded in a great many particulars. The decision of the Supreme Court of the United States just rendered in the Brown case is therefore calculated to create a feeling of congratulation in railroad and investment circles. It does away with the scandalous impunity with which the provisions of the Interstate Commerce law might be evaded or subverted and yet the guilty parties escape all punishment. The ruling of the court of last resort upon this phase of the question settles the matter as to the obtaining of testimony in such cases. It is a weapon, not only for the Interstate Commerce Commission itself, but for the

railroad associations, and the honestly conducted roads which desire to have competition conducted upon an open and above board basis. There is, therefore, great rejoicing on the part of the commissioners of traffic associations and of officials of the larger railroad lines, and the feeling in such quarters is that the two prevalent abuses, underhand cutting of rates and concessions to favored shippers, which made the fair maintenance of rates a practical impossibility, are now things of the past.

The Brown case involved the right of the government to compel witnesses to testify to violations of the Interstate Commerce law. Heretofore witnesses, by simply refusing to give testimony in such proceedings on the ground that such testimony would incriminate them, have blocked convictions. Hereafter, under this decision, anyone, railroad official or shipper, can be compelled to give testimony upon such matters, and upon refusal can be committed for contempt of the court. A witness, however, by giving testimony, is absolved from punishment, though his evidence can be used against his associates.

It would, indeed, tend to demonstrate the prevalence of the evils complained of to find railroad authorities so generally disposed to consider that the action of the court will at once cause a great decrease in the manipulation and cutting of rates. Everyone, it is now held, who is connected with railroad management will know that all other persons in the service and having any knowledge of the facts can be called and compelled to testify, thus placing the responsible parties in jeopardy of fine and imprisonment. This alone, in the opinion of prominent railroad managers, will tend to keep the men who regulate the traffic and rates of the railroads on the safe side, as they will not care to place themselves in a position where they might be forced to answer questions on such points. The safety of the rate-cutters has heretofore been in the secrecy of the cut and rebate. It is, therefore, thought that the result will be a better enforcement of rates than at any time since the Interstate law was put into force. Indeed, there are some authorities who consider that, next to the authorization of railroad pooling agreements, the Brown case decision is the best thing for the roads that the railroad situation could have developed. It will certainly have the approval of investors as a class, while the action of the Interstate Commerce Commission, in seeking for instances of violations of the law and in punishing the guilty officials, will be looked upon with great interest.

MUTUAL INSURANCE ABUSES IN PENNSYLVANIA.

Recent reports of state insurance officials have abounded with criticism of abuses of the system of mutual insurance. Complaints on this score formed a feature of the report of the New York State Superintendent of Insurance, noticed in these columns lately, and the same is true of the report of the Insurance Commissioner of Pennsylvania, just completed, in which much space is devoted to an exposition of the necessity for more restrictive legislation respecting mutual fire insurance companies. The commissioner says that within the year covered by the report much has been done by the department to remedy the loose organization of some of these companies. During the earlier part of the year, it appears, there was a suspicious number of applications for charters. The papers were presented with every outward form and appearance of regularity, but a little investigation revealed the fact that a considerable number of the applications for insurance were not made in good faith. Some of those whose names were used, contrary to the requirements of the law, did not, the commissioner says, have a dollar's worth of insurable property, and could not have intended, therefore, to take out the insurance for which it was pretended they had applied.

According to the report, the position assumed by some of the promoters of these companies was that it was not necessary for the applicant to take a policy, but that he could subscribe for any amount he pleased, and place the risks anywhere he pleased. This, the commissioner held, could not be conceded, he taking the ground that as soon as a mutual company is organized and a policy is issued there is both a moral and a legal obligation upon all who have signed as applicants for insurance whether policies are issued to them or not; that their application makes them members, and they would clearly be assessable for their proportion of any loss that might occur, that proportion being determined by the amount of insurance for which they have made application. To make this responsibility obvious to those participating in the organization of these companies, and also to prevent the unauthorized use of names to pad out applications, a ruling was made by the department requiring that the names of those applying for insurance should be in the handwriting of the individuals themselves, and not, as formerly, permitted to be written by somebody else. The effect, it seems, was immediate. The restless craze for the organization of mutual fire companies ended with an abruptness that was striking. Before that ruling was made there had been chartered an average of one mutual company a week for a long time. Since then—and it is now several months—there have been but two applications for a charter, of which one was not granted, a warrant being sworn out for the promoter instead.

Reference is made in the report to a decision of the Supreme Court of the state to the effect that a mutual fire insurance company has the power to issue cash policies without liability to assessment. While not questioning the soundness of the decision under the law, the commissioner suggests that the law should be so amended as to make these methods impossible in the future. Under the authority given to issue non-assessable policies it is possible, the commissioner says, for a mutual company to substantially evade the prohibition against insuring upon both the joint-stock and mutual plans. A mutual company may issue all-cash policies, the same as a stock company, without the safeguard of capital; indeed, as a matter of fact, some mutual companies are doing business exclusively on this basis, issuing no assessable policies whatever. There is, the commissioner suggests, no security for the assured in this system, for the reason that the assets of a mutual company, and, therefore, its safety, lie in the assessable policies.

In his review of the abuses of the mutual system he disclaims any intention to criticise the business of insuring upon the mutual plan when properly conducted. He says: "The system was designed to be managed for mutual benefit and protection, not for individual profit. The original theory clearly was that it should be a mere neighborhood insurance, transacted within certain territorial limits, where the responsibility of all parties could be readily known. There are many mutual organizations in different parts of the state conducted upon that theory. They operate upon the true mutual principle, with premium notes as the basis of security. Their business is properly confined within a limited territory, so that assessments are secure and are collected with certainty and celerity. * * * These deserve encouragement and all the protection which the state can properly give them, for they are offering safe insurance at minimum rates, and offer protection to many thousands who could not afford to buy it in any other way."

The commissioner's views of public policy prompt him to suggest the amendment of the existing law so as to compel mutual fire companies to confine themselves to insurance on the purely mutual plan, the purely mutual plan being defined unmistakably as a business conducted with premium notes only as a basis of security, so as to divest existing statutes of possible obscurity on this vital point; to restrict the operations of mutual fire companies within reasonable territorial limits; above all, to prevent them from going outside the state to seek business, and to prohibit by the exact terms of the law the issuing of cash policies by mutual companies, limiting such policies to joint-stock companies which can be indisputably compelled to hold a proper reserve for the protection of such policies. The latter amendment alone would, the commissioner says, eradicate a very serious abuse and danger.

FARM PRICES OF WHEAT.

An instructive table of average prices of wheat per bushel on the farm in Minnesota, at New York, and at London, for thirty-three years, has been compiled by Mr. L. G. Powers, chief of the Bureau of Labor Statistics of the state named. It is for the period mentioned, ending with 1894:

				Differences	
Year.	*Minnesota.*	*New York.*	*London.*	*Minn. & N. York.*	*Minn. & London.*
1862-66	56.5	115.0	....	58.5	....
1867-70	65.3	138.6	175.6	73.3	110.3
1871-74	73.1	134.1	176.3	61.1	103.2
1875-78	72.7	110.5	149.2	37.8	76.5
1879-82	92.2	132.4	149.6	40.2	47.4
1883-86	64.2	92.4	113.5	28.2	49.3
1887-90	73.4	95.3	106.1	21.9	32.7
1891-94	62.1	83.5	....	21.4	....

These figures are mainly significant because they go to show the truth of the declaration made by Mr. Edward Atkinson a dozen or more years ago, that American wheat would sell in the not far distant future as low as 34s. per quarter, with practically as much profit to the producer as it then brought with the Liverpool price, above 50s. per quarter; in short, that the reduction of cost of wheat to the ultimate consumer was to come very largely out of the falling in cost of transportation.

From 1867 to 1870 the Minnesota farmer realized only a little more than one-third of what his wheat was quoted at in London, an average of 65.3c. per bushel, while 110.3c. was absorbed by middlemen, dealers and transportation companies. From 1887 to 1890 the farmer received nearly 70 per cent. and the other classes only 30 per cent. of the $1.06 per bushel paid in London. The decline in the difference between what is received by the Minnesota farmer and what is paid by the British miller measures the fall of grain prices abroad. The western producer has received no benefit from the change, and the eastern farmer has lost by it. The difference has gone in as reduced prices to the foreign consumer. But the Chicago *Tribune* points out that the farmer has received his benefit of reduced freight charges and cost of handling merchandise in the objects purchased by him if not in those he has had to sell. As a purchaser of implements and food and clothing, "he reaps his share of the advantage derived from the partial elimination of middle charges, just as the purchaser of his wheat in London derives a corresponding benefit in his purchases of the produce of the northwestern farm."

It is pointed out in the report that the Minnesota farmer realized a general advance in the prices obtained by him from 1867 to 1882, and thereafter a decline set in. Some of the advance arose from the introduction of the roller process in milling in Minneapolis, which raised the price of hard spring wheat from a level of 10c. below to 10c. above the best white winter wheat of New York. Since then other milling inventions have raised the price of winter wheat to nearly the same figures as those for hard spring, and this accounts for some of the subsequent decline shown in the table for Minnesota.

Commenting on these figures, Mr. Edward Atkinson says that while the whole decline in the price of wheat in London is accounted for by the reduction in the charges of various kinds between the farm in the northwest and the market of the English metropolis, the gold received by the farmer in the Mississippi valley has about doubled in purchasing power, in respect to tools, clothing and foreign articles of food. The growers of corn and oats and the converters into provisions are even in better condition. "They have been in the receipt in each five years of more gold for their product, while the purchasing power of the gold has increased greatly. These facts enable us to account for the rapid discharge of farm mortgages in the west down to the panic of 1893."

FOREIGN TRADE OF THE SOUTH AFRICAN REPUBLIC.

Johannesburg, February 24.—The newly issued official report of the value and quantity of goods imported into the South African republic during 1895 shows practically a continuous growth in the volume of trade from one month to another, and this despite the slight setback in what is practically the sole industry of the state—viz., gold mining—during the last three months of the year. For December the imports totaled $5,260,845 and for the year 1895 $49,081,520, and the growth in the monthly returns which these figures indicate may be taken as the normal condition of things in this prosperous country, which may only be adversely affected at present by political matters. Leaving out of account the shipments of specie from England, which have been unusually heavy, the largest item of the year's imports is machinery, which figures at $10,279,470—nearly a fifth of the whole. Ready-made clothing imported figures at $3,255,760; timber, $1,807,610; distilled liquors, $1,312,330; dynamite (government monopoly), $1,002,290; candles, $580,075; jewelry, $266,955; hats, $263,670; soap, $222,105, and musical, chemical, surgical and other instruments, $208,170. These are some of the leading items which the republic imports from year to year in increasing quantities, and against which it exports practically nothing except the product of the numerous gold mines. The Witwatersrand district alone produced last year gold

to the value of $40,000,000, and the other gold-producing districts of the country brought up the total to about $45,000,000. Of the various agricultural products, the Transvaal, so far from being an exporting country, raises much less than the quantity required for the maintenance of its large mining population. The neighboring Orange Free State draws $5,000,000 a year for produce and fruit sold in the Johannesburg market alone. Large sums are spent on foodstuffs imported to the Rand from the other South African states, Australia, and quite lately from America also. At the moment there are only three producing factories of any importance in the country—the Hatherly Distillery, holding a government monopoly; a cement factory, started under a government monopoly (since abandoned), and a factory recently set agoing at Pretoria for the manufacture of cyanide of potassium, employed in the recovery of gold from tailings. A dynamite factory, intended to be the largest in the world, has been under construction for about a twelvemonth, and is expected to begin operations shortly. It will be operated under a government monopoly granted two years ago, and under which dynamite is presently imported and retailed to the mines at $21.25 per case, whereas at Kimberly, where the trade in explosives is open to competition, the price to the diamond mines is only $9.37½. Only a small percentage of the difference in price finds its way into the treasury of the republic. The chief beneficiary is a German gentleman, Mr. E. Lippert, to whom the monopoly was granted, and who, besides one or two others, draws enormous royalties from the sale of dynamite, which on the Rand alone now amounts to about 150,000 cases per annum.

Of the total imports of $49,081,520, America contributed, roughly, $4,500,000, being about one-eleventh of the whole. The largest item of American merchandise is now unquestionably timber, which is imported from Puget Sound in enormous quantities for mining and building purposes. About a twelvemonth ago an American citizen, Mr. F. R. Lingham, entered into an agreement with the Netherlands Railway Company to open up a trade, chiefly in timber, between the western states of America and the Transvaal by way of Delagoa Bay, and the result has been to place practically the whole mining timber trade of this republic in the hands of an American syndicate. In December last no fewer than twelve vessels were at Puget Sound bound for Delagoa Bay with timber. This one fact will convey some idea of the trade being done with this republic by the Lingham syndicate. Next to timber, the most important line in the Transvaal's imports from the United States is mining machinery. Several American manufacturing firms do a large trade with the Transvaal mines, and the chief firm of American importers here, Chapin & Manion, Limited—Mr. Manion being the American consul on these fields—report that the demand for the most improved types of American mining appliances is greatly on the increase of late. The growth of the republic's trade with America will be sufficiently indicated by one comparison. In 1893 the imports from the United States totaled $2,407,916, while in 1895 they had increased to about $4,500,000. Another sure indication of the volume of trade passing from the one republic to the other may be found in the fact that no fewer than three steamers per month now leave New York for Cape Town direct, the great bulk of the cargo being consigned to the Transvaal. This is irrespective of frequent sailing ships, which also make the voyage direct to Cape Town, and of the numerous vessels, both steam and sailing, running under the auspices of the Lingham syndicate between the western states and Delagoa Bay. Besides the articles of commerce already mentioned, a good trade is being done between the States and the Transvaal in agricultural implements, for which there is a good market here. Quite lately, owing to the severe drouth and consequent scarcity of foodstuffs all over South Africa and the inability of Australia from a similar cause to meet even the normal demands made upon her, considerable quantities of wheat, flour and corn have been imported into the Transvaal from New York, and for some time to come America is certain to be drawn upon for foodstuffs of various kinds. Prices here are good all round, and on account of the great scarcity the government has withdrawn the special import duties, which have hitherto made the importation of corn and some other commodities impossible. Although the result of the recent disturbances has been to considerably restrict the spending capacity of the mining industry and the Transvaal as a whole, still this young state has great recuperative powers, and there can be no prolonged depression in its commerce. If a peaceful and harmonious settlement of the present political difficulties is arrived at the immediate effect will be to give the trade of the republic a great impetus in a forward direction. In discussing the foreign trade of the state a very important factor, from an American point of view, is the fact that on the Rand gold fields alone there are American citizens to the number of no fewer than 2,000, according to the estimate of Mr. Manion, the consul. Among these are the foremost mining engineers and managers in the country.

ITALIAN FINANCES.

Italy's Abyssinian misadventure has made the financial position of the country still more difficult. The fact that there should be a reduction of the military and naval expenditures of the kingdom is patent to any one who examines the matter even in the most cursory way. At the same time this is exactly what the Italian people, as well as their statesmen, seem unwilling to do. The idea seems to be that the position of the country, in the eyes of the world, must be maintained, and though the present Prime Minister, the Marquis di Rudini, is known to be less wedded to the Triple Alliance than his predecessor, Signor Crispi, he shows no disposition to abandon the Dreibund, nor, indeed, to let the costly and useless experiment of an Italian colony in Eastern Africa go. While a cutting down of the army and navy would be most advisable, it is also true that the outlay for public works could with advantage be seriously reduced, and the enormous number of petty officeholders who infest the country and constitute a drain of its resources could be cut down to much smaller proportions, though reasons connected with the internal politics of the country may render the latter an impossibility.

Discussing the subject of Italian finances, the London *Statist* in a recent issue examines the subject in detail, and points out that, apart from the great reforms to which reference has been made, there should be a reform of the country's fiscal and banking system. It says: "The debt of Italy has grown enormously since the unification of the peninsula. Much information on the point will be found in a paper read before the Institute of Bankers in February of last year by Mr. Rozenraad. Here it is enough to say that the national debt amounts to about £513,000,000, according to the Statistical Annuario, and that the local debts raise the total to about £600,000,000. For several years past the amount of the debt held abroad has been rapidly decreasing. In spite of all the mistakes that have been made, the economic condition of the country has been improving. Its savings have been growing; both individual capitalists and the savings banks have been buying back very large amounts of the debt held abroad. This is undoubtedly favorable to the country. But the foreign holdings are still large, and the necessity the government is under of making foreign payments is one of the causes why the exchange is so much against Italy. It is not the only cause, nor even the chief cause, for the balance of trade has for the past ten years or so been very much against Italy. Still, it has an important influence upon the exchange. At the end of the past year the total amount of interest payable on the foreign-held debt of Italy was over 92,250,000 lire, of which more than 43,500,000 lire went to France, or not far short of one-half. Over 32,750,000 lire went to Germany, or somewhat more than one-third. Little more than 10,000,000 lire came to England; somewhat over 3,250,000 went to Austria, and somewhat less than 2,500,000 to Holland. The total foots up to £3,692,000. Ever since Italy entered the Triple Alliance French holders have been selling Italian rente, and the sales became still greater when the rapprochement between Russia and France took place and France undertook the rehabilitation of Russian credit. Germany then bought largely; but the greatest buying, and consequently the greatest support of the market, came from Italy itself."

The banking system of the peninsula also is, it would seem, exceedingly faulty. There are only three banks of issue in the country—the Bank of Italy, the Bank of Naples, and the Bank of Sicily, all of which are in a desperate plight. There is an enormous lockup of their resources, and it is hard to see how credit can be restored. On this point the *Statist* observes: "Since the new banking law was passed the position of the banks has grown worse instead of better. That law requires them to raise the metallic reserve on their bank notes from 33 per cent. to 40 per cent. within a year. But the embarrassments of the government compelled it to borrow from the banks £8,000,000 in gold for the purpose of repaying debts abroad which could not be renewed. If the government could put its finances in order and could repay to the banks the money so borrowed, the position of the banks would be greatly improved. But as matters stand at present it does not seem likely that the Treasury will soon be able to make the repayment. The wisest course, no doubt, would be to wind up the existing banks, and to substitute one or more really strong institutions, attracting foreign capital and foreign management if possible. But there does not seem much prospect of that being done; and, indeed, it is hardly likely that foreign capital could be attracted if there is not a very material improvement in the political as well as in the financial condition of the country. Meantime, it is something that the economic condition of the country is improving, and that the banks—at all events before the Abyssinian troubles began—were laboring energetically to reduce their note issues. On November 30 last the total circulation of the three banks of issue was, in round figures, 1,072,000,000 lire, or not far short of £43,000,000. There were at the same time nearly 508,000,000 lire issued on account of the state, or rather more than £20,250,000, making the total circulation 1,580,000,000 lire, or nearly £63,250,000. This is undoubtedly an excessive amount. We do not say so merely because the notes are at a discount, for that is due principally to the discredit of the government, to the unfavorable balance of trade, and to the necessity the government is under to remit large sums annually in payment of interest abroad, to the general knowledge of the great lockup of the banks, and to the unfortunate connection of the banks with the state. Mere restriction of the note circulation, however, will do little good. What is essential is that the management of the banks should be above suspicion, and that they should be placed in a solvent position."

JAPANESE COMPETITION IN AMERICA.

The subject of Japanese competition in the United States, which has been the subject of some discussion in this country, is touched upon in a recent article in the Japan *Weekly Mail*. That journal indorses the view of a San Francisco committee, which held that it was decidedly anticipating the course of events to believe Japan capable of competing with the United States for many years to come, and says:

> Cheap and expert labor is not the only essential to success in such competition. It has been proved that even in the case of an essentially Japanese specialty the shrewd, experienced European can more than hold his own. We allude to lacquer. The Japanese stand easily at the head of all nations in the quality of their lacquer. There, if anywhere, they should be able to defy rivalry. Yet, what are the facts? Japanese lacquer experts in their attempts to capture the New York market have had their thunder stolen by Germans, who gauge the taste of the Americans with much greater accuracy and produce lacquers better appreciated and cheaper than those of the Japanese themselves. Not fine lacquer, indeed, nor anything like as fine, but better suited to the immediate purpose of its manufacturers. Another case in point is the work of the silversmith. As chiselers of metal the Japanese have no peers. Their skill in that line ought to open a wide and profitable field in Europe and America. But it does not. With the exception of a few fancy articles, objects of art rather than of utility, they sell nothing abroad. They have not yet found the range of Occidental taste, and, judging from past experience, it seems likely that they will continue to waste their strength for a long time upon unfruitful essays.

The Yokohama journal holds, in short, that intercourse and interchange of ideas between the East and the West must become much closer and less superficial before Japanese manufacturers can adapt themselves to the requirements of the Occident sufficiently to be formidable competitors. In such staples as cotton yarns, textile fabrics, silk handkerchiefs, lucifer matches, and so forth, they find, the *Mail* says, easy guidance, but where independent judgment and the mercantile instinct are needed they still show themselves backward. That the Japanese people may look forward to a great manufacturing future the journal quoted does not doubt, but it regards that future as still many years distant from the standpoint of Western greatness.

CHINESE RAILWAY PROSPECTS.

With the outlook for the establishment of several new lines of steamers to cross the Pacific ocean, the industrial development in Japan, and the recently reported arrangements looking to the extension of the rudimentary railway system in China, constitute ground plans of what promises to be an especially active commercial and industrial exploitation in the eastern hemisphere during the next few decades.

Not least significant in this direction is the fact that since the recent war between China and Japan, the Chinese government has so far reconstructed its ideas of where the real interests of China lie as to provide for the construction of railways, so that great interior and almost unknown districts of the empire may be brought into closer communication with the ports. The American consul at Tien-Tsin reports that about seventeen years ago there was in the whole empire of China only one short railway, ten miles in length, the tracks being, of course, of iron, extending from the Kaiping coal mines towards Tien-Tsin on the seacoast, ultimately being completed to that point, eighty miles distant. When this original ten miles of railway were constructed is not stated, but it may be interesting to add that the motive power employed on that road at that time was coolies, who pushed the loaded cars up and down the tracks, twelve or fourteen hours each day, at 10c. each daily as wages.

It was about that time that the industrial enterprise was put in charge of an English engineer, who, not appreciating or regarding what may be called Chinese conservatism, started in to revolutionize what may be called the railway system of China, which action the authorities at Pekin promptly vetoed. They did not accomplish this in time, however, to prevent his procuring a locomotive, which he made himself with four driving wheels ordered from the United States, an old disabled stationary engine boiler and cylinders from a broken-down winding engine. The appearance of this locomotive on the Chinese coal railway, with yellow dragons emblazoned on its sides, produced consternation throughout that portion of the Chinese empire which heard of it, and the locomotive was suppressed. It was used, however, inside the yard about the mines, and at length gradually extended its travels out on to the railway once more. The Chinese discovered that war, pestilence and famine were not being spread broadcast by the engine, and imperial permission was finally secured to use it. The builder of that locomotive seventeen years ago is to-day the chief engineer and general manager of the Imperial Chinese Railroads—an American, C. W. Kinder.

The Chinese Railway, as at present finished, begins at Tien-Tsin, and the first station is at Tongku, 27 miles distant, 6 miles from the mouth of the Gulf of Pechihli. From Tongku the road extends north east to Shan-Hai-Kuan, the present terminus of the portion which is operated and the terminus on the Pechihle at the Great Wall, about 150 miles distant from Tongku. But surveys have been made for an extension of the road 200 miles beyond the gap in the Great Wall at Shan-Hai-Kuan, 10 miles of which is completed. The road, when finished, will lead to Kirin, the center of Manchuria, and a branch will extend thence to the head of the Gulf of Liao-Tung, where there is a good harbor. The principal interest attaching to information regarding this route and these plans is due to the fact that the territory thus to be opened up constitutes a portion of that with which Americans became acquainted during recent warlike operations in China to prevent the invasion by the Japanese. In fact, work on this road was interrupted at this time, and had not been resumed up to the close of the last year.

In view of comparatively recent announcements of concessions in China for the construction of lines of railway, some account of the Shan-Hai-Kuan Railway presents points of interest. All the foreigners employed "are either English or Scotch," and English methods of railroading therefore largely prevail.

The greater part of the line runs through a flat alluvial country, which, during the rainy season, is subject to heavy floods. The sharpest curve has a radius of 1,000 feet, caused by two private cemeteries that could not be molested.

The country from Tien-Tsin to Shan-Hai-Kuan contains no large towns or cities, but a great number of mud villages. As yet, it is strictly an agricultural country. The staple product is corn, insufficiently produced to support the natives. The Kaiping coal mines, about 80 miles from Tien-Tsin on the road, comprise the only mining industry as yet in operation, although there are deposits of coal, iron, gold and silver awaiting the intelligent application of capital.

The natives are very poor at and around Tong-shan, the center of the operated line, and the location of the Kaiping coal mines, it having been estimated that about 50,000 natives died of starvation during the months of March and April of this year. The trains are all "mixed," freight and passenger. From Tien-Tsin to Tongku there are four trains each way daily, and from Tongku to Shan-Hai-Kuan there is one train each way daily. The trains are not all heavy, and in speed average 15 miles per hour. The road usually pays its running expenses, but as yet has yielded no interest on the first cost of construction and equipment. The building of the road, with its entire equipment, has been done with the English idea of permanency, and without regard to first cost, or the work required of it. No wooden structures are seen from one end of the line to the other. Stone, brick, concrete or steel are the materials used. The road is a standard gauge, and its bed is somewhat wider than in our country. The rails were made at Barrow, England, or by Blockow & Vaughn, and were delivered at Takee for less than $21 per ton, "or at a price that cannot be touched by any of our firms." The wooden ties come from Japan, some from Oregon, and a few from Vladivostock.

The cost of timber is so great that wooden trestles are out of the question. The station houses are all built of light, burned brick, plastered on the outside. The broad platforms are of stone or concrete filled in with earth and cinders. At the main shops at Tong-shan they repair cars and locomotives and construct rolling stock. About 500 men were employed at Tong-shan in August last, but when the shops are run to their full capacity there are 900 names upon the rolls. The company builds all of its passenger and freight cars, and also the tenders to locomotives. The sides and roofs of the cars are of Oregon pine.

The locomotives (mogul type) are all English and Scotch, with the exception of one American engine built by the Grant Company. American cast-iron wheels have been tried, "but did not give such satisfactory results as steel-tire wheels from Europe."

The passenger cars are of an inferior quality as regards comfort, but they are superior to the treatment they get from the natives. Two trains were once fitted out with the Westinghouse brake. Owing to some trouble, the directors failed to adopt the system. There is one detail of the rolling stock that is American—"all cars have the Janey coupler. It is a source of regret to the general manager that he cannot manufacture this indispensable article, but must pay the American price for it."

Details concerning wages present some incongruities. Foreigners, of course, get much more than natives, but not more than the same class of men receive at home. Most of the engine drivers and machinists are natives, "and they do good work." A common laborer gets $4 (Mexican) per month; fireman, $5 to $6; engine driver, $14 to $45. At present the two highest paid native drivers on the road get $41 and $46, respectively. An English driver can get, as maximum wages, $200 (Mexican) per month; a section hand gets $4; a foreman, $6; a native clerk, $80, if he can speak and write both English and Chinese. All the work possible is piecework. The trains are run by the English staff system, and only one train is allowed in a block.

In August, 1895, all construction was at a standstill. "Nothing is being done except to keep the few trains necessary running. What the future policy will be as regards railroads no one can tell. Certain lines will eventually be built. The Chinese government already sees the necessity of connecting Pekin with the Yangtze valley. Prejudices, lack of funds, internal dissension, and jealousies between viceroys are some of the factors that have to be dealt with before we can set on foot any organized system for the further construction of railroads. At present the outlook is gloomy, but there are rifts in the political clouds, and, in time, the sun of prosperity and progress may break through."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

In store Mar. 21, 1896.	*Wheat.*	*Indian corn.*	*Oats.*	*Barley.*	*Rye*
Minneapolis	19,120,000	55,000	750,000	297,000	117,000

Washington advices give an account of a hearing before the Senate Committee on Foreign Relations upon the treaty providing for a commission to assess the damages, if any, accruing to the subjects of Great Britain as the result of seizures in Behring sea. The treaty has been amended by the Senate Committee only with respect to minor details. The agreed statement of facts before the Paris tribunal by the counsel of the two governments, with regard to seizures, has been, it is said, incorporated in the treaty, but this, it is held by senators on the committee, is not in any sense binding upon this government. The language of the agreed statement of facts has been amended in some particulars, and this, it appears, is, so far as it can be ascertained, the only change made in the text of the treaty. Before the Paris court of arbitration twenty sealing vessels put in their claims for damages. All of these claims now appear in the treaty for settlement, and in addition there are four other vessels whose claims never did appear before the tribunal. Secretary Olney is urging speedy action upon the treaty, because of the need of something being done before the sealing season progresses too far.

CURRENT BUSINESS NEWS.

Industrial.

A Philadelphia dispatch says: "H. W. Cramp, of W. Cramp & Sons, announces that arrangements for amalgamation of ordnance department of works with other extensive organizations have been completed, and hereafter the various gun-making concerns interested will be known as the American Ordnance Company. The new company embraces Cramps, or as plant is known officially, the Driggs-Schroeder Ordnance Company, the Hotchkiss Gun Company of Providence, R. I., and Hartford, Conn., and American Projectile Company of Lynn, Mass. The president of the company is General A. C. Ordway, and general superintendent is E. C. Parkhurst. Capital is $2,500,000."

A Birmingham dispatch says that the Nashua Manufacturing Company, of Nashua, N. H., proposes to erect a cotton mill worth $600,000 on the line of the Kansas City, Memphis & Birmingham Railroad, in Walker county, Alabama.

The output of southern iron continues to be very large, and stocks do not accumulate.

The *American Manufacturer* (Pittsburgh) says the Pittsburgh Plate Glass Company "handles practically the entire plate glass production of the country," and that it "is nothing less than a revival of the old fight against the middleman and an effort to oust him out of the trade. The company announces that it will establish a selling agency at New York, and in time in every large city and distributing center in the United States. By this plan plate glass will go from the manufacturer directly into the hand of the consumer."

A Princeton, Ill., dispatch says that work on the Hennepin Canal will be suspended this spring, the appropriations being nearly exhausted.

At a meeting of the leading Bessemer and Messaba iron ore miners in Cleveland last Friday night it was decided to establish a universal price of $4 per ton for Bessemer standard and $3.40 to $3.75 for Messaba ores. It was also decided to curtail the shipments of these two grades of ore about 2,000,000 tons during the coming season.

A dispatch from Findlay, Ohio, says that an oil well has been sunk in Marion township, seven miles from there, "which is flowing at the rate of 1,000 barrels a day."

Much interest is manifested in London commercial circles over the announcement that a leading firm has made extensive purchases in Alabama of pig iron, and is arranging for further purchases. Commenting, the *Iron and Coal Trades Review* says: "England is threatened with an invasion of American pig iron. This is one of the most serious blows to the supremacy of Great Britain as a manufacturing nation."

Beginning April 1 the wages of miners in the Clearfield, Beech Creek, Cambria and Gallitzin coal regions will be raised 5c. a ton.

A Minneapolis dispatch says that the lumbermen have decided to reduce the lumber cut 25 per cent.

The Edgar Thomson plant of the Carnegie Steel Company has started to make 16,000 tons of steel rails for the Japanese government. They will be used on the imperial railways of the island empire. Each will weigh 56 pounds to the yard and be 60 feet in length. This is the first order of rails ever placed in this country by the Japanese government.

An El Paso, Tex., dispatch says that "the Westinghouse interests have secured control of the Washington camp group of copper mines in Pima county, Arizona, the heaviest producing copper properties in the territory," and will take possession of the defunct International Copper Smelting plant in El Paso at once.

Commercial.

Mr. J. P. Morgan, who sailed for Europe this week, said to the New York correspondent of the Philadelphia *Ledger* that the business outlook depends on Congress. "If it continued to keep things stirred up there as it has been doing for the past two or three months no one can predict where we will come out. First the Venezuelan excitement, then the Monroe doctrine resolutions, then the Cuban belligerency question, and, lastly, the talk about battleships, big guns and torpedoes. And, as if this were not enough, the Armenian question had to be brought up for discussion. Is it any wonder that business should be depressed with so many war scares and foreign complications on the hands of Congress? No business man cares to make many ventures with the shadow of a foreign war hanging over his head."

A French Chamber of Commerce is being organized in New York city "to encourage the commerce between the United States and France."

The Chattanooga *Tradesman* says: "The acreage of cotton will be much larger than that of last year. The crop will also be better cared for. The sales of fertilizers and of implements have been very large in the cotton states. Last year's high prices and the fact that their cotton is nearly all sold will result in one of the largest crops yet known, subject, of course, to the condition of the weather.

Financial.

The following securities were sold at auction at New York this week:

$2,000	American Debenture Company series "E" debentures (Knickerbocker Trust Company receipts) (hypothecated)	$100

The American Sugar Refining Company has filed the following statement of December 31 last with the Commissioners of Corporations of Massachusetts:

ASSETS.

	1895.	1894.	Changes.
Real estate, etc.	$43,140,709	$43,119,866	Dec. $20,843
Cash, debts rec'vble.	24,676,294	19,428,000	Inc. 5,248,294
Sugar and supplies	12,462,776	10,742,456	Inc. 1,720,320
Improvement acc't	6,285,233	6,607,563	Inc. 677,670
Investments	25,692,009	26,204,599	Dec. 509,590
Totals	$112,257,021	$105,099,484	Inc. $7,157,537

LIABILITIES.

Capital	$73,936,000	$73,936,000	----
Debts	25,139,765	21,394,000	Inc. $3,745,765
Reserves	13,181,256	9,769,484	Inc. 3,411,772
Totals	$112,257,021	$105,099,484	Inc. $7,157,537

The Edison Electric Illuminating Company of New York has declared a quarterly dividend of 1½ per cent., payable May 1.

Senator Jones, of Nevada (Pop.), bluntly states the ultimatum of the silver men to be that the next Congress, so far as the Senate is concerned, will be in control of the silver men. There will be no legislation on the tariff—nothing—for the next ten years unless silver is admitted to the mints on the same basis as gold. "The cry," says he, "is now protection and free silver. We will have both or neither." Colorado silver "has as much right to protection as Pennsylvania coal."

Senator Hansbrough, of North Dakota, has introduced a bill to charter the Maritime Canal Company of North America. This company proposes to construct a canal from Lake Erie to Lake Ontario, and from Lake Ontario to the St. Lawrence river, or to Lake Champlain, thence by water to the Hudson river, thus forming a deep waterway to the Atlantic. The canal is to be 26 feet deep and 300 feet wide. The company is empowered to issue $200,000,000 bonds.

Mr. Sauerbeck, the statistician, reports the average price of forty-five staple commodities on March 1 at 61.4 per cent., taking the average of eleven years from 1867 to 1877, both inclusive, as 100 per cent. A year ago the average was 60 per cent., while in 1894 it was 63 per cent. Mr. Sauerbeck finds that prices this year have so far been unusually steady, so that there has been scarcely any important fluctuation since January 1.

Railroads.

Judge Nathan Goff in the United States Circuit Court has signed an order providing for an extension of the floating indebtedness of the Baltimore & Ohio Railroad Company under petition of Receivers Cowen and Murray. The purpose of the order is to allow the receivers to make renewals of the railroad company's present outstanding obligations of the character of notes, acceptances and indorsements, but so as not to enlarge the principal of its indebtedness.

The Flint & Pere Marquette Railroad reports gross earnings for January of $229,130, an increase of $53,492 as compared with the same month of last year, and net $56,174, an increase of $27,771. Fixed charges were $50,924, leaving a surplus of $5,250, an increase of $27,937.

The Spokane Falls & Northern Railroad reports gross earnings for February of $26,005, an increase of $11,462 as compared with the same month of last year, and net $16,664, an increase of $9,681.

The New Orleans Traction Railroad reports gross earnings for February of $115,325, an increase of $27,814 as compared with the same month of last year, and net $56,069, an increase of $21,694.

The Cumberland Valley road reports for the year ending December 31:

	1895.	1894.	Changes.
Gross	$889,157	$831,646	Inc. $57,511
Net	239,597	255,890	Dec. 16,293
Surplus	52,231	58,833	Dec. 6,602

The all-rail east-bound shipments of dead freight from Chicago last week were 81,827 tons, against 90,757 tons the previous week and 57,123 tons the corresponding week of the previous year.

The Chicago, Rock Island & Pacific Railroad Company has declared a quarterly dividend of ½ per cent., payable May 1.

The Chicago & Northwestern Railroad Company reports gross earnings for February of $2,384,172, an increase of $491,554 as compared with the same month last year.

Judge Nelson, of the United States Circuit Court at Boston, has appointed C. M. Hayes, general manager of the Grand Trunk Railway Company, and E. C. Smith, president of the Central Vermont Railway Company, receivers of the Central Vermont Company in Massachusetts. They have also been appointed receivers in Vermont and northern New York. They were appointed in the equity suit brought by the Grand Trunk Railway against the Central Vermont to settle a difference in traffic balances, the amount claimed being $415,712.

At the annual election for directors of the Pennsylvania Railroad Company on March 24, the result was the reëlection of the present board, viz.: George B. Roberts, A. J. Cassatt, Alexander M. Fox, Clement A. Griscom, Alexander Biddle, Benjamin B. Comegys, N. Barker Shortridge, Amos R. Little, Henry D. Welsh, William H. Barnes, William L. Elkins, George Wood and C. Stuart Patterson.

Vice-President John G. McCullough, of the Erie Railroad, says that the negotiations for the purchase or lease of the New Jersey & New York Railroad are pending, but not yet consummated. The terms have been agreed upon, but no papers have yet been signed. He expects there will be an equitable arrangement made before long.

At a meeting Wednesday in New York city of holders of first mortgage bonds of the Seattle, Lake Shore & Eastern Railroad Company, the reorganization committee was empowered by a practically unanimous vote to carry out the reorganization agreement, which provides for foreclosing the road and for the issue of new bonds and stock. There was represented at the meeting $4,045,000 out of a total amount of bonds outstanding of $5,558,000.

Foreclosure suits were begun on March 25 in the United States Court against the Detroit, Lansing & Northern, Detroit, Lansing & Grand Rapids, and Saginaw & Western railroads. The suit is begun by George W. Weld and other Boston bondholders, and is the first step in the reorganization of the Detroit, Lansing & Northern system, which has been contemplated for the last three years. The bill asks for the appointment of a receiver.

The Ohio House of Representatives on March 24 passed a bill placing an excise tax of 1 per cent. on the capital stock of all fast-freight lines and equipment companies operating in the state. The Lake Shore alone operates 167, the Baltimore & Ohio 127, the Erie 166, and the Pennsylvania Company 163. The law requires that these companies shall make full return of the number and value of their cars, the whole length of lines operated in case of equipment companies, and the length of the line operated in Ohio.

The Postal Telegraph Company has declared a quarterly dividend of 1 per cent., payable April 15.

The Metropolitan Traction Company has declared a quarterly dividend of 1¼ per cent., payable April 15.

The annual election of the Pennsylvania Railroad Company results in the choice of all the old members of the board of directors for another term.

The Baltimore & Ohio Railroad Company finds its electric engines "more expensive than steam locomotives, the former costing 38c. per engine mile, while the cost of the latter is but 23c. In other respects, however, the use of electric motors in the tunnel has been found so much more satisfactory than steam that they will be continued."

The following February gross and net earnings are reported:

	Gross earnings		Net earnings	
	1896.	1895.	1896.	1895.
Alabama Gt. South'n	$103,785	$108,010	$20,076	$26,279

Foreign.

An English technical paper says the "competition in steel rails threatens to leave the English manufacturers high and dry unless they can manage to reduce their present quotations, which are based on a uniform charge of £4 15s. per ton for heavy rails. The Grand Trunk Railway Company has this week purchased 15,000 tons of 80-pound rails from the Illinois Steel Company, of Chicago, at a less price than that quoted by English firms. Hitherto the Grand Trunk has purchased practically the whole of its rails from England, but firms in the United States are now running us so hard that we cannot secure Canadian contracts at syndicated prices."

According to a late bulletin of the forestry division, "there are in the United States 2,000 miles of trestle structure, representing an expenditure of $60,000,000. This trestle work has to be replaced every nine years, on an average, causing an annual expenditure of $7,000,000. This, capitalized at 4 per cent., involves a capital of $175,000,000 necessary to maintain these structures. For the purpose 260,000,000 feet, board measure, of timber is annually consumed, nearly all of which is cut from fine, large trees."

The influence of the Hollanders in the Transvaal is said to be gaining ground. They are hostile to the visit of President Kruger to England, and to any friendly settlement of the question between the Transvaal and Great Britain.

Dr. Ohnefalsen-Richter, in a lecture at the Imperial Institute (London) on his twelve years' stay in Cyprus, remarked that the British had shown in Cyprus their talent for colonization. "They had introduced improvements gradually, always with consideration for the condition and needs of the country. If only the Turkish tribute of £92,000 a year could be abolished, the island would soon be even more flourishing than it was when it had a population of 1,000,000 instead of its present 210,000."

The *Australian Trading World* remarks that the low prices current for frozen mutton are due more to the excessive supply of inferior meat than to market influences.

The financial report of the Zanzibar government for the past year shows increased receipts and a large surplus. "The state of British East Africa continues unsettled, and when the Bombay regiment now en route has arrived there will be nearly 1,000 Indian troops, besides the native force, in the country."

The Congo Free State exports in 1895 were valued at 10,943,019 francs, and the imports at 10,685,847 francs, showing increases of 25 and 16 per cent., mainly due to palm oil, ivory and India rubber.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Insurance—Action—Limitation.

Where it was stipulated in a policy of insurance that no action thereon should be sustainable against the insurance company unless commenced within twelve months next after a loss should occur, the Supreme Court of Georgia held that an action brought after the lapse of that period was barred, although it purported on its face to have been a renewal of a previous action which was instituted within the time limited, and to have been brought within six months after the granting of a nonsuit in the first action. Melson vs. Phœnix Insurance Company.

Railway—Country Crossing—Negligence.

The Supreme Court of Minnesota held, in the recent case of Judson vs. Great Northern Railway Company, that while failure on the part of those in charge of a locomotive to give the statutory signals constitutes negligence per se on the part of the railway company, such failure does not render a company liable for injuries received at a common country crossing, if the traveler injured contributed thereto by omitting to look and listen; that swiftly moving and irregular trains are to be expected at such crossings, and that it is the duty of persons about to go upon them to look and listen for such trains, as well as for those upon time or which move slowly.

Constitutional Law—Emery Wheels.

The Supreme Court of Michigan lately held constitutional the provision in act No. 136 of 1887, as amended in 1893 and 1895, providing "that all factories and workshops where emery wheels or emery belts of any description are used, either solid emery, leather, leather covered, felt, canvas, linen, paper, or wheels rolled in emery or corundum, shall be provided with blowers or similar apparatus, which shall be placed over or under said wheels in such a manner as to carry away the dust arising from said emery wheels while in operation, directly to the outside of the building or some receptacle placed so as to receive the dust." People vs. Smith, reported in the *Legal News* of Detroit.

Railroad—Injury—Trespasser.

The Kentucky Court of Appeals held, in the recent case of Thurman vs. Louisville & Nashville Railroad Company, that although a boy riding on the truss-rods under a freight car was a trespasser, the railroad company was liable for injuries received by him while thus riding if they resulted from his being pushed off by one of the train men at a time when it endangered his life, or rendered it probable that he would be injured; that as it was evident from the proof that if violence was offered at all it was at such a time, the only question to be submitted to the jury was whether the train men did push the boy off, and that it was therefore error to give an instruction as to contributory negligence in the usual form, as that was equivalent to saying to the jury that in no event could there be a recovery if the plaintiff crawled under the car and placed himself in his perilous position.

Municipality—Street Improvement.

The Supreme Court of Indiana held, in the recent case of Wickwire et al. vs. City of Elkhart, that a contract for the improvement of a street in a city at the expense of adjoining lot owners can only be legally let to him who is the lowest and best bidder, after a fair opportunity for competitive bidding has been given; that a municipal council must let such a contract upon the terms on which the competitive bids were based; and that where the successful bidder for such a contract provided in his bid that the surplus dirt should be hauled only one-half mile, and that the contractor should have until December 1 to complete his undertaking, while the bids advertised for and the others received required the contractor to dispose of the dirt whatever distance it should have to be hauled, and limited the time for completion to August 1, and the contract as let followed the provisions of the successful competitive bid, the improvement may be enjoined.

Railroad—Trespasser—Negligence.

The Supreme Court of Minnesota held, in the recent case of Brevig vs. Chicago, St. Paul, Minneapolis & Manitoba Railroad Company, that a freight-train brakeman has implied authority to eject trespassers and apparent trespassers from the freight cars of a train, but that where a person bribed such a brakeman to permit him to ride among the freight in a freight car the brakeman and such person thereby became joint trespassers, and the brakeman's implied authority to represent his employer in ejecting such person thereby ceased, so that unless it appeared that the brakeman had received a subsequent express authority to eject such person, his act of doing so in an improper manner was simply an assault of one joint trespesser upon another, and not the act of the railroad company, and that this was true even though the conductor had in the meantime discovered such person in the car and locked him in the same, and he continued to be so locked in the car until such brakeman unlocked the door and so ejected him. The court held that the questions whether the brakeman who let him into the car was the same who drove him out, and whether plaintiff was compelled by force to jump from the train, or whether his act was so far voluntary that he could be guilty of contributory negligence in jumping from the train, were all questions for the jury.

Railroad—Construction—Injury.

The Supreme Court of Georgia held, in the case of The Georgia Railroad & Banking Company vs. Bohler et al., that a railroad company, in the construction and maintenance of its culverts and embankments, is not bound to guard against every possible contingency which may result in injury to the property of others, but it is bound to so construct, keep and maintain its culverts and embankments as that the accumulation of water from freshets, which in the usual course of events are likely to occur, will not cause breaks in such embankments, and consequent inundation of lands situate below; that in guarding against such injuries it is incumbent upon the company to take into consideration the climate, the clearings upon the stream, and all of those varying conditions peculiar to the locality and which might tend to increase the flow of the stream which the culvert was designed to accommodate, and that the question as to whether a rainstorm which produces injury in these cases is such an extraordinary flood as to relieve the railroad company is properly submitted to the jury.

Bond—Sureties—Bank—Depositary.

In the case of The Board of County Commissioners of Hennepin County vs. State Bank et al., recently decided by the Supreme Court of Minnesota, it appeared that the defendant bank executed a bond to the plaintiff, with its co-defendants as sureties, in which it was recited that the bank had applied to be designated a depositary of county funds, the condition of the bond being that if the bank was designated such depositary pursuant to the statute it should pay on demand all funds deposited with it pursuant to such designation. The board of county commissioners designated the bank such depositary, accepted and approved the bond, which was duly recorded, and the county treasurer, pursuant to such designation and bond, deposited county funds with the bank as a county depositary. The court held in an action upon the bond that the answer of the sureties that the board of county auditors never considered the application of the bank and never designated it as a county depositary, and that they never knew that the bond had been approved or that the funds had been deposited with the bank in reliance thereon, did not state a defense.

Husband and Wife—Conveyance.

The Kentucky Court of Appeals held, in the recent case of Bell vs. Mitchell et al., that a conveyance by husband and wife of property held by the wife as her separate estate is not valid when not made in pursuance of or in conformity with the provisions of the deed or will under which the property is held; that where a will under which property was held by a wife as her separate estate provided that no sale of the property should be valid unless the proceeds should be reinvested in other real estate for the wife's separate use, and required the purchaser to see to such reinvestment of the proceeds, a conveyance of the property by the husband and wife to one who accepted it in part payment for other property which he sold and conveyed to the wife did not pass to him any title, as the property which he conveyed to the wife was not conveyed to her for her separate use; that as he acquired no title, his sale and conveyance of the property to another passed no title, as the purchaser from him was affected with notice of restrictions contained in the will under which his vendor held the property, and that the wife had no cause of action against one who purchased from her in good faith the property she had received in exchange for her separate estate, as that property had not been conveyed to her for her separate use.

BUSINESS NOTES.

Credit and Cornered Prices.

The Philadelphia *Press* says: "While the rate for loans on unimpeachable collateral is very low, from 3 to 3½ per cent. in New York, and higher elsewhere, the rate on commercial paper—that is, on loans to those in mercantile business—is 6 per cent. or more, and is reported not easy to secure. In other words, while bankers and others with loanable funds feel perfectly secure as to the future value and earning capacity of the great railroads and other securities of the same character, when manufacturing and mercantile enterprises are under consideration the future is felt to be less secure."

Americanizing "The Rand."

An "outcry is being raised at Johannesburg," says a dispatch to the London *Standard*, "against the alleged Americanizing of the Rand by the mining magnates, who, it appears, have been placing machinery orders in the United States instead of in England. It is pointed out that directors of English mining companies are also directors of American mining machinery companies. John Hays Hammond, the American engineer and member of the reform committee now on trial at Johannesburg, repudiates letters which have appeared in American newspapers purporting to emanate from him and ten of the reform committee prisoners."

The French in Siam.

The London *Times* Bangkok correspondent, writing January 23, "dispels the idea that the French at Chantabun are enormously active and have erected 'formidable forts mounted with big guns.' The French force of occupation numbers 300 Anamites and 100 European troops. Their quarters are surrounded by a rectangular earthwork, with small field-pieces at the angles. No extraordinary works have been undertaken, and only such precautions as any soldier, and indeed any civilian of average intelligence in a similar position, would have taken. In the meantime the town is efficiently policed by the French, and they assist the Siamese governor in keeping the unruly secret Chinese societies in order; the troops are orderly and very little friction occurs."

The British Newspaper Press.

The London *Times* says: "It appears that there are 483 newspapers published in London and 1,357 in the rest of England; Wales is responsible for 100, Scotland for 226, Ireland for 169 and the British Isles for 20, a total of 2,355. Besides these, the magazines now in course of publication number 2,097, of which 507 are of a religious character. Over 200 of these magazines were produced for the first time during the past year. These facts are given in Mitchell's 'Newspaper Press Directory.' Mr. Henry Sell, in another publication of this kind, 'The World's Press,' estimates that £4,000,000 a year is spent in advertisements and that about 1,500,000,000 copies of newspapers are sold annually in London alone."

Development of Tropical Africa.

Sir Francis Scott, speaking at a meeting of the Royal Colonial Institute, London, at which Sir G. Baden-Powell, M. P., read a paper on "The Development of Tropical Africa," urged the expediency of having African settlements and seats of government in the interior. "All the coast settlements, whether on the east or west, were unhealthy, but the interior was quite healthy, and the more they got into the interior the better it would be, both for the Africans and for themselves. In his paper, Sir G. Baden-Powell said that tropical Africa was populated by at least 80,000,000 natives, 50,000,000 of whom were under the Union Jack, but had for ages been dominated and degraded by vicious systems of government and superstition. To save these natives from themselves was no mean or ignoble task."

British Importation of Cattle.

An English parliamentary paper has been issued embodying the correspondence which has passed between the Canadian High Commissioner and the Colonial Office on the subject of the importation of Canadian cattle into England. The paper concludes with a statement from the president of the Board of Agriculture that it would be to the interests of both Canada and the mother country to close the controversy. Trade had been developed on the lines of the bill now before Parliament providing that Canadian cattle shall be slaughtered at their ports of landing, and the board calls attention to the growth of trade in cattle imported from the United States, which have been slaughtered at their ports of landing for the past seventeen years, as proof that the bill will not act to the prejudice of Canadian cattle.

Transport Difficulties in Persia.

The British consul at Ispahan in his last report describes the injury done to trade by the periodical disorganization of transport from the port of Bushire to Shiraz and Ispahan. "Recently the main cause was a mortality among horses, mules and donkeys from murrain. A constant source of disturbance to transport is the traveling of local officials. Their messengers are sent into the surrounding country to impound all the animals they can get. The system is called 'Mal bigiry,' and when it becomes known that it is intended the muleteers flee with their beasts to the hills and hide, so that for a fortnight or more it is quite impossible to get any animals. In consequence of the frequency of this disorganization in the south of Persia, Manchester goods which reached Ispahan by the Persian gulf now go to Baghdad, Kermanshah and Hamadan, a longer and apparently more expensive route."

Conquest and Commerce.

Sir Alfred C. Lyall (late governor of the northwest provinces of India), recently delivered a lecture on that subject at London. "He pointed out that half of our [British] wars in the eighteenth century arose out of disputes over trade. Viewed historically, commerce was not so peaceful a pursuit as it was usually imagined. He wished we could keep to commerce and drop conquest, but it seemed very difficult to do so. Fifty years ago several politicians said we could trade with India just as well whether it belonged to us or not. But all history was against that theory. Wealthy Asiatic kingdoms were too weak to stand by themselves and keep their markets open to commerce. The lecturer remarked that the recent extension of our territory at the Cape was due to commercial enterprise, backed up by great capitalists in London, and, whatever might be the faults of Mr. Cecil Rhodes, he had pegged out the lines of a great dominion for England in South Africa."

Russia as a Wine Producer.

The British consul-general at Odessa, in his last report on Southern Russia, "mentions that Russia already ranks sixth among the wine-producing countries of the world, and will probably soon surpass Germany in this respect. The two provinces in the Odessa district which produce the best wine are Bessarabia and the Taurida (Crimea), the former yielding the most as well as the best, but some very good wine is also produced on the imperial domains in the Crimea. The climate and soil of Bessarabia are excellently adapted for the growth of vines. At present sixty different varieties of grapes are cultivated, and the vine covers 216,000 acres in the province. Almost every description of wine is prepared, from a strong red wine resembling Burgundy to a very good hock quite equal in some cases to hocks produced on the Rhine. Such wine is sold by retail in Odessa when three years old at about 1s. a bottle, but can be procured for much less wholesale in casks. Hardly any wine is exported, as there is ample demand in the country for the whole of the wine produced, for a heavy protective duty prevents any competition from abroad."

Persia's Cotton Goods Trade.

A British consular report recently published upon the trade of Ispahan, Persia, during 1894–95 possesses (says the *Times*) "some interest for cotton manufacturers. The consul states that the falling off in the trade in Manchester goods is as much due to the personal deficiencies of local European merchants as to the decline in the exchange. Excessive importations and difficulties concerning carriage have brought about depression in the cotton trade, and at the time of writing there appeared little prospect of improvement. Such business as there is has to a considerable extent passed from European into native hands. It seems that the Persian merchant has been more wide-awake than the European trader, and has found a remedy for the transport difficulty. 'Meanwhile,' in the words of the consul, 'the European sits in his office and complains, utterly oblivious of the fact that he can, if he so wills it, find a way to overcome all the obstacles of carriage and help to open up a very much shorter and less expensive route.' This route the writer himself indicates. It is further observed that Russia is strongly competing with England, and that a new competitor has arisen in Holland. The cotton of Ispahan appears to be the best in Persia, and the local output is rapidly absorbed. As the native merchants now import from their own agents here and in Bombay, and the center of supply for them appears to be Baghdad, only exceptional enterprise and adaptability on the part of European—and particularly English—merchants can maintain the Persian trade in Manchester goods."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The week has brought more favorable weather, which tends to create a better feeling. But trade, except at Baltimore, Minneapolis, St. Paul and Chicago, and to a moderate degree at other points, remains dull and unsatisfactory. The most encouraging feature is the advance in prices of wheat, Indian corn and Bessemer pig iron, the latter being based on the higher value placed on lake ores. While there have been larger sales of dry goods, shoes, hardware, iron and leather at Chicago, business in other lines continues slow. Crop prospects in Iowa are good, and Kansas and Oklahoma producers are holding Indian corn for higher prices. The check in demand for groceries and provisions at the south is due to southern planters having raised larger food crops this year. Heavy receipts of vegetables at southern markets are followed by reports of large crops thereof in sight. San Francisco's exports to Asia have fallen off, but those to Mexico and Central America are the heaviest on record. Portland, Ore., is sending large quantities of lumber to the west coast of South America, and Tacoma, cotton cloth, flour and lumber to transpacific markets.

One of the most unpleasant features is lack of improvement in mercantile collections. This, with the commercial calm at many of the more important trading centers, points to some of the effects of the prolonged period of withdrawal of capital from enterprises in the United States, and to the unwillingness of accumulated domestic capital to seek new ventures at present.

Total bank clearings continue the recent downward movement and furnish the smallest total for some weeks, $897,000,000, or 8 per cent. less than last week, and only 1 per cent. larger than in the fourth week of March, 1895. As compared with the corresponding week in 1894 this week's increase is 20 per cent., and with that in 1893 (more than a month before the outbreak of the panic), this week's decrease is 14 per cent. The falling off as compared with the total in 1892 is 17 per cent., and with 1891, at a time when trade was slack (following the Baring's crash in December, 1890), this week's clearings are 3 per cent. smaller.

Wool in some instances has been shaded in price. Trade in wool is almost at a standstill, aside from a few sales made for export. Foreign dress woolens are higher, the only improvement in the outlook for American fabrics. Additional woolen mills have closed for lack of orders. Raw cotton is lower, presumably on reports of a prospective large crop. The heavy movement of ginghams appears to be the outcome of drives and auction sales, the effect of which on other fabrics is depressing. Large accumulations of white cotton are reported, and Providence bankers state that cotton manufacturers have sought loans there to enable them to carry accumulated stocks.

Exports of wheat (flour included as wheat) from both coasts of the United States this week are only slightly heavier than last week, and far below the usual weekly average—amounting to 1,744,000 bushels, compared with 1,592,000 bushels in the previous week. One year ago the corresponding weekly aggregate was 2,562,000 bushels, two years ago it was 2,966,000 bushels, three years ago 2,875,000 bushels, and in the corresponding week of 1892 it was 2,597,000 bushels. Exports of Indian corn amount to 1,727,000 bushels this week, a small decrease from the week before, three times the quantity sent abroad in the corresponding week a year ago, and about 6 per cent. more than sent abroad two years ago.

Speculation in the New York stock market is stagnant. Quotations are made entirely by professional traders of the smaller kind. A disposition of "shorts" to cover early in the week gave place to renewed bearishness on the prospective passage of the Cuban resolutions by Congress. London has been indifferent to American securities, which were weakened there by the news from Washington. The rise in foreign exchange, which is firm at 4.88½ @4.88¾ for demand sterling, also tends to depress stocks, though exchange is still some distance from the gold point.

Heavy mercantile failures have a temporary effect on trade, and in instances have caused a closer scrutiny of credits and a check on sales and distribution. Only 276 business failures are reported in the United States, compared with 300 last week, but an unusually large proportion of them are of comparatively heavily capitalized concerns. The total number of failures in the week a year ago was 232, showing an increase of 44 this week, while as compared with the week two years ago there have been 30 more failures during the last six business days, and as compared with the week three years ago there have been 106 more.

Snow blockades in the province of Quebec, followed by rain, have left country roads in a condition to continue to check commercial enterprise. At the city of Quebec trade is slightly improved. At Toronto trade is featureless and without activity. Collections are backward, and Ontario country roads nearly impassable. Dullness characterizes business at Halifax, the weather continuing cold, the season backward, and country roads being in poor condition. Favorable advices are received from the Newfoundland sealing fleet, and the expectation in New Brunswick is for more than an average lumber cut. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $16,087,000 this week, against $17,599,000 last week and $15,260,000 in the week one year ago. There are 44 business failures reported from the Canadian Dominion, compared with 40 last week, 49 in the week a year ago, and 27 in the fourth week of March, 1894.

FINANCIAL.

The Money Market.

There has been a relaxation of the close attitude of the banks toward commercial paper this week, though discrimination against notes in some lines of trade is still shown, and interests thus affected have in some cases offered their bills receivable for discount at very high rates. On the other hand, acceptable grades of paper meet with a better buying demand on the basis of 5½ @6 per cent. for best names. The out-of-town demand for paper is better. Time money, on the other hand, is a little less plentiful. The inquiry for it is not large, and is decreased by the prevalent stock market inactivity. Rates are quoted 4@5 per cent., according to time. Call money has been in abundant supply all week at 2½@4 per cent., the general average being 3½ per cent.

The New York Banks.

Last Saturday's statement of averages showed a smaller loss of cash than the actual movement of money from the banks. The loss of specie was put at $2,329,800 and of legal tenders $514,200, a total decrease in reserves of $2,844,000. It is, however, known that about $4,500,000 was transferred from the banks to the Treasury under the call for 20 per cent. of the deposits held by the specially designated banks under the recent government bond transaction, and that the interior movement resulted in the loss of about $1,000,000 more. The other features of the statement were an increase of $999,400 in loans and a loss of $1,751,400 in deposits. The surplus reserve decreased $1,406,150, the figures of the statement comparing as follows with those of the preceding week:

	Mar. 21, '96.	Mar. 14, '96.	Changes.	
Loans	$467,526,300	$466,526,900	Inc.	$999,400
Specie	58,515,300	60,845,100	Dec.	2,329,800
Legal tenders	82,541,900	83,056,100	Dec.	514,200
Deposits	488,058,100	489,809,500	Dec.	1,751,400
Circulation	14,198,000	14,234,800	Dec.	36,800
Total reserve	141,057,200	143,901,200	Dec.	2,844,000
Reserve required	122,014,525	122,452,375	Dec.	437,850
Surplus reserve	19,042,675	21,448,825	Dec.	1,406,150

At the corresponding date last year the surplus reserve was $14,146,500, against $79,077,650 in 1894.

The Boston Banks.

	Mar. 21, '96.	Mar. 14, '96.	Changes.	
Loans	$157,629,000	$157,712,000	Dec.	$83,000
Circulation	9,732,000	9,731,000	Inc.	1,000
Deposits	93,717,000	93,569,000	Inc.	148,000

Silver.

Narrow fluctuations and limited speculation have prevailed in the London silver market this week. There have been no factors of a character to influence the prices, the New York market merely following London.

SILVER PRICES.

	Mar. 21.	Mar. 23.	Mar. 24.	Mar. 25.	Mar. 26.	Mar. 27.
London	31 7-16d.	31 7-16d.	31⅛ d.	31 5-16d.	31⅛ d.	31 3-16d.
New York	68¾c.	68¾c.	68⅞c.	68 5-16c.	68⅝c.	68⅝c.

Foreign Exchange.

Rates have stiffened decidedly since last week, the tone of the market being indicative of a further rise, which, in the opinion of bankers, is likely, if not checked, to result in gold exports at no distant day. The feature of the market was not so much the size of the demand for bankers' drafts as the absence of a supply of commercial bills or of drawings against securities. It would, however, seem that the greater ease with which importers in good credit can obtain accommodation in the money market has had a material effect upon the inquiry. It is also thought that interests which made gold contracts in Europe at the time of the government bond issue are now remitting to close the same.

Posted rates were advanced twice during the week, on Tuesday, when both long and short sterling were marked up ½c.—to 4.88@4.89—and on Thursday, when a similar change carried them to 4.88½ @4.89½. Actual business in demand sterling, which was done at 4.87¾ at the close of last week, advanced to 4.88¼ by Tuesday, and on Thursday was strong on a higher level, with 4.88½ bid. The current figures, it may be noted, are

still about ½c. below the gold-export point. Attention has been naturally attracted to the order issued by the Treasury on Thursday raising the premium required at the Assay Office for gold bars from 1/16 to 3/16 per cent. This is naturally supposed to be in reply to the action of the Bank of England in advancing the price it pays for gold bars to 77s. 10d. per ounce, thereby virtually reducing the gold-export point from this country.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 21.	*Mar.* 23.	*Mar.* 24.	*Mar.* 25.	*Mar.* 26.	*Mar.* 27.
4.87½ @ 4.88½	4.87½ @ 4.88½	4.88 @ 4.89	4.88 @ 4.89	4.88⅛ @ 4.89½	4.88½ @ 4.89½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.87¾ @ 4.88	4.88 @ 4.88	4.88 @ 4.88¼	4.88¼ @ 4.88½	4.88½ @ 4.88¾	4.88½ @ 4.88¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.86¾ @ 4.87	4.86¾ @ 4.87	4.87 @ 4.87¼	4.87 @ 4.87¼	4.87¼ @ 4.87½	4.87½ @ 4.87¾

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¾ @4.89; commercial bills, 4.86½ @4.86¼; francs, 5.17½ @ 5.15⅝; reichsmarks, 95⅛ @95½.

The Bank of England rate remains unchanged at 2 per cent. The bank specie this week decreased £410,000, and its proportion of reserve was 62.13 per cent., against 62.50 per cent. last week. In the London open market call money is easy at ½ per cent. and private discount at 11/16 @¾ per cent.

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending March 20, 1896:

	1896.	1895.
Dry goods	$2,821,241	$2,349,535
General merchandise	6,722,621	6,030,656
Totals for the week	$9,543,862	$8,380,191
Previously reported	112,534,395	112,241,070
Since January 1	$122,078,257	$120,621,261

The total value of exports (exclusive of specie) from New York to foreign ports for the week ending March 24 were $2,240,394 below those of last week. The following table enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$6,304,832	$6,381,174
Previously reported	85,231,273	77,179,510
Since January 1	$91,536,105	$83,560,684

THE STOCK MARKETS.

The New York Stock Market.

Speculation has been at an exceedingly low ebb this week. Public participation or European interest in the stock market are non-existent, and the professional trading, which alone creates fluctuations, has been of the narrowest kind. The growth of a short interest in the absence of positive liquidation acts somewhat as a check upon declining tendencies, and in the early portion of the week covering of bear contracts by professional interests imparted some desultory strength to the share list. In the last two days, however, the market became weaker on the prospect that the resolutions looking to the recognition of Cuban belligerency would be adopted in Congress. This created further depression of American securities in London and gave a bearish tone to the trading here, though by Friday afternoon the market had rallied again in desultory covering. The rise in foreign exchange rates to a point which creates discussion about the possibility of gold exports was also unfavorable to the market, and it is also feared that the Treasury will use the command of the money market afforded by the special deposit of a part of the proceeds of the recent bond sale to tighten interest rates. The actual course of the money market was less calculated to disturb or restrict speculative activity, and the fact that mercantile disasters are confined to certain lines of trade created an impression that business generally would revive with the tardy advent of spring, and be reflected in a better condition of the stock and investment market. Fluctuations have been of an irregular nature, and for the most part within extremely narrow limits. The railroad share list was neglected or subjected to only spasmodic fits of activity, according to the changing impulses of the room traders. Manipulation of the industrials was also slow and unsatisfactory, though Sugar, Tobacco and Chicago Gas may be classed together as the most active stocks of the week.

The granger stocks have presented few, if any, features of interest. St. Paul, after selling ex-dividend down to 73⅜, rallied to 74⅝, while Burlington rallied from 73⅝ to 74¾. Louisville & Nashville was depressed by foreign selling from 50⅝ to 48⅝, but recovered to 49⅞. There was further unsteadiness in the Northern Pacific stocks, the preferred touching 10⅝ on renewed liquidation by holders afraid of the assessment. It afterwards rose again to 12. Reading stock also declined, touching 9⅝ on last Wednesday. Reports were circulated that the arrangements between the coal roads made last January for the maintenance of rates and restriction of anthracite production had been abandoned. This rumor was, however, authoritatively denied.

Among the industrials Tobacco was the only stock subjected to any decided manipulative activity. It sold up to 87¼, although the reports of a pacification of the troubles in the cigarette trade were denied, and the intimations of a dividend have no adequate foundation. Chicago Gas, which went up from 65 to 68, was supported by inside interests, which gave an appearance of truth to rumors of the resumption of dividends. Sugar was put up to 117¼ on Monday, but was drooping all the rest of the week, the pool which created the recent advance in the stock having apparently liquidated.

Boston Stock Market.

[Special to BRADSTREET'S.]

General trading has been more quiet, with railroads fairly steady in price. Chicago, Burlington & Quincy closed 1⅛ point lower, with New York, New Haven & Hartford Railroad 1 point lower, while Atchison closed ⅛ point higher than a week ago. Coppers closed lower, Boston & Montana showing considerable weakness, with a total decline in price of 5¼ points. General Electric lost ½ point, with Sugar ¾ lower on fair trading. Bay State Gas also closes ¼ lower. United States Leather has attracted little attention.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending—*Price* *Mar.* 26, 1896.	*Price* *Mar.* 19, 1896.	*Sales* *Mar.* 26, 1896.	*Sales* *Mar.* 19, 1896.

THE VOLUME OF TRADE.

NO GENERAL IMPROVEMENT, BUT SOME SLIGHT GAIN IN THE IRON AND STEEL INDUSTRY AND PRICES, AND IN QUOTATIONS FOR LEADING CEREALS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, March 27.—The tone has been quiet and the volume of business slow in nearly all departments of the merchandise market. The money market continues quiet. Acceptable borrowers are not very numerous, and the disposition is to turn down all others. Call money yet sells at about 5@6 per cent., with time at 4¾ @6 per cent. The boot and shoe market is showing more activity, from the fact that manufacturers are better supplied with orders. This business has been taken at very low prices as a rule, however, and now manufacturers are working to get their leather cheap enough so that the goods can be made at a profit. Leather is quite steady, and indications are that it will not take much buying to advance prices. Hides are dull, but steady in the face of a small demand from eastern tanners. The iron and steel trade is dull and the tone easier. Lumber is quiet, but with more open weather the prospect is better.

Providence, March 27.—Business remains dull, especially so in the manufacture of textiles. Some concerns in this line propose curtailment. It is reported that some of the cotton cloth manufacturers of Fall River have sought for loans in this market to enable them to carry the large stocks of goods accumulating.

Philadelphia, March 27.—Wool continues without material change, prices ruling firm and sales moderate. Recent large failures of local manufacturers have shaken the confidence of yarn dealers, and a disposition is manifested to scrutinize credits very closely; this is also true in commission dry goods, owing to the failures of prominent out-of-town houses. Spring openings have a tendency to cause increased sales. Drugs are more active. Petroleum continues quiet and prices unchanged; the volume of trade, however, is 10 per cent. higher than the corresponding period of last year. Leather and morocco are very quiet and prices low. The larger factories running about one-third their capacity.

Pittsburgh, March 27.—Business, while not as large as expected with different weather conditions, has been up to the average. Demand for dry goods is not as large as expected, but prices are maintained. Local banks report the expected large demand for money. Collections do not improve, which is probably the worst feature in trade. Some improvement is noted in the iron market and prices are firmer, in one or two lines a little higher. The trade expect the market will show an improvement soon in volume and prices.

Baltimore, March 27.—Trade has been quiet, and jobbers say the comparison with 1895 and 1893 shows a marked improvement in favor of this year. Collections quiet but seasonable.

West and Northwest.

Cleveland, March 27.—Except in leading merchandise lines, the jobbing trade continues quiet and without new features. Weather conditions have improved but little. Collections are unsatisfactory.

Toledo, March 27.—General trade continues to increase in volume over last year, notwithstanding unfavorable weather. City collections are fair, and country very slow and disappointing. Money is reported tight and demand good. Bicycle and kindred industrial lines are running full time and over.

Detroit, March 27.—There is a fairly active movement of general merchandise reported, and while manufacturers are moderately busy, slow collections continue to have a demoralizing effect upon the situation generally.

Chicago, March 27.—There is an improvement in sales of dry goods, shoes, light hardware, bar iron and heavy iron goods, and also in leather, but in other lines dullness and dissatisfaction prevail. Orders are small, and buyers that appeared here in person are also disposed to make moderate-sized purchases. The call for steel rails is good, and one order of 15,000 tons has been placed. There is a disposition on the part of buyers of rails to ask for extended deliveries, but mill men are disinclined to grant them beyond July 1. This is due to the strength in the market for raw materials. Although pig iron is slow, several lots of 1,000 tons and one of 1,500 tons have been placed at former prices, the delivery to run six to twelve months. Southern pig is offered freely at a reduction. Lumber is moving moderately. The produce trade is quiet and shows little change. Wool receipts, 76,739 pounds.

Louisville, March 27.—Weather conditions during the past week have restricted trade. But country buyers are again in the market, and jobbers of dry goods and hardware report satisfactory sales. There is a slight advance in leaf tobacco, the offerings being of better grades.

St. Louis, March 27.—While general trade for the first quarter of 1896 has not been up to general expectations, it is the belief that a majority of other jobbing and manufacturing centers have suffered to a greater extent than St. Louis has, as buyers now operate in this market who were heretofore practically unknown. Transactions in seasonable staples continue of reasonable volume, and in some lines values are firmer. Weather conditions have of late been favorable for the sale of rubber goods. The season, however, has been an unsatisfactory one. Hides are dull and concessions are granted. Produce commission houses are complaining of large offerings and light sales. Pig iron is moving in small lots, few inquiries being for more than 200 tons. Iron and steel are quiet. Some contracts for black sheets have been placed for future delivery. Better prices are expected for galvanized sheets, owing to the advance in Bessemer ore and spelter.

Kansas City, March 27.—Trade in all lines is steady. Collections are only fair; cattle receipts regular, with low values; corn crop in Kansas and Oklahoma still in producers' hands, holding for higher prices.

Milwaukee, March 27.—Dullness seems to be experienced in most lines. Trade is very quiet and collections are unsatisfactory.

Des Moines, March 27.—Wholesale business throughout Iowa is unusually quiet. Collections are fair. General crop prospects good.

St. Paul, March 27.—The improved condition of trade as compared with a year ago, reported last week, shows no diminution, and to lines already especially mentioned may be added harness, leather and hardware. Groceries are also said to move readily. The season has not sufficiently advanced to indicate what may be expected in the way of building, but considerable overhauling is being done, and dealers in paints and oils report sales the best since 1892. As a general proposition, collections appear to be better than last week, though the improvement is not felt in all lines.

Minneapolis, March 27.—Jobbers in most lines report a very satisfactory volume of business, with fair collections. Lumber and flour are quiet.

Duluth, March 27.—Trade is quiet, waiting for spring opening. Lake carriers are making preparations for a heavy year's business. Charter rates are about the average. The lumber and flour trades are quiet.

Omaha, March 27.—Trade is fairly satisfactory for this time of the year, yet no distinctive movement is noted. Collections are slow.

Sioux Falls, March 27.—Wholesale trade does not improve as expected. Collections are fair and retail trade good for the season.

Southern Cities.

Charleston, March 27.—There is a slight improvement in dry goods, boots and shoes. Grocery dealers report trade very dull. Collections are about the same.

Savannah, March 27.—Wholesale and retail trade are dull. Collections are poor. There is an increase over preceding week in receipts of turpentine and rosin. Shipments of both are about the same.

Atlanta, March 27.—Trade is quiet; collections are somewhat slow.

Augusta, March 27.—Dry goods jobbers report better sales than last week, with fair collections. Groceries and provisions continue very quiet, owing to little demand from country, because planters have, during the past season, made more food crops than for some years. Lumber and mill work in active demand, due largely to greatly increased cotton-mill building.

Jacksonville, March 27.—There is no material change from last week. Vegetables are coming in fast, and reports from the country are indicative of a large crop. Collections are slow.

Birmingham, March 27.—General business holds up to a fair average.

Chattanooga, March 27.—Last week's weather had rather a depressing effect on trade, but there is no material change. Prices of dry goods are a little stiffer, but not thought to be permanent.

Nashville, March 27.—Trade continues quiet, shoes and hardware indicating the most life. Collections are quiet. Money remains rather close. The retail city business is dull, with poor collections.

Memphis, March 27.—General trade is fair and country collections are good.

New Orleans, March 27.—Jobbers report fair trading, considering the necessary interruptions caused by state elections, which take place next month. The sugar market is firm. Stocks are held with confidence. The cotton movement is steady but quiet. There is some demand for rice. The money market is without new features.

Galveston, March 27.—Trade is dull in all jobbing lines. The assignment of the largest dry goods jobbing house in this section will have a temporary effect on business.

Pacific Coast.

San Francisco, March 27.—Little improvement is reported in commercial lines. Wheat is more active; freights dull. Trade with the Orient has fallen off. The largest cargo of goods ever sent from this port to Mexico and Central America was shipped the 26th. Trade with this country is increasing. Collections are slow.

Portland, March 27.—One ship has already loaded with lumber for the west coast of South America, and another has been chartered. The lumber companies are figuring on other foreign shipments. This is a new departure for Oregon mills, their shipments having formerly been made to eastern points and along the coast. Wholesale trade is fair, and a better retail trade is expected. Collections are fair.

Seattle, March 27.—Trade continues very good, with no important features. Milling wheat and flour declined in sympathy with the drop in Chicago. Little wheat is coming to tide water.

Tacoma, March 27.—Local business has a better tone this week, though still quiet, save some activity in dry goods. The Oriental lumber trade is stronger. Eastern shipments at present are light, but since January 1 have been the largest ever made at the corresponding period. Last China ship took a full cargo of cotton domestics and flour, leaving freight on wharf for lack of capacity. Fine weather is stimulating mining and farming interests. The arrival of several colonies of immigrants is reported, with prospect of stronger movement this season.

Canada.

Toronto, March 27.—General trade is quiet and featureless. Stocks of general merchandise are fairly large, and prices are not as firm as could be desired. Wheat and coarse grains are weak. Payments are backward, and country roads in many places blocked with snow.

Montreal, March 27.—No new trade features are noted this week. Snow blockades have been followed by rain, and country roads are in bad condition. There is not likely to be much improvement for a few weeks. Collections are disappointing and travelers find orders light. Quebec reports trade slightly improved and collections somewhat easier. There are excellent prospects of a large maple sugar crop, particularly in the counties of Beauce and Dorchester. This is a growing industry. Several charters have been made between Quebec and Liverpool for opening of navigation at 40s. per standard, and the export lumber trade seems encouraging.

Halifax, March 27.—Very little improvement in general trade is yet manifest. There is little or nothing doing in provisions, and no improvement is looked for until after Easter. Many say that this has been the dullest March on record for the wholesale trade. The weather is backward and cold, and the roads are in poor condition. Reports from the Newfoundland sealing fleet so far are favorable. Advices from New Brunswick state that the lumber cut will be fully up to the average, and perhaps more. Collections, both city and country, are complained of.

Dry Goods.

[Special to BRADSTREET'S.]

The market rules quiet in most departments and operations generally are unsatisfactory. There have been other drives in ginghams, and the auction rooms have been used to clean up supplies of these goods. This has resulted in marketing a large amount of goods at low prices, and its effect on other fabrics is rather depressing. White cotton fabrics are dull and unchanged, with conditions depressed by large accumulations. Some specialties in printed fabrics are yet going well, this class of goods having absorbed a large part of the season's trade. General printed fabrics are slow. Agents have opened fall samples on dress woolens and are booking fair orders. The fact that foreign fall goods have been advanced in price makes it look more favorable for American mills getting a better share of the business. Men's-wear woolens are dull, and many mills are being forced to close down through lack of orders.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Wool.

[Special to BRADSTREET'S.]

Demand continues quiet and local buyers and manufacturers show little disposition to operate. The woolen goods business is very disappointing, and many mills are being forced to close down owing to the lack of orders. Wools can be bought very cheaply compared with the markets in Europe, and manufacturers appear to have no present use for the raw material. Trade is largely at a standstill, and on some wools weak spots are shown, lots being offered several cents below the price six weeks ago. Territory wools have shown most weakness, while ¼ and ⅜ blood unwashed fleeces are also depressed. More sales of territory wools have been sold to go to Europe during the week, one line of 50,000 pounds being reported, while another house is said to have sold equal to 300,000 pounds domestic greasy wool within the past two weeks to go abroad. Foreign wools are firm, but move slow. The bark Siguard, with 8,299 bales, arrived at Boston from Melbourne direct this week, the wool being on manufacturers' account.

THE METRIC SYSTEM.

A late Washington dispatch to the Philadelphia *Ledger*, said: "An interesting report has been made by Mr. Charles W. Stone, of Pennsylvania, in favor of a bill for the adoption of the metric system of weights and measures, which has been for some weeks before the House Committee on Coinage, Weights and Measures. The troy pound of the mint is resorted to as the only source from which to derive the avoirdupois pound for common use, and yet this troy pound, while answering the purposes of comparison in the mint, is of uncertain accuracy. The primary standard of length, the 'three barleycorns, round, plump and dry,' which make an inch, proves but an indefinite guide.

"'The size of our quart, gallon, bushel and barrel is elastic or adjustable,' the report says, 'and depends on the commodity to be measured, the place where it is measured, and formerly in Pennsylvania, at least, the purpose and persons for whom measured. On the statute books of that state may be found an old law providing that all innkeepers "shall sell beer and ale by wine measure to all persons as drink in their houses, and by beer measure to all persons as carry the same out of their houses." Vermont, however, seems to have reached the climax of absurdity, when she provided by comparatively recent legislation, still in force, that in measuring certain specified commodities "one bushel and three-quarters of a peck shall be deemed a bushel."

"'The barrel of oil or cider in Pennsylvania, Ohio and many of the states, according to legal provision, contains 31½ gallons, but in actual fact it contains 40 or 42 gallons. The gallon of milk in New York contains 231 cubic inches, and in Minnesota it is fixed by law at 282. The standard bushel used by the United States in the custom houses and furnished as standard to the various states is 3 per cent. smaller than the standard bushel of Great Britain. The bushel of oats varies from 26 pounds in Maryland to 36 pounds in Oregon and Washington. The bushel of barley weighs 32 pounds in Louisiana and 50 in California. The laws of New York and Oregon make 42 pounds of buckwheat a bushel, while those of Minnesota and Nebraska call for 52 pounds, and Kentucky 56 pounds. The bushel of rye weighs 52 pounds in Louisiana, but grows to 56 pounds in Ohio. Potatoes weigh 50 pounds to the bushel in Washington, 56 in Pennsylvania and 60 in Ohio.

"'In Maine 44 pounds makes a bushel of apples, while 57 are required in Wisconsin. A bushel of salt weighs but 50 pounds in Virginia and several of the states, but reaches 70 in Massachusetts, and brings down the scales at 80 in Colorado.'

"Strong arguments are then advanced in the report for the adoption of the uniform metric system. The simplicity of the system, it says, is one of its great merits. It has but one system for every kind of weight and measure. The method of written expression is the one of ordinary numerical notation. The fundamental unit is the meter, and from that are derived by the simplest process not only measurements of extension, but of weight and capacity as well.

"Referring to the objection that the words and terms of the metric system are foreign and too long for convenient use, the reply is made that the terms are not simply for American use—they are for all nations.

"The ease with which other nations, except France, where vacillating legislation and revolutionary disorders impeded the work, have made the change of systems has been surprising. Germany changed to the compulsory system in two years, Austria in three, and without friction or trouble.

"The conclusion reached by the committee is that the metric system of weights and measures should be adopted by the various departments of the government, although not deeming it wise to change the methods of surveying public lands. They recommend, therefore, that its adoption by the departments be fixed for July 1, 1898, and by the nation at large, coincident with the dawn of the twentieth century, January 1, 1901."

PUSHING TRADE ABROAD.

The St. Louis *Age of Steel* says: "Among the agencies being brought into play to secure the benefit of trade with Japan some recent movements made by both British and German enterprise are deserving of the close attention of American exporters. The plans adopted have the merit of directness and sagacity, and as such would certainly seem to be on the lines of an assured success. Hitherto dependence has been placed largely on the personal representation of foreign houses. The commercial traveler has been the pioneer of trade, and with his abundant supply of suavity and samples, has been the diplomat of commerce. He has, however, his limits, and however impressive a figure he may be in his person and persuasive talents, he can at his best only come in touch with but a small body of consumers. In the building up of a permanent foreign trade the education of the consumer is as necessary as the securing of his good will. The merits of any special product, mechanical or otherwise, are only to be determined by their use. Where the imported article is an innovation it is likely to meet with prejudice, if not actually hostile suspicion and rivalry. If this is true even with the most advanced of progressive and intelligent nations it is naturally much more so with those who by tradition and instinct are stubbornly tenacious in their opposition to change. In the case of Japan this is not so marked as in China, but that it should not exist in a real if but a modified form is too much for even a sanguine and enthusiastic exporter to expect. Nations do not change their customs and preferences easily. Getting out of the old shell is not so much an act as an evolution, nor is the process from without, as in cracking a nut, but from within, as a germinating oak makes a crack in an acorn. Here the education of the popular mind comes in as a vital factor in securing the trade of a hitherto self-sustaining and more or less intelligent people. This generally forgotten fact is being recognized, and as a result we see British enterprise publishing a newspaper at Yokahama in the Japanese language, and Germany coming into line with a similar venture. In the German instance the paper will be edited in Berlin, printed on German presses, and through selected agencies distributed free of charge in Japan. By this means the missionary work of commerce will be carried on among the people, who, after all, are the real arbiters of trade. The consumer is really the monarch of the market, and it is certainly a wise and far-sighted movement on the part of foreign manufacturers to seek to win their patronage by educating their tastes. Trade literature, in this instance, rightly edited and wisely distributed, cannot fail to realize its aims and become a potent factor in the building up of foreign commerce. It certainly deserves the attention of the American exporter."

BRITISH TREATIES AND COLONIAL TRADE.

The British Prime Minister has addressed a letter to Sir Howard Vincent, honorary secretary of the United Empire Trade League, in reply to the memorial presented last month by the council of that body praying that notice might be given denouncing the clause in the commercial treaties with Germany and Belgium preventing British colonies from levying a lighter duty upon British goods than upon foreign goods, should they elect to do so. Lord Salisbury says that "since the accession to office of her majesty's present advisers the question of the trade relations between the mother country and the colonies has been taken into serious consideration, and that he is in thorough accord with the views expressed by Mr. Chamberlain as to the extreme importance of securing as large a share as possible of the neutral trade of the United Kingdom and the colonies for British producers and manufacturers, whether located in the colonies or in the United Kingdom." The letter goes on to add that "while the Prime Minister fully recognizes the inconvenient character of the stipulations in question—stipulations which should never again be agreed to by this country—he is not prepared to give notice for the termination of these otherwise valuable treaties until a definite scheme has been produced offering such probabilities of increased trade within the empire as would fully compensate for the risk involved."

"The council of the league have decided to submit the above correspondence to the governments of all the colonies and dependencies of the empire, and to urge them to send to the imperial government definite propositions of closer trade relations with the mother country. Mr. Lowles, M. P., has undertaken an honorary mission to the Australian colonies upon the subject, and will start without delay. As regards the Dominion of Canada, the same necessity for a special representation on behalf of the league does not arise, as not only is Sir Charles Tupper keenly interested in the question, but Sir Howard Vincent himself has carried mass meetings on the subject in all the large towns from the Atlantic to the Pacific. With respect to South Africa, the present premier, Mr. Cecil Rhodes, and Mr. Hofmeyr are vice-presidents of the league, and are anxious to advance its aims."

*THE CANADIAN PIG-IRON INDUSTRY.**

An English technical journal says: "To review the young and growing Canadian iron industry without 'taking stock' of rival markets is an impossibility in these days of close competition. The American ironmasters especially must be reckoned with, for they have succeeded in displacing the iron and steel producers of Great Britain in the Canadian market, and have now narrowed down the fight for supremacy to a question of the product of American labor as against the product of Canadian labor. The British ironmasters frankly admit that they are out of the fight in so far as the trade of western Canada is concerned. The splendid equipment of the American furnaces, together with their close proximity to the Canadian market, puts the Scotch and English furnacemen at a great disadvantage, and it is an acknowledged fact that the competition for the iron trade of Canada must now and for the future be solely and alone between American and Canadian producers. It has been said that our neighbors to the south 'want the earth,' and if one is to judge by the opinion of so eminent an American authority as Mr. Andrew Carnegie, it would seem that in so far as the Canadian iron market is concerned they imagine they have it. Mr. Carnegie, in a glowing article recently contributed to the *Iron Age*, says they 'have wrested their home market from the grasp of the foreigner, they supply the Canadian market upon equal terms with him, and are beginning to conquer territory which never before was theirs.' The 'foreigner' referred to so aggressively by Mr. Carnegie is the British ironmaster, for no other competitor of consequence, aside from the Canadian, ever fought for the iron trade of these British North American provinces. It is quite true that the British makers have been driven out of the greatest and most desirable portion of this market, and they have been driven out, to a large extent, by American makers. The British ironmaster has passed away, probably never to be reinstated, in so far as the Western Canadian market is concerned, but Mr. Carnegie is mistaken if he imagines that American ironmasters are left in sole possession of the field. If he will glance at the statistics of the imports of pig iron into Canada versus the domestic production for the fiscal year ending 1893–94, he will be convinced that Canadian-made pig iron is making a steady and sure headway. The increase of output from Canadian furnaces for the fiscal year ending June, 1894, was 200 per cent. over that of the fiscal year ending June, 1891; 1893–94 marked an epoch in the history of the Canadian iron industry, because the domestic production for that year, 62,522 tons, meant that Canadian workmen were producing, from purely Canadian material, 58 per cent. of all the pig iron consumed in the country.

"The official statistical year book gives the percentage of home-produced iron to the total consumed as 45.4 per cent., but this is incorrect, inasmuch as the imports group together the following material: Pig iron, iron Kentledge, scrap iron and steel, giving the total as 75,275 tons. The total quantity of pig iron imported for that year was 45,282 tons, the Canadian iron exceeding the importations by 17,240 tons. The statistics down to the close of the last fiscal year, June, 1895, will show, the ebb and flow of trade being allowed for, a proportionate steady advance, and this will still be more marked in the coming year, when it is probable that the output of the new coke furnace at Hamilton, Ont., will be sufficiently large to replace what is now imported from the United States, and to a very large extent may be calculated upon to do so. The value of the pig-iron production of 1893–94 was $965,968.77, and when it is considered that almost nine-tenths of this has been paid out for labor to Canadian workmen, the value of the industry will, perhaps, be better appreciated.

"A continued encouragement of the industry will mean that Canadian pig iron will yet form a base for many articles of finished iron and steel not now produced in the Dominion. It has been said that the production of pig iron is one of the best tests of a country's metallurgical greatness. If so, then, the statistics referred to above evidence the fact that Canada is on the 'right tack.' The Dominion may rank low as yet in the scale of iron-producing countries, but the Canadian percentage of the world's output, though small, is steadily increasing, and must increase if the industry is encouraged as the circumstances of the case demand.

"It is an acknowledged fact that a time of depression in the United States is nearly always followed (generally speaking, a year later) by a period of dull times throughout Canada. The year 1895 has been no exception to this general rule, but, thanks to the moderate dividing wall afforded by our system of protection to native enterprises, we have been preserved from any such panic as the markets of the neighboring republic experienced in 1894. This has been true of all important Canadian industrial enterprises. In the iron department operations have been carried on upon a safe basis. Most of the furnace companies have restricted themselves during the comparatively short campaigns, being wise enough to suit the output to the times. In the face of this the record for 1895 is creditable, and now starting the new year, 1896, with comparatively light stocks at the various furnaces, and with a knowledge that the new 200-ton per day Hamilton furnace can be depended upon for the coming year, it is safe to predict that 1896 will prove the banner year of the iron industry in Canada, so far as the past and present are concerned, and the beginning of a new and more vigorous existence in the metallurgical history of the country.

"The record of some of the Canadian furnaces during 1895 is as follows:

CANADA IRON FURNACE COMPANY, LIMITED—CHARCOAL IRON PRODUCED IN 1895, IN A CAMPAIGN OF NINE MONTHS.

Charcoal pig iron made, tons	6,598	420-2,000
Charcoal consumed, bushels	654,361	
Ore consumed, tons	16,203	
Limestone consumed, tons	1,500	417-2,000

Average number of men employed, 600.

"It may be explained that the operations of this company, involving the work in bog and lake iron ores, and the making of wood for charcoal, extend over a considerable territory. The labor is largely drawn from the farming class, and is therefore naturally of a more or less intermittent nature, which accounts somewhat for the large number of men employed. A portion of the output of the furnace is used for the manufacture of the highest class of railway car wheels, in the company's auxiliary works at Lachine, Que., and St. Thomas, Ont., where a further staff of about 150 men at each works are employed. It is gratifying to know that the high quality of this company's metal, as shown by its great strength and chilling qualities, has so far attracted the attention of foreign engineers that the company have been enabled to open up a foreign trade during the past year, and are now shipping their iron regularly into the Pittsburgh market, where it is used for very special qualities of work. In addition to this, important shipments have recently been made from Radnor Forges to the European market. While this trade is not a large one as yet, it proves that the quality of the iron made in Canada is unsurpassed.

"At Drummondville the campaign was short, but the output will be about the same as 1894. The whole of the production of this furnace is used in the manufacture of car wheels at the company's works in Montreal. The campaign is always more or less regulated by the requirements of the car-wheel department. As regards the Pictou Charcoal Iron Company, Bridgeville, N. S., the returns of output have not yet been filed, but a very notable point in connection with these works is that the company are just on the point of installing a steel converting plant, and will use the largest portion of their material in that way, finishing it into the highest quality of agricultural implement steel for the home market."

* Abstract of paper read by George E. Drummond, Montreal, before the Mining Association of Quebec.

AMERICAN ANTHRACITE IN EUROPE.

The St. Louis *Age of Steel* says: "A vigorous effort is being made to push the sale of American anthracite in Europe. The possibilities of a fair and remunerative trade in this direction are reported as promising. The use of anthracite is increasing yearly both for domestic and other purposes. As we noted some time ago in these pages, the introduction of the American stove would in the long run pioneer the way for the more general use of anthracite. The qualities of this fuel once determined, and its cost giving it a fighting chance in the market, there seems to be but little question that American anthracite will yet become an important factor in our foreign trade. The English product now in the market, however excellent its qualities, is hardly up to the Pennsylvania product, while in the matter of supply the American field is practically inexhaustible. With such resources in reach, and appliances of the most effective and economical kind to develop production, it is reasonable to assume that American energy and enterprise will make the best of its opportunities. That an initial movement in this direction is being made is evident from a press special to a Philadelphia journal. According to this inquiries have been set on foot to collect statistics of coal consumption in France, Holland and Germany, methods and rates of transport, and such data as bears on the general situation. The report says that communications with 2,000 shippers of France, Germany and Holland have been opened to elicit information as to ocean freights, storage capacity of vessels, and other matters relative to the projected enterprise. Samples of American anthracite have already been solicited, and in one instance from an important steel concern. So it seems that the ball is set rolling. The success of the enterprise may not be immediate, and it may not round out as the friends of the movement anticipate, but that it has fair fighting chances of occupying a new market seems to be reasonably assured."

In the United States about 86 per cent. of the total number of concerns failing had $5,000 or less, and 6 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

DIVIDENDS.

WINSLOW, LANIER & CO.,
17 Nassau St., N. Y. City.

THE INTEREST AND DIVIDENDS ON THE FOLLOWING BONDS AND STOCKS ARE PAYABLE AT OUR BANKING-HOUSE ON AND AFTER APRIL 1ST, 1896:

Cleveland and Pittsburgh R. R. Co. Consolidated 4½s.
Cincinnati and Muskingum Valley R'y Co., Coupon No. 34, due Jan. 1st, 1888.
Dunkirk, Ind., Real Estate 6s.
Grand Haven, Mich., Funding 5s.
Pueblo, Col., Water Works 6s. Municipal 6s.
Pittsburgh, Ft. Wayne and Chicago R'y Co. First Mortgage 7s, Series D, Second Mortgage 7s, Series K, Interest Third Mortgage 7s, Quarterly Dividend 1¾ per cent. Special Stock.
April 2d.
Bedford, Ind., Municipal 5½s.
April 3d.
Greenfield, Ind., Municipal 5s.
April 7th.
Pittsburgh, Ft. Wayne and Chicago Ry. Co. Quarterly Dividend 1¾ per cent. Regular Stock.
April 15th.
Pendleton, Ind., Town 6s.
April 18th.
Greenfield, Ind., Municipal 6s.

THE AMERICAN SUGAR REFINING CO.

NEW YORK, March 9, 1896.

The Board of Directors of the American Sugar Refining Company have this day declared the following dividends payable April 2, 1896:

On that portion of the Preferred Stock which is entitled to quarterly dividends 1¾ per cent.

On the Common stock a dividend of 3 per cent.

The transfer books will close on March 16 at three o'clock P. M., and be reopened on April 3.

JNO. E. SEARLES, Treasurer.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

New York Building-Loan Banking Company,

To Bondholders of the Northern Pacific Railroad Company and Holders of Mercantile Trust Company Certificates of Deposit, under the agreement of February 19, 1894.

Under and in conformity with the powers and provisions of the Bondholders' Agreement above mentioned, we hereby give notice that this Reorganization Committee has prepared and adopted a Plan and Agreement for the reorganization of the affairs of the Northern Pacific Railroad Company, and has duly lodged the same at New York City in the office of this Reorganization Committee, and with The Farmers' Loan and Trust Company and the Mercantile Trust Company; and at Berlin and London with the Deutsche Bank.

At each of said places also will be found printed copies of said Plan and Agreement for distribution to Bondholders and Certificate holders.

Dated NEW YORK, March 16th, 1896.

EDWARD D. ADAMS, Chairman.
LOUIS FITZGERALD, Vice-Chairman.
JOHN C. BULLITT,
CHARLES H. GODFREY,
J. D. PROBST,

CHARLES C. BEAMAN, WM. NELSON CROMWELL, } of Counsel.

A. MARCUS, Secretary.

TO THE HOLDERS OF

Northern Pacific R. R. Company's

General First Mortgage Bonds,
General Second Mortgage Bonds,
General Third Mortgage Bonds,
Dividend Certificates,
Consolidated Mortgage Bonds,
Branch Road Bonds,
Collateral Trust Notes,
Preferred Stock,
Common Stock,
AND
Northwest Equipment Stock,
AND
Trust Company's Receipts for the above-described bonds.

New-York, Philadelphia, and Berlin,
March 16, 1896.

Pursuant to the announcement of the Committees, of which Mr. Edward D. Adams and Mr. Brayton Ives, respectively, are Chairmen, a plan has been prepared for an INDEPENDENT REORGANIZATION of the Northern Pacific Railroad System on a basis of fair treatment to all classes of security-holders, and of fixed charges on the reorganized property reduced to an amount believed to be well within its demonstrated earning capacity. This plan has been prepared by the Reorganization Committee, with our joint approval and coöperation, and, in conformity with an arrangement with the Committees, we have undertaken to act in carrying it into effect.

In addition to the two Committees above named, the plan also has received the approval of the representatives of a majority of each issue of the mortgage bonds upon which the reorganization is based.

The conversion of the General First Mortgage bonds upon the terms set forth in the plan is recommended by Messrs. J. P. Morgan & Co., August Belmont & Co., and Winslow, Lanier & Co., who originally issued those bonds, as well as by the German Committee of General Flrst Mortgage Bondholders.

All holders of the above-described bonds, notes, and stocks, are notified to deposit the same as required by said plan.

Securities not so deposited will not be entitled to participate in the benefits of the reorganization.

Holders of receipts of the Mercantile Trust Company of New York for Bonds deposited under the existing Bondholders' Agreement of February 19, 1894, are invited, with the least possible delay, to signify their approval of this plan by producing their existing receipts at one of our offices, in order that we may stamp such approval thereon. Under the terms of the plan, the Managers have the right, which at any time hereafter, in their discretion, they may exercise, to exclude from the plan any holders of such receipts who shall not conform to the request to present their receipts for stamping, as expressly assenting to the plan.

Copies of the agreement and plan of reorganization are now ready for distribution, and all security-holders are invited to obtain them from us, as all depositors are bound thereby. They set forth in detail many features which are of much importance to security-holders.

We believe that the prompt consummation of the plan will result to the best interests of all security-holders, and will place this vast property on a sound and conservative basis.

FINANCIAL.

Any further information connected with the reorganization, which may be desired by security-holders, will be furnished on application at any of our offices.

Holders of the bonds issued by the following Companies are requested to communicate with Messrs. J. P. Morgan & Co., New York, or with the Deutsche Bank, Berlin, giving the amount of their holdings, and stating whether held in bonds or certificates of deposit:

Central Washington Railroad Company.
Cœur d'Alene Railway and Navigation Company.
Duluth and Manitoba Railroad Company (Minnesota Division).
Duluth and Manitoba Railroad Company (Dakota Division).
Helena and Red Mountain Railroad Company.
James River Valley Railroad Company.
Northern Pacific and Montana Railroad Company.
Northern Pacific and Manitoba Railway Company terminal bonds.
Seattle, Lake Shore and Eastern R. R. Company.
Spokane and Palouse Railway Company.

In order to deal equitably with the holders of these Branch Bonds, it is deemed necessary to consider each case separately, and upon its own individual merits.

After hearing from a large proportion of each class of these bondholders, steps will be taken to arrive at some fair basis of adjustment, for which General Lien 3 Per Cent. Bonds and new Preferred Stock Trust Certificates have been reserved under this plan.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 4, 1896.

A report criticising certain provisions of the customs administrative bill now before Congress was adopted by the New York Chamber of Commerce this week. The provision to which objection is made in the report is to the effect that if the appraised value of any article of imported merchandise subject to an ad valorem duty, or to a duty based upon or regulated in any manner by the value thereof, shall exceed the value declared in the entry, there shall be levied, in addition to the duties imposed by law on such merchandise, an additional duty of one per centum of the total appraised value thereof for each one per centum that such appraised value exceeds the value declared in the entry. The report holds that some allowance should be made for an honest difference of opinion between the appraising officers and the importer, as has been the case hitherto, a difference of ten per cent. being allowed before any fine or penalty could accrue. It is recommended in the report that a difference of six per cent. should be allowed before a penalty should accrue, and that no penalty should accrue when the general appraisers are satisfied as to the integrity of the invoice, and that the invoiced price is the actual price at which the goods were purchased, although in their opinion the market value should be higher.

The report further suggests the amendment of the provision of the bill requiring that a sample of the merchandise be attached to the notice of protest filed with the collector. It is pointed out that disputed questions as to proper classification for the purpose of determining rates of duty may arise in reference to many bulky articles; that it would be impracticable to attach such samples to a notice of protest, and that, in fact, in a short time a separate building would be needed to hold them, in addition to the injustice of compelling the importer to take from his stock what might be an important feature of it, and wait for one to three years for a final determination of the question. The report recommends that the provision criticised be stricken out, as also that providing for the exaction of a fee of $2 on each protest and that making the decisions of the general appraisers as to questions of rates of duty final as to facts, and allowing the importer to appeal to the courts only on questions of law.

Hearings upon the Greater New York bill have been begun in the several cities to be affected by its provisions. So far the most notable expression of opinion in reference to the measure has come from President Seth Low, of Columbia University, who, it will be remembered, was formerly mayor of Brooklyn. He declared that he believed in the consolidation of the three cities concerned, without any very strong feeling as to the more sparsely settled area that is also covered by the pending bill. He said that he was willing to assume that so far as the territorial scope of the bill was concerned, there was no necessity for resisting its enactment into law. On the other hand, he believes it to be a radical defect in the proposed legislation that it enacts consolidation as a fact at a fixed date in the future, without reference to the scheme of government that may be prepared for the greater city that will be created by the consolidation.

Reference has been made in these columns to the House bill providing for the creation of a special commission on highways, the general purpose of which is to inquire generally how the government may best promote the improvement of our roads. As has been said, the public generally have manifested an unusual amount of interest in this bill, and letters and telegrams indorsing the measure have come from all parts of the country. The interest thus manifested in the bill has not been without effect in Congress, as is shown by the action taken in reference to it by the House Committee on Agriculture, which this week ordered a favorable report upon the measure.

It is not an unusual thing to see reports embodying the results of investigations into criminal statistics from which, on the basis of an increase in the number of convictions in a given state, an increase of crime is inferred. An instance of this is found in press accounts of the annual report of the secretary of state of New York on criminal statistics. It should be recollected, in considering figures of this kind, that the number of convictions under any criminal system depends not only on the number of crimes committed, but also on the extent to which detection has waited on the commission of the offenses, and the energy which officials charged with the prosecution of offenders have displayed in the discharge of their duties. It is quite conceivable, for example, that there might be a decrease of crime though there might be an increase in the number of convictions, owing to a more thorough enforcement of the law, and it seems to be more sensible to take this view of the matter than to regard an increase of crime as going on side by side with more vigorous development of the machinery of the criminal law, as some statisticians appear to do.

Advices from Washington indicate that the policy of reciprocity is favored by many of those to whom the sub-committee of the Ways and Means Committee on reciprocity and commercial treaties sent circulars of inquiry recently. The policy seems also to find favor among the members of the majority in the House of Representatives, and it seems not unlikely that they may unite in support of a measure aiming at the establishment of the principle of reciprocity in the commercial relations of the United States. A resolution has already been introduced in the House calling for the creation of a reciprocity commission, which shall devote its attention to the work of originating and perfecting trade treaties with European powers and the governments of the western hemisphere. The resolution calls for the appointment of five members, of whom one member is to be appointed on account of distinguished diplomatic or consular service, one on account of experience in the administration of the customs laws of the United States, and three because of their experience in commercial and manufacturing affairs.

The future of the Bureau of American Republics was the subject of consideration at a meeting of representatives of the United States and of the Latin-American republics at the State Department this week. The existing status of the bureau was set forth, and it was explained that the bureau had nearly exhausted all the work outlined for it in the original plan, and that there was need for further direction from the controlling body regarding future work. Secretary Olney was authorized to appoint a committee of five to take the subject under advisement, and to present to the conference a plan of work for the bureau at the next meeting, which is to be held on the 18th inst.

Washington advices indicate that, although the general direction of the bureau is, in all probability, to be continued under the Secretary of State, the United States advancing the money for its support, and being subsequently reimbursed by the other parties to the agreement, hereafter the other republics will exercise more active control over their interests in the matter. The contemplated accession of Chili, although that country has abstained from participation in the enterprise since its conception, and the reconsideration of the determination of Mexico and Argentina to withdraw from the arrangement, which are announced, have, it is understood, been secured through the efforts of Secretary Olney, who is said to have confidence in creating a better understanding among the American nations than could have been deemed possible heretofore.

Wide attention has been attracted by the Senate bill providing for the creation of a Department of Commerce and Manufactures. Meetings to consider the expediency of the measure have already been held by some commercial bodies, and others are in prospect. The New York Chamber of Commerce has passed a resolution declaring in favor of the measure, and it is not unlikely that similar action will be taken by other bodies. It is probable that when the scope of the measure is better understood the commercial organizations will be more ready to make their opinions in reference to it known.

Secretary Carlisle has arranged to address a mass meeting of the workingmen of Chicago on April 15. The Secretary has been invited to make an address on current financial questions as a conspicuous representative of the sound money idea. His address, according to his own stipulation, is to be entirely free from partisanship, and is to be confined strictly to an exposition of his personal belief as to the system of finance best for the general interests of the country. It is needless to say that the Secretary's remarks will be received with the attention which any remarks of the head of the national Treasury should attract irrespective of his party attachments. The Secretary, in his sound money addresses, has added to his reputation as an expositor of clearness and force, and this fact will add to the interest which would naturally be felt in his address on other grounds.

National bank circulation outstanding on April 1 amounted to $221,227,805, which represents an increase of $4,134,340 for the month and of $13,777,661 for the year ending therewith. The portion of the circulation based on the deposit of bonds amounted to $199,723,005, which represents an increase of $4,674,051 for the month and of $19,875,622 for the year ending therewith. The portion of the circulation based on the deposit of lawful money amounted to $21,504,800, which represents a decrease of $539,711 for the month and of $6,097,961 for the twelve months ending therewith.

THE QUARTER'S BUSINESS FAILURES.

The total number of business failures during the past quarter is so much larger than usual—in fact, so much larger than ever before in a corresponding period—as to challenge attention, particularly when it is recalled that these reports exclude failures of those engaged in agricultural pursuits, in any of the professions, in transportation enterprises, or as employees in mercantile or industrial concerns, or of those engaged in personal service.

Business embarrassments reported refer exclusively to those of individuals, firms and corporations engaged in mercantile or industrial or financial enterprises, in which the "failure" resulted in every instance (except banks) in loss to the creditor; in other words, of those whose actual liabilities were in excess of actual assets.

For the past sixteen years the number of failures, with assets and liabilities, for the first three months have been as follows:

Year.	*No. failures.*	*Total assets.*	*Total liabilities.*
1896	4,512	$35,152,701	$62,513,926
1895	3,812	26,571,132	46,910,443
1894	3,969	26,748,770	49,085,088
1893	3,069	20,160,741	39,424,144
1892	3,207	18,204,044	35,861,749
1891	3,401	22,861,883	44,348,783
1890	3,326	16,982,202	33,814,301
1889	3,569	20,376,798	41,761,696
1888	3,053	17,936,584	34,108,679
1887	3,128	15,063,106	25,591,989
1886	3,302	15,260,630	29,096,446
1885	4,050	19,907,423	41,464,325
1884	3,320	20,465,411	39,047,121
1883	3,189	23,763,828	42,235,535
1882	2,146	15,323,591	29,010,944
1881	1,986	11,983,790	24,167,730

The total number of business failures in the United States during the past three months is 4,512, by coincidence exactly 700 more than in the like quarter last year, an increase of almost one-fifth. The only preceding quarter in which the total number of failures was as large as 4,000 was in 1885, immediately following the panic of 1884, when the total was 4,050. In no like quarter before or since has the number of failures been as large as in the past three months, although in the first quarter of 1894 there were nearly four thousand business failures reported—3,969—compared with which the increase during the past quarter is about one-ninth.

After a year of extreme depression, following the panic of 1893, and particularly after a year in which there was a moderate boom in leading commercial and industrial lines and a general advance in prices, as in 1895, it would have been natural to expect a year with conditions looking to improvement, the outcome of which could, of course, hardly help lowering the commercial death rate.

The most unfavorable feature of the report concerning the quarter's failures is the relatively heavy increase of liabilities compared with gain in number of embarrassments. Thus, while the increase in the latter is 18 per cent. as compared with the first quarter of 1895, and about 11 per cent. compared with the first quarter of 1894, total liabilities, aggregating $62,513,000, are about 30 per cent. larger than in the corresponding period one year ago, and 27 per cent larger than in the like period two years ago. No corresponding period during the previous fifteen years has presented so large a total of liabilities as that the statistics for which are now made public. In the first quarter of 1885, when there were only 4,050 failures, total liabilities amounted to $41,464,000, nearly one-third less.

When totals of failures and of liabilities by groups of states are considered, one is struck by the almost even tenor of the commercial and industrial way pursued by the business community in the New England states this year as compared with last. It is the more noticeable in that portion of the country because of the magnitude of business operations there. Thus, while there were 535 business failures reported in these states in the first quarter of 1895, there are 584 for the past quarter, a moderate increase of indebtedness in the face of a falling off in number of embarrassments is due to a disproportionate number of failures with large capitalization and heavy liabilities.

A similar statement remains true with respect to the territories, whence are reported 77 business failures, against 89 a year ago, and $423,000 of liabilities, as compared with only $336,000 in the corresponding quarter of 1895.

BUSINESS FAILURES IN UNITED STATES AND CANADA FOR THREE MONTHS IN TWO YEARS, WITH ASSETS AND LIABILITES.

* Became a state on January 4.

erate and not necessarily significant increase. The same reflection is suggested by the total liabilities, there being only $6,625,000, as contrasted with $6,456,000 in the first three months of 1895.

Even more conspicuously steady and conservative business development is found in advices from the southern states, which show only 736 business failures, compared with 800 in the quarter one year ago. But this is offset by $8,173,000 of liabilities, as contrasted with $7,639,000 last year. The aggregate liabilities of the larger number of concerns embarrassed amount to only $6,725,000, compared with $7,241,000 in the corresponding period of last year.

Business failures on the Pacific coast, while they have shown a heavy increase as to numbers—405 as compared with 304 last year—give evidence of being largely composed of small concerns, inasmuch as aggregate liabilities for the quarter are only $2,558,000, compared with $2,423,000 in the first quarter of last year.

The northwestern states also show a large gain in number of commercial embarrassments, the total being 475 for the quarter, compared with 344 a year ago, but

It is when we come to records from western and the middle states that increases, not only in number of embarrassments, but in aggregates of indebtedness, become striking. The western states, as given in an accompanying tabular exhibit, show an increase of the number of failures of more than 45 per cent., 1,205 compared with 830 a year ago, but with respect to liabilities the increase there is more than 200 per cent., $16,905,000 as compared with $5,336,000. The states of New York, New Jersey, Pennsylvania and Delaware report 1,030 business failures, against 910 a year ago, an increase of only 13 per cent., but they furnish $21,102,000 of indebtedness for the first quarter of 1896, against $17,445,000 in the like quarter of last year, an increase of 24 per cent.

In New York city alone the total number of business failures by quarters jumped from 165 last year to 258 this year, about 50 per cent., but the total liabilities increased from $4,924,000 to $8,398,000, nearly 70 per cent.

The total number of business failures in the Dominion of Canada is 781, exactly 200 more than in the first quarter of 1895; 83 more failures are reported from the province of Ontario, but the total of liabilities there is smaller this year than last. The Province of Quebec reports 119 more failures this year and a total of liabilities more than twice as large as in the first quarter of 1895. Only 4 failures are reported from Newfoundland since the first of January, compared with 29 in the corresponding period last year.

TREASURY OPERATIONS FOR THREE QUARTERS.

Treasury statistics for the month just closed show a net increase in the debt for the month of $5,274,782. The bonded indebtedness increased during March to the amount of $14,788,970, and the non-interest-bearing debt showed a decrease of $579,477. On the other hand, the Treasury cash balance showed an increase of $8,934,741. The figures show a net total debt, less the cash balance in the Treasury, amounting to $942,342,253. The gold reserve is put at $128,646,460, an increase of over $4,600,000 for the month. The net silver holdings show a small net increase as compared with a month ago.

The government receipts for the month of March amounted to $26,041,149, which represents a slight decrease as compared with the preceding month, but an increase of over $500,000 as compared with the corresponding month of last year. The expenditures, on the other hand, amounted to $27,274,993, which represents an increase of over $400,000 as compared with the preceding month, and of over $1,500,000 as compared with the corresponding month of the preceding fiscal year. The customs receipts seem to have been a disappointment to the Treasury officials.

For the nine months ending with March the government receipts aggregated $250,609,840, which represents an increase of over $14,200,000 as compared with the corresponding nine months of the preceding fiscal year. Of this total $126,966,299, or more than half, were from customs, while internal revenue supplied $110,404,144, and miscellaneous receipts amounted to $13,239,397. The expenditures for the nine

months amounted to $269,360,542, which represents a decrease of over $3,500,000 as compared with the corresponding period of the preceding fiscal year. Of the expenditures the largest item was for pensions, the amount expended for which was $105,251,816. The expenditures for the nine months show an excess of more than $18,700,000 over the receipts. As compared with the corresponding period of the preceding fiscal year, however, a gain is shown, in that the excess of expenditures over receipts is reduced nearly one-half, the excess of expenditures over receipts on April 1 last year amounting to over $36,500,000. As compared with the first three quarters of the fiscal year ending in June, 1894, a still more striking gain is shown, the excess of expenditures over receipts for that period amounting to over $55,000,000.

MARCH BANK CLEARINGS.

March bank clearings totals are not encouraging, showing only a small increase, 2.2 per cent. over March a year ago, though measured by the poor trade reports of the past few months, the fact that they show any gain at all might be regarded as, in some measure, a cause for congratulation. Next to the small gain shown over a year ago, the principal feature of the March exhibit is the marked irregularity in returns from different sections of the country. For instance, by far the best showing and the largest number of increases are reported from the south, the central west and middle states sections making the next best reports. The southwest and the New England states, on the other hand, make the poorest returns. In fact, these two groups show decreases in March this year from a year ago.

The total clearings at 68 cities for the month of March aggregate $4,108,200,489, a gain over February this year of only sixtenths of 1 per cent., an increase over March last year of 2.2 per cent., but a decrease from January this year of about 10 per cent. Compared with March, 1893, the falling off is almost 24 per cent.

The showings made by the various groups of clearing house cities during March and the first quarter of the year compare with a year ago as follows:

	Year	*Jan.,*	*Feb.,*	*March,*	*Three mos.*
	1895.	1896.	1896.	1896.	1896.
New Engl'd.	Inc. 14.3	Dec. 2.5	Inc. 12.9	Dec. 1.5	Inc. 2.2
Middle	Inc. 21.4	Inc. 6.8	Inc. 25.3	Inc. 3.0	Inc. 10.8
Western	Inc. 7.8	Inc. .3	Inc. 4.5	Inc. 4.0	Inc. 2.8
Northwestern	Inc. 6.8	Inc. 3.7	Inc. 8.8	Inc. .2	Inc. 4.0
Southwestern	Inc. 8.9	Dec. 1.8	Inc. 9.1	Dec. 4.0	Inc. .5
Southern....	Inc. 7.6	Inc. 6.2	Inc. 29.7	Inc. 11.9	Inc. 14.6
Far-western .	Inc. 5.5	Inc. 13.3	Inc. 9.9	Inc. 1.1	Inc. 7.2
Totals ..	Inc. 16.8	Inc. 4.8	Inc. 20.3	Inc. 2.2	Inc. 8.4
Canada	Inc. 7.5	Inc. 1.8	Inc. 14.1	Dec. 2.5	Inc. 4.0

As will be seen by the table above given, the largest gain reported by any one group is that of the southern cities, nearly 12 per cent. The heaviest decrease is reported from the southwest, 4 per cent. The New England states show a decrease of 1.5 per cent. and the Canadian cities a falling off of 2.5 per cent. from a year ago. As regards individual gains or losses, the exhibit is, as a whole, irregular, and, in some sections, mixed. Among larger cities showing decreases may be mentioned Chicago, Boston, Philadelphia, Milwaukee, Kansas City, St. Louis and Providence, which report a falling off from a year ago of from 1 to 3 per cent. On the other hand, such centers as New York, Pittsburgh, Buffalo, Cincinnati, Minneapolis, Cleveland, Baltimore, New Orleans, St. Paul and Omaha show gains. The heaviest gain is at Omaha, 26.8 per cent. The two largest southern cities are noticeable for large gains, Baltimore increasing 16 per cent. and New Orleans more than 9 per cent. over a year ago. Other considerable gains are those of Pittsburgh, 15 per cent.; Cleveland, 12 per cent.; Columbus, 11 per cent.; Hartford, 14 per cent.; Indianapolis, 9.5 per cent.; St. Paul, 9.8 per cent., and Minneapolis, 7.4 per cent. As an example of the irregularity of returns, it may be mentioned that Montreal shows a decrease of 13.6 per cent., while Toronto shows an increase of 16 per cent. The gain at New York city is 3.3 per cent. for the month, while outside of New York city the gain is only nine-tenths of 1 per cent.

For the three months' period the heaviest gain shown by any group is that reported from the southern cities, 14.6 per cent. Other large gains are the middle states cities, 10.8 per cent., and the far-western cities, 7.2 per cent. The gain at all the United States cities is 8.4 per cent., while the gain at all Canadian cities is 4 per cent.

BANK CLEARINGS AT 87 CITIES FOR MARCH, AT 82 CITIES FOR THE MONTH AND FOR THREE MONTHS THIS YEAR AND LAST, AND AT 76 CITIES FOR FOUR YEARS.

RECENT CONSTRUCTIONS OF THE INTERSTATE LAW.

Two important decisions interpreting the Interstate Commerce law were rendered by the federal court of last resort this week. One of these decisions was handed down in what is known as the "Import Rate Case," which involved the subject of rates upon freight imported at the Atlantic seaports and destined for points in the interior. The controversy originally arose out of the complaint of commercial bodies at the seaboard cities that the railroads, by taking imported freight at less than domestic freight, discriminated against the products of the country. The Texas Pacific Railroad Company set up in answer to the complaint that if it did not accept the import traffic at the joint ocean and rail rate, which, it admitted, was less than the rate charged by it for carrying domestic freight from New Orleans to San Francisco, it would lose the business altogether, for it would go via the Isthmus, the Horn, or Canadian Pacific road, without in the least benefiting the port or people of New Orleans, and without affecting the traffic in the least, because San Francisco merchants bought in the old country and were not interested in the route of shipment. The Interstate Commerce Commission ruled that imported freight transported to any place in the United States from a port of entry or place of reception, whether in this country or in an adjacent foreign country, is required to be taken on the inland tariff governing other freights. This position of the commission was sustained by the federal courts in the second circuit.

The Supreme Court of the United States, however, has now reversed the decisions of the subordinate federal courts and overruled the order of the commission. In its opinion, the court declares that the facts set up by the defendant railroad would seem to constitute "circumstances and conditions" worthy of consideration, when carriers are charged with being guilty of unjust discrimination, or of giving unreasonable and undue preference or advantage to any person or locality. The position of the commission was that it was not competent for the commission to consider such facts—that it was shut up by the terms of the act of Congress to consider only such "circumstances and conditions" as pertained to the articles of traffic after they had reached and been delivered at a port of the United States or Canada. In this position the court held the commission to be in error, saying that it could not be supposed that Congress, in regulating commerce, would intend to forbid or destroy an existing branch of commerce of value to the common carriers and to the consumers within the United States.

Express language, the court said, must be used in the act to justify such a supposition. So far from finding such language, it read the act in question to direct the commission, when asked to find a common carrier guilty of a disregard of the act, to take into consideration all the facts of the given case—among which are to be considered the welfare and advantage of the common carrier, and of the great body of the citizens of the United States, who constitute the consumers and recipients of the merchandise carrier; and that the attention of the commission is not to be confined to the advantage of shippers and merchants who deal at or near the ports of the United States in articles of domestic production. Undoubtedly the latter are likewise entitled to be considered; but it cannot be conceded that the commission is shut up by the terms of interstate law to solely regard the complaints of one class of the community.

Among other things, the Supreme Court interpreted the position of the commission as assuming that it was its duty to so construe the Interstate Commerce law as to make it practically coöperate with what is assumed to be the policy of the tariff laws. The court declares as to this point that its reading of the act does not disclose any purpose or intention on the part of Congress to thereby reinforce the provisions of the tariff laws. These laws, the court says, differ wholly in their objects from the law to regulate commerce. Their main purpose is to collect revenues with which to meet the expenditures of the government, and those of their provisions whereby Congress seeks to so adjust rates as to protect American manufacturers and producers from competition by foreign low-priced labor operate equally in all parts of the country. The effort of the commission, by a rigid general order, to deprive the inland consumers of the advantage of through rates, and to thus give an advantage to the traders and manufacturers of the large seaboard cities, the court says, seems to create the very mischief which it was one of the objects of the act to remedy. The net outcome of the review of the case by the federal court of last resort is, it will therefore be seen, to maintain the conditions against which the seaboard commercial bodies complained.

In another decision rendered by the court, the action of the commission in disposing of a case involving the construction of the long and short haul clause of the interstate law was sustained. This case grew out of a complaint of a buggy manufacturing company against the Cincinnati Southern, the Western Atlantic and the Georgia Railroad companies, that they charged the same rate for transporting buggies from Cincinnati to Augusta, Ga., 645 miles, as from Cincinnati to Atlanta, 474 miles, and 30c. more a hundred on buggies to Social Circle, between Atlanta and Augusta, than to either of the other places. It was also charged that the rate of $1.07 to Atlanta was excessive as compared with the same rate to Augusta, 171 miles longer haul, and that the charge of $1.37 to Social Circle was both excessive and undue. As to the latter rates, the railroads claimed that the goods were not carried to that point under a common control, management or arrangement for continuous carriage or shipment, but that the additional 30c. per hundred pounds was the local charge for similar service by the Georgia Company, and that, therefore, the case of goods carried to Social Circle was not within the provisions of the act. The Interstate Commerce Commission ordered the railroads to make the rates on goods no more to Social Circle than to Augusta, and on the articles in question the commission fixed the rate from Cincinnati to Atlanta at $1 a hundred.

The subordinate courts sustained the commission except as to the matter of fixing the rates. The Supreme Court declared that the companies, by entering into the carriage of foreign freight, by agreeing to receive the goods by virtue of foreign through bills of lading, and to participate in through rates and charges, thereby became part of a continuous line for the continuous carriage or shipment from one state to another, and amenable to the federal act in respect to such interstate commerce. Having elected to enter into the carriage of interstate freights, and thus subjected themselves to the control of the commission, it would not be competent for the companies to limit that control, in respect to foreign traffic, to certain points on their roads and exclude other points. The court held, however, that there is no provision in the act that expressly, or by necessary implication, confers the power to fix rates on the commission, and that the power to pass upon the reasonableness of existing rates does not imply a right to prescribe rates. The reasonableness of the rate in a given case, the court said, depends on the facts. The function of the commission is to consider these facts and give them their proper weight, and if the commission, instead of withholding judgment in such a matter until an issue shall be made and the facts found, itself fixes the rate, that rate is prejudged by the commission to be reasonable.

PHILADELPHIA MANUFACTURERS AND FREE COINAGE.

The visit of a delegation of Philadelphia business men to Washington some time ago and the interpretation put upon their action there, particularly by the representatives of the idea of free coinage and their supporters, led to a misconception as to the position of the Manufacturers' Club of the city on the Schuylkill. It was loudly proclaimed in some quarters that an alliance had been formed between the Manufacturers' Club, as representatives of the doctrine of protection, and the friends of free silver. Color seemed to be lent to this notion by the fact that one member of the delegation that went to Washington was the president, another a vice-president, another the secretary, and nearly every other member a director or member of the Manufacturers' Club. Many members of the Manufacturers' Club felt restive under the interpretation put upon the position of the club as a whole by the action of some of its members, and as a result a special meeting was called to determine unequivocally the actual position of the club on the subject of free coinage.

This meeting was called in Philadelphia on Monday last, and was largely attended. The gathering included some of those who were in favor of such an alliance between the protectionists and the free coinage men as had been predicated upon the outcome of the Washington visit. These members spoke with vigor in favor of their position, which was embodied in a resolution proposed by Mr. Wharton Barker, which declared in favor of "rescuing the people of the United States from such impending danger by removing the difference of exchange between gold standard countries and silver standard countries by the only method possible, which is the free and unlimited coinage of silver at the ratio of 16 to 1 by the independent action of the United States," and in favor of "a tariff which shall be sufficient to equalize the cost of production in the United States and in European and Asiatic countries, and that the protection incident to such tariff shall be equally distributed in every section of the United States, and between the various products and industries of each state."

In spite of a vigorous effort in behalf of this and other substitutes, the club decided against them by a decisive majority, and passed the resolutions prepared by the callers of the special meeting. These resolutions recited that false and misleading reports had been spread broadcast over the country as to the conference at Washington on March 19 between a number of Philadelphia manufacturers and certain free silver senators who declined to vote for the revenue measure known as the Dingley bill, unless coupled with a free silver coinage amendment; that these reports created the impression that the friends of a protective tariff were willing to compromise the cause of protection by indorsing the free and unlimited coinage of silver at a ratio of 16 to 1, in exchange for additional protection, and that these statements were not only compromising the integrity and patriotism of the Philadelphia manufacturers as individuals, but especially so as members of the Manufacturers' Club. The resolutions went on to declare that, speaking for its members, the Manufacturers' Club emphatically denounced as false the statement made by the friends of free silver that the Philadelphia manufacturers were willing to barter with the silver senators for the free coinage of silver in exchange for additional protection, and expressed the opinion that the question of bimetallism can be permanently settled only through an international agreement, and declared that the Manufacturers' Club was unalterably opposed to the free coinage of silver by the United States alone, firmly believing that such a policy would result in disaster at home and dishonor abroad, and would only operate to place this country upon the basis of silver monometalism. This action should certainly put an end to any misconception as to the attitude of the manufacturers of Philadelphia as a body. As far as the question of free coinage is concerned, they have put themselves in line with the great body of the commercial community, which is against the free coinage of silver under present conditions, first, last, and all the time.

A NEW CONNECTION FOR THE POUGHKEEPSIE BRIDGE.

The history of the Poughkeepsie bridge enterprise might serve as an illustration of the difficulty of developing new lines of communication in sections of the country where transportation facilities are already well established. The bridge and the lines of railroad at either end, which reached out towards the coal fields of Pennsylvania and the manufacturing districts of New England, were built on the idea that, being the most direct route between the two sections, the bulk of the traffic between them would naturally come to it. The early vicissitudes of the companies were sufficient to indicate that this belief could not be realized unless the roads with which it connected had some direct interest in throwing business that way. This was apparently realized when the property was leased in 1892 to the Philadelphia & Reading, and became the connecting link in the attempt to consolidate the interests of the Reading & New England and Boston & Maine roads. The bridge property was reorganized as the Philadelphia, Reading & New England, forming with its leased roads a line of about 167 miles, extending from Campbell Hall, N. Y., to Hartford, Conn.

The collapse of the Reading and the abandonment of the grandiose schemes for a union of interests between that road and the New York & New England and Boston & Maine resulted in leaving the Philadelphia, Reading & New England without close connections at either end of its line. The New York & New England was promptly absorbed by the New Haven, and the bridge and its railroads have been in the hands of receivers, the bondholders being forced to await the outcome of the efforts to reorganize the Reading property, although the outcome of that, as might be foreseen, could only be to make void Reading's guarantee of the Philadelphia, Reading & New England bonds.

The approaching completion of the Reading reorganization has, however, been followed by renewed signs of activity on the part of the interests which control the bridge. The need of an eastern outlet is, of course, most pressing. It is now proposed to carry out a scheme which was considered some years ago, namely, to build a line from Tariffville, Conn., to Springfield, Mass., which would make the latter city the eastern terminus of the bridge route instead of Hartford, and supply it with a connection over the Boston & Albany. On this subject the Philadelphia *Press* says: "Some years ago the legislature of Massachusetts granted permission for the building of the line in Massachusetts, but it was so stipulated that it was to be built and in operation by 1891. As the road was not completed by that time the officials had to secure another permit. This has now been granted, and the time for building the road has been extended to 1899.

"The right of way from Tariffville, Conn., to the Massachusetts line has been acquired and paid for. Now that the company has the right to build the line, there is some talk of an early reorganization of the company, but nothing will be done in this matter until some arrangements have been made with the Philadelphia & Reading Railroad Company in regard to the interest on the bonds which was guaranteed by that company, but which has been defaulted on since the Reading Company has been operated by the receivers.

"The reason that the Philadelphia, Reading & New England wishes to construct this spur is to secure another outlet to Boston, as it now has to depend on the New York & New England or the New York, New Haven & Hartford Company to get into that city. On account of this it is thought advisable to make other connections, and by making arrangements with the Boston & Albany Company considerable business will be interchanged."

"MAKING A MARKET."

Wall street is not unacquainted with the process of making a fictitious market for securities with the object of inducing public investment and speculation therein. In fact, "washing" quotations, as it is technically known, has been reduced to a fine art, and is so generally practiced that it

scarcely attracts any comment. Perhaps the most striking illustrations of it in recent years have been furnished by the so-called "industrials" or "trusts," which, with some honorable exceptions, have been introduced on the stock market and made familiar vehicles for speculative activity by the simple method of starting extensive, and in the main fictitious, trading in their shares.

Some recent proceedings in the English courts, attended by action on the part of the London Stock Exchange, serve to illustrate a view of the English law on such questions, and at the same time afford an example of an evil similar to that which exists here and in the London stock market. It should be noted at the outset that the methods of stockjobbers there, though involving the same principle, differ in detail from our own process of "washed" quotations. Owing to the enormous amounts of idle capital in the London money market and the familiarity of the public with subscriptions to new corporate "flotations," companies of different kinds are brought out directly, and the public is invited to take their shares from the promoters. The object there is to create an appearance of a large demand for the shares, and to have them quoted at a premium in advance of allotment. In many cases, of course, the pressure to obtain a portion of a new issue is so great that a premium is naturally created. In too many cases, however, it would seem that the machinery of the Stock Exchange is used for the purpose of deceiving the public and creating the impression that a new issue commands a premium when it is the result of sheer manipulation, as we would say.

The particular matter in question refers to the Patent Steam Loop Company, which was brought on the market as a corporation controlling valuable patents for economizing fuel and water. The history of the transaction, as described in the columns of the London *Financial News*, was that "when the company came out the promoters endeavored to secure the coöperation of investors by the expedient, too often resorted to, of 'making a market.' Dealings at a premium were effected on the Stock Exchange, and the quotation, verified by properly executed contracts, was in due course communicated to the press. There was nothing at the time to show that these transactions were not perfectly genuine—that they did not represent on the part of certain members of the investing public a disposition to buy the shares at an enhanced value before any allotment had taken place. It was only at a later date that the true facts came out."

It seems that the brokers of the company (a London Stock Exchange firm) received £200 in shares of the new company for the mere use of their names, and in addition underwrote £500 of the stock subscription. One member of the firm, acting, as he claims, without the knowledge of his partners, then bought a number of the shares (in advance of issue), paying a premium for them, and giving the "jobbers" from whom he bought them calls on stock at par, so that they were absolutely protected in the matter.

Some time afterwards these transactions came under the notice of the courts. Actions were brought against the Stock Exchange firm, in which the plaintiffs sought to avoid certain agreements, chiefly on the ground that the dealings at a premium were unreal, and, therefore, intentionally misleading, and to that extent fraudulent. In the course of the judgment given by Lord Justice Lopes some very severe remarks were made on the course adopted in "making a market" by the defendant firm. It was said plainly that the parties to these dealings had been guilty of a criminal conspiracy to cheat the public by means of dealings in shares at an artificial premium. That judgment stands good to-day, and the effect of it is that if two or more people use the machinery and methods of the Stock Exchange in order to enter into bogus transactions, and communicate them to the press for the purpose of deceiving the public with the bait of a premium, their conduct amounts to a fraud, which is punishable by the criminal law.

The upshot of the matter was that the London Stock Exchange, in the words of the paper from which the above account is taken, "seeing that a serious reflection was indirectly passed upon the mode of business which had rendered such things possible, took up the matter warmly, and passed a resolution declaring that the firm had been guilty of discreditable and dishonorable conduct. It must be assumed that the committee made due inquiry into the facts, and that it considered there were good reasons for treating all the members of the firm as jointly responsible, although two of them asserted that they were in ignorance of their partners' transactions, and had not been parties to them in the smallest degree." The decision of the committee involved the suspension of all the firm for four years from the Stock Exchange, and, though this action was taken into court, the conclusion of Mr. Justice Bruce was to sustain the Stock Exchange.

NORFOLK & WESTERN REORGANIZATION.

Having passed into the hands of receivers in February, 1895, the announcement of a plan for the reorganization of the Norfolk & Western Railroad Company's system on April 1 of the present year indicates unusually quick work for a task of this magnitude. The fact that such a large proportion of the company's securities are held abroad, and are, indeed, concentrated in a comparatively few hands, was, no doubt, of tangible assistance in this connection. A corporation, however, which boasts of a share capitalization of about $60,000,000 and something like $65,000,000 of mortgage bonds upon its lines, divided between some twenty different issues, presents problems of considerable magnitude, and it is understood that the able and influential committee, headed by General Louis Fitzgerald, which has had the matter in charge have given the matter a prolonged and earnest study, and have secured the practical coöperation of all the principal interests involved in the exchange of securities now proposed, or by the assessments which accompany them in reference to the stock.

The Norfolk & Western plan is not as radical as some other recent propositions of the kind. It, however, provides for a sensible reduction of the obligatory fixed charge on the property and funds, and of the existing mortgage bond issues into new first consolidated 4 per cent. bonds or preferred stock. At the same time the anomaly of having a disproportionate amount of preferred stock is done away with, the $50,000,000 in shares of this character issued by the old company being exchanged into new common stock.

Under the plan the property will be foreclosed and taken over by a new corporation having $23,000,000 4 per cent. non-cumulative preferred stock and $66,000,000 in common stock. Of the old securities the divisional lien bonds, the general mortgage 6s, the New River 6s, improvement and extension 6s, Scioto Valley & New England 4s and Columbus Terminal 5s are left undisturbed—a total of $23,388,200. The new issue of 4 per cent. first consols will be for an aggregate amount of $62,500,000, of which over $25,000,000 will be to provide for the eventual retirement of the undisturbed bonds by purchase or at maturity. Nearly $10,000,000 more of the issue are to be used at the rate of $1,000,000 per annum for accessory improvements and betterments, and a provision is included for the sale of $3,500,000 of these bonds to take care of existing indebtedness. If, however, this amount cannot be sold at a fair price, the company reserves the right to create $3,500,000 4 per cent. prior lien bonds for the purpose.

The disposition of the $23,322,675 of the consolidated 4s and of the preferred and common stocks to be employed in retiring existing mortgage liens and the terms offered in each case are as follows:

	Receive			
	Cash.	*First consol. mtge bonds.*	*Preferred stock.*	*Common stock.*
Adjustment mortgage 7% bonds.	7%	130 %	20 %	...
100-year mortgage bonds	..	62½%	85 %	...
Maryland & Wash. Div. bonds .	..	70 %	67½%	...
Clinch Valley Div bonds.....	..	50 %	70 %	...
Equipment mtge bonds of 1888 .	..	100 %	48 %	.
5% debentures of 1892	..	..	100 %	...
Roanoke & South'n R'y bonds .	..	55 %	65 %	...
Lynchburg & Durham R.R. bonds	..	35 %	65 %	...

Both the common and preferred stocks of the old company are assessed $12.50 per share, on payment of which they will receive, the common 75 per cent. in new common stock and the preferred 112½ per cent. in new common. The Roanoke & Southern and Lynchburg stockholders also pay a like assessment, and will exchange their shares for 75 per cent. of their face in new common. The cash requirements under the plan are $7,437,500, of which $1,525,000 is for the discharge of the floating debt and $3,125,000 for the extinguishment of car trust, there being the usual provision of a syndicate to take the new common stock which may not be taken by the present company's stockholders.

BRITISH INDIAN FINANCES.

The budget of the British Indian government, made public about a fortnight ago, gave very general satisfaction in London, and embodies some features that are not without interest here. The chief point about it is that for the year which closed on March 31, 1896 (the month of March being, of course, estimated), there is an estimated surplus of about 9,500,000 rupees in the revenues of the country as compared with the government expenditures. Allowance is made in the figures for a number of extraordinary expenses, including the cost of the Chitral expedition, and an important step is taken by the financial department in reëstablishing the famine insurance fund, which has been suspended for some years, owing to the financial troubles of the government caused by the depreciation of the rupee and the great decline in Indian exchange. This famine fund, as its name implies, is a provision against those times of drouth and scarcity to which India is periodically subjected. While in late years there have been fewer visitations of this kind, the fact that the government is in position to come to the aid of the affected population is a matter of great moment to the country and its native subject class.

It cannot be said that the budget gives the slightest encouragement to hopes of the reopening of the Indian mints to the free coinage of silver. On the contrary, the indications are that Indian administrators are well satisfied with the course taken in that connection, and consider that, whatever embarrassment the policy in question has entailed, they have avoided far greater and more dangerous disorders which might have been produced had the Indian mint remained open to holders of silver. The fact that the value of the rupee in gold has risen during the past twelve months from 13 5/16d. to 14¾d. is dwelt upon with emphasis, and one of the most favorable features of the budget is the saving of about 11,436,000 rupees in remitting funds to Europe to pay interest on India's gold-bearing securities, the Council drawings realizing an average of 13.68d. per rupee, against 13.09d. per rupee as originally estimated. For the ensuing year the value of the rupee is put at 10.1¾d., a figure slightly in advance of the average realized during the period under discussion, from which it would appear that the Indian administration, while hopeful of a further improvement and a corresponding gain in the surplus, is disposed to take a conservative position in reference to this phase of its financial arrangement for the future. In concluding the budget, Sir J. Westland, the Indian Finance Minister, says: "Last year my final estimate of the position was that, though we were, as yet, far from a complete restoration of our fortunes, we might claim to have made a fair amount of progress towards their restoration. Our prospects are now very much more hopeful; our revenues are advancing, our expenditure is well in hand; but, above all, the rate of exchange shows a tendency to establish itself at a figure which, if maintained, will remove our most serious anxieties. I refrain from any prophecies as to the future; but it is pleasant to know that the direction in which our financial position is changing, which always contains many elements over which we have practically no control, will have to suffer a considerable reverse before we are again in the difficulties which we had to face two years ago."

Another feature is the announcement that a considerable expansion in the railroad system of India is to be inaugurated. This will be accompanied by the adoption of a new policy of placing loans for such purposes in India and thus avoiding the creation of further indebtedness, which, with the interest thereon, must be paid in gold in Europe. On this point the London *Statist* observes: "The Indian government is to be congratulated upon the adoption of a policy that has been urged upon it for years past. The railway system of India is undoubtedly defective, and if anything is calculated to improve the condition of the people, and to increase the trade of the country, it is railway construction. But railway construction in the past has been exceedingly costly, mainly because successive governments have insisted upon raising the money for that purpose in this country. We have urged again and again that the government should look to the Indian rather than to the English market. Of course we have never wished to entirely exclude the English market; that would be an absurdity as well as an injustice. But our advice has consistently been to encourage the Indian investor to put his savings in great public works at home, and to do this by affording him all the necessary facili-

ties. To some extent the government would seem to have at last adopted the policy we have recommended. About 72,750,000 rupees are to be laid out upon 'State' lines, including the East Indian and the Bengal-Assam railways. About 11,500,000 rupees are to be advanced to the Bengal-Nagpur and the Indian Midland for their extensions, and it is announced that there is to be a loan of 4 crores in India itself, which we presume is for the purpose of enabling the government to carry out all these works or adding to funds partly provided for that purpose."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

Total stocks of available wheat on both coasts of the United States March 28 amounted to 94,299,000 bushels (San Francisco, Stockton and Port Costa, Cal., Portland, Ore., and Tacoma and Seattle accumulations west of the Rocky mountains), a decrease of 4,535,000 bushels as compared with the total stocks so held one month before, and a falling off of 7,453,000 bushels as compared with stocks so held on April 1, 1895. Total supplies of wheat afloat for and in Europe on the 1st instant amounted to 50,576,000 bushels, or 4,632,000 bushels less than on March 1 this year, and nearly 10,200,000 bushels less than on April 1, 1895. Total supplies of available wheat in the United States and Canada, Europe and afloat for Europe on or about the 1st of the current month, as shown by reports to BRADSTREET'S by telegraph and cable, amounted to 144,875,000 bushels, 9,176,000 bushels less than were so held one month ago, and about 17,600,000 bushels less than reported on April 1, 1895. A significant feature is that practically the world's supply of available wheat is as small to-day as it was late in May, 1895. In March, 1889, the world's available supplies fell away, in round numbers, about 10,000,000 bushels; in that month in 1890 5,000,000 bushels; in 1891 they increased slightly; in 1892 the falling off was a little in excess of 2,000,000 bushels, while in 1893 there was, again, a small gain during the month of March. In 1894 March stocks of available wheat in the United States, Canada, afloat for and in Europe fell away about 8,000,000 bushels, and almost the same amount during March, 1895, while, as pointed out, last month the corresponding decrease was 9,176,000 bushels.

Ten days ago the technical press reported that the attempt of the steel billet manufacturers to form a pool had failed because of the refusal of three of the most prominent makers to go into it. This, in view of the prolonged depression which had hung over the iron and steel industries, was disheartening, because it appeared to point to the continuance of a ragged market. This explanation of the situation had been no more than thoroughly circulated than the announcement was published that every steel billet plant in the United States had gone into the pool, some twenty-five concerns in number, with an enormous capitalization. One of the members of the combination has stated in print that the plan of pooling the billet industry is only the beginning of the project; that a general steel pool is planned, to be run on much the same lines as that in the steel rail industry. Aside from the rail pool, the last big steel combine was that of manufacturers of beams, which failed a few years ago owing to the withdrawal of the Carnegie interests. The price of billets a week ago was about $17 a ton at Pittsburgh, but Lake Superior iron ore, which was quoted at $2.90 a year ago, has been marked up to $4 a ton, increasing the cost of a ton of pig metal by about $2 per ton, as it takes nearly two tons of ore to make one ton of metal. The advance of about $1 a ton for coke brings up the added cost of the manufacture of steel about $3 a ton, upon which calculation, as explained by one of the members of the pool, the new quotation of $20 per ton for steel billets is based.

No sooner had the so-called pool to include manufacturers of billets, rails, beams and slabs been announced than it was explained by alleged members that no such organization had been effected, but that one is contemplated. A second meeting of some of the best known manufacturers of steel was held at New York city this week, and, whatever the outcome, it may be safely inferred that some sort of a combination exists or is to be formed. Every steel plant in the United States that makes billets to sell is in, or will find it to its interest to be in the pool, and will maintain higher prices. Steel products will, therefore, be higher all along the line. Manufacturers who use their own billets are of little importance as members of the pool, but will benefit by it proportionately quite as much as any other makers of steel, for the cost to them of billets will be no higher, yet they will be able to demand a higher price for finished products.

Pittsburgh advices are that the organization of the combination has progressed far enough to provide that all members pay $2 per ton into the pool on their total output as provided by the agreement, which apportionment of production is expected to be gauged to meet the actual requirements of the market. With a forfeit of $2 per ton on the entire output in the treasury, if any manufacturer should make and sell more billets than allotted to him, makers who suffer from the excess output sold, who find themselves with unsold product on hand in consequence, will receive $2 per ton from the pool for the billets they fail to sell under the amount allotted.

The report of the organization of American manufacturers of steel was followed by another to the effect that a steel trust is to be formed covering the whole world, including American, British, Belgian, French and German makers. The story even included the explanation that representatives of the existing English and continental steel pool and of the newly formed American combination of steel makers are to meet in Paris at an early date. Cable advices, as well as those from among the trade in this country, are that the story of a world's steel trust probably represents the disordered fancy of some market reporter. The secretary of the British Iron and Steel Institute is authority for the statement that no combination of makers of steel in Belgium, France and England with American manufacturers is contemplated.

It is of particular interest to note, in connection with the foregoing, that at a meeting of southern pig-iron manufacturers at Birmingham, Ala., an agreement has been made for the establishment of a common basis of prices, which is another way of explaining that a pool has been formed in that line. Evidently the recent cutting of prices of southern pig had something to do with this action. The combination between southern iron makers is said to include an arrangement to regulate both prices and output, the first step, as announced, being a big clearance sale of stock on hand at low prices. Some among those in interest deny that anything in the nature of an iron "trust" has been formed, but admitted that the agreement between thirty southern pig-iron men, which is declared to include a joint selling agency, is the best they have ever arranged as a matter of self-protection.

The forestry resources of the United States form the subject of a circular recently issued by the Department of Agriculture. It appears from this circular that, in spite of the enormous consumption of lumber, the vast extent to which wood is used as fuel, and the startling annual destruction by forest fires, the forest area of the United States, exclusive of Alaska, is over 500,000,000 acres. This area is very unevenly distributed; seven-tenths are found on the Atlantic side of the continent, only one-tenth on the Pacific coast, another tenth on the Rocky mountains, the balance being scattered over the interior of the western states. The prairie states, with an area in round numbers of 400,000 square miles, contain hardly 4 per cent. of forest growth, and the 1,330,000 square miles—more than one-third of the whole country—of arid or semi-arid character in the interior contain practically no forest growth, economically speaking.

A considerable diversity characterizes the distribution of the forest growth. On the Pacific coast hard woods are rare, and the same may be said of the Rocky mountain region, the growth there being mainly of spruce, fir, various species of pine and cedar. The southern states abound in pine and cypress in their southern section, while their northern portions are covered with hard woods, almost exclusively. The northern states are mainly occupied by hardwood growths, with conifers intermixed, sometimes the latter becoming entirely dominant, as in the spruce forests of Maine, New Hampshire or the Adirondacks, and here and there in the pineries of Michigan, Wisconsin and Minnesota, or in the hemlock regions of Pennsylvania and New York. The loss by fire varies from year to year, but is enormous, especially in the west; probably $25,000,000 annually would not cover it.

Of the various woods classified, white pine ranks first from the standpoint of commercial use, and the other pines next, these being used chiefly for house finishing and other kindred purposes. The general use of oak in the better grade of house finishing and in manufacture of furniture gives that wood next place. Then come the less important hard woods, including ash, birch, maple, etc. Hickory, which is used chiefly for wagon stock, is one of the woods least used, the annual cut reaching not more than 250,000,000 feet, as against 3,000,000,000 feet of oak. Black walnut has now become so scarce that it has practically ceased to be quoted in the lumber market. A small quantity still exists in Kentucky, Tennessee and Missouri, but it is sold by the single tree.

CURRENT BUSINESS NEWS.

Industrial.

A Providence dispatch says that the reduction in wages in a few of the smaller Rhode Island cotton mills is not to be general. The larger corporations deny that a general reduction is contemplated.

The miners of central and northern Pennsylvania soft-coal fields have accepted the 5c. advance offered by the operators.

After a struggle for the recognition of organized labor, lasting five weeks, the strike of the 6,000 Baltimore garment workers was declared off this week. The workers will resume the struggle at "a more propitious time."

A number of union carpenters in Chicago have struck to force the contractors to join in the agreement of the Carpenters' and Builders' Association, granting the men eight hours a day and 35c. an hour. The principal contractors have signed the agreement.

A steel plant which will cost $1,000,000 is to be erected at Birmingham, Ala.

There is but little demand reported for the domestic sizes of anthracite at this time, but the steam sizes are active. The production for April will probably be made 3,000,000 tons, compared with 2,750,000 tons for March.

The sale of American steel rails to Japan, mentioned last week, was of 16,000, not 10,000, tons. The order was taken by the Illinois Steel Company, which will deliver the rails on shipboard at New York. The same company has taken an equally large order from the Grand Trunk Railroad. Both orders were taken in competition with English makers.

From smelter returns for the first quarter of the year the Denver *Rocky Mountain News* predicts a gold production of $30,000,000 for Colorado in 1896.

Four thousand people are reported destitute and suffering at Phœnix City, Ala., caused by the strike at the Eagle and Phœnix Mills in Columbus, Ga. The mills are among the largest at the south, and, including the families of the operatives, there are 7,000 people dependent upon them for a living.

Of 1,771 breweries in the United States 289 are in New York, 251 in Pennsylvania, 174 in Wisconsin, 122 in California and 100 in Illinois. These are the states which have no breweries: Arkansas, Florida, Maine, Mississippi, North Carolina, Vermont and Wyoming.

The British steamship Wansbeck cleared from Philadelphia March 27 with a cargo of locomotives for Libau, Russia, valued at $220,000. The cargo consists of sixteen complete locomotives stowed away in boxes in the hold. They are for use on the new Siberian Railway, and are built to use either petroleum or coal for fuel.

A press dispatch says: "The Niagara Power & Development Company announce that within the next thirty days it will let contracts for the construction of a big power canal from the upper Niagara river at La Salle to the lower river at Lewiston, to cost about $4,000,000. It was also stated that available assets were on hand to warrant the beginning of this stupendous work, by which unlimited power for manufacturing purposes is to be developed. The company is the promoter of the Model City, an industrial site located near Lewiston, and has secured a broad power franchise from the state."

At a meeting of the Titusville, Pa., Board of Trade, March 27, $228,000 was reported pledged toward a proposed fund of $250,000 to induce manufacturing concerns to locate there.

The late developments looking to a steel combination, the *Iron Age* thinks, depend on the demand for rolling mill products. "If it is not large enough the small dependent works must close down, and the finished trade remains where it is with slender returns for the pool. If it is to be large the markets must advance, and the pool will deserve the credit for starting early what would have come of itself. The next few weeks must tell the story."

The Philadelphia Natural Gas Company, of Pittsburgh, have completed their gas line into the West Virginia fields. The officials believe their company "will be able to furnish Pittsburgh with a supply of natural gas equal to that furnished in 1888, when the famous Murrayville field was at its best. Beginning on April 1, new contracts aggregating 5,000,000 cubic feet of gas per day went into effect."

The *Iron Age* says: "Foreign tinplates are rapidly disappearing from our markets. American tinplates have been supplanting them in steadily increasing quantities from the establishment of the tinplate industry on this side of the Atlantic, but not until this year have the effects of domestic competition been very plainly marked. Heretofore, American tinplates have struggled for recognition in many of our trade centers, with foreign tinplates persistently occupying the most prominent place and refusing to be dislodged. Now, however, the situation has materially changed, and American tinplate is in the lead. The great fight for the American tinplate trade is practically over, and henceforth the demand for foreign tinplates will be on the wane."

A Boston dispatch says the Lawrence Manufacturing Company is to reduce its capital stock from $1,500,000 to $750,000, and retire from the business of making cotton cloth and confine itself to the manufacture of hosiery; $750,000 will be returned to stockholders from its cash surplus. The president of the company is reported in an interview to have said: "The Lawrence Manufacturing Company found it could not make money on four-yard sheeting, which it has made for twenty years, because sheeting is made cheaper in the south, and we could not compete with the southern mills.

Commercial.

Directors of the Philadelphia Commercial Exchange have adopted resolutions providing for a committee to secure the equalization of the differential inland freight rate on grain between Philadelphia, Baltimore, Newport News and Norfolk, and urging amendment of the British Board of Trade "load line rules," so as to allow to vessels loading for and at Philadelphia in all seasons the same free board as they would have if they loaded for or at Baltimore, Newport News or Norfolk.

The Delaware and Hudson Canal has been reopened to navigation.

The price of Bessemer pig has advanced $1.25 a ton within two days. Two weeks ago the mills would not buy at $12 a ton. Now there is brisk bidding at $13.75.

The *Winnipeg Commercial* says: "Stocks of Manitoba wheat at lake ports, milling and interior points here now aggregate over 8,000,000 bushels, as compared with about 3,250,000 bushels a year ago. With this large quantity of wheat in sight, and storage full at lake and many interior points, the desire is that deliveries in the country should cease until navigation opens and stocks can be reduced by shipments."

Surveys are being made for a ship canal to join Lake Ontario to the Hudson river. The proposed waterway, to be called the Oswego-Hudson Canal, is projected by the International Deep Waterways Commission, and is to start from Oswego, on Lake Ontario, and be carried through the Mohawk valley to the Hudson river, whereby communication may be had with New York.

It is announced that the Cleveland Steel Canal Boat Company of Cleveland, Ohio, which "last year introduced a system of through shipments by means of steel canal boats between Cleveland and New York," will improve its service this year.

Navigation on the Hudson between Kingston, N. Y., and New York city has been opened.

The *Iron Age* says: "After all, the shipments of southern iron to England or to the continent are governed by freights and by the condition of the domestic markets. It is not frequently possible to make favorable arrangements for transportation, and not always expedient to make the very low prices necessary to capture foreign trade, which must be offered very liberal inducements in the way of a cut in prices to take hold of a new iron. It may be advantageous to work off an uncomfortable surplus by slaughtering distant markets."

The Detroit & Cleveland Steam Navigation Company started a steamer for Cleveland March 30. It was believed the steamer would have no difficulty getting through the ice in Lake Erie.

The following is from the *Iron Age's* market report: "Two weeks ago Bessemer pig iron sold as low as $12, Pittsburgh. Since that time a local interest have bought about 40,000 tons at $12.50, Pittsburgh. To-day, as a result of the coming billet pool, from $12.50 to $13 at Valley furnace is asked, and very little spot iron can be had even at $12.50. Sales have been made up to $12.75 at Valley furnace, and most of the furnaces refuse to sell under $13. If the billet pool is put through it is predicted that Bessemer pig will go to $14 or $15 in a short time."

Financial.

At the annual meeting of the stockholders of the American Bell Telephone Company in Boston, it has been voted to increase the capital stock from $21,500,000 to $23,650,000.

The Ohio Falls Car Manufacturing Company has declared a quarterly dividend of 2 per cent. on the preferred stock, payable in gold.

The New York Clearing House was visited this week by M. de Roulkowsky, "an agent of the Russian Minister of Finance, who is in this country to investigate our bank clearing house system, with a view of its introduction in Russia."

The following securities were sold at auction this week at New York:

100	Shares The Celluloid Company, $100 each	65%
10	Shares Bank of New York, $100 each	237½
8	Shares Ninth National Bank, $100 each	112%
285	Shares Barney Dumping Boat Co., $100 each.	8%
400	Shares Chrysolite Silver Mining Company, $50 each	16¼c. per share
12	Shares Westchester Fire Insurance Company, New Rochelle, N. Y., $10 each	171%
1	Share Clinton Hall Association, $100	$87
21	Shares Murray Hill Bank of New York, $50 each	219
25	Shares Jersey City Packing Company	$80 per share
8	Shares New York & Boston Insurance Company of New York ($75 per share paid in liquidation), $100 each	$8
1	Share Chemical National Bank, $100	411
$8,000	Hecker-Jones-Jewell Milling Company first mortgage 6 per cent. gold bonds, due September, 1922, redeemable after September, 1902, at 110 and interest	99¼
80	Shares United States Fire Insurance Company, $25 each	110½
2	Shares Morris & Essex Railroad Company, $50 each	162
2	Shares Georgia Railroad & Banking Company, $100 each	166½
40	Shares International Rock Plaster Company, $100 each	25
$116,000	Green River Coal & Coke Company first mortgage 6 per cent. bonds (hypothecated)	$5,000
15	Shares Central Trust Company, $100 each	1015
25	Shares National Safe Deposit Company, $100 each	96¼
5	Shares Columbia Bank, $100 each	185
50	Shares Broadway Insurance Company, $25 each	110½
40	Shares Broadway Insurance Company, $25 each	115¼

New York state bankers, composing Group VII of the State Bankers' Association, have passed a resolution urging upon the delegates to the national conventions of both the political parties the necessity of insisting on such action as will secure a plain and unequivocal declaration on the maintenance of the present gold standard.

The enormous resources of the national banks of the United States are shown in the last abstract of their condition, completed February 28, just made public by Comptroller Eckels. The 3,699 national banks had on February 28 $1,951,344,781 in loans and discounts, $192,036,933 in stock and securities, a lawful money reserve of $337,259,922, of which $156,000,000 was in gold, capital to the extent of $653,994,915, surplus fund of $247,178,188, undivided profits of $87,041,526, unpaid dividends of $1,233,515, individual deposits of $1,648,092,868, and bills payable of $20,104,667.

The New York *Stockholder* presents the following table of dividend disbursements for four years on April 1.

	1896.	1895.	1894.	1893.
Bonds	$802,158,333	$702,831,751	$763,296,301	$791,142,451
Interest	20,715,296	18,704,631	18,934,438	21,230,127
Stocks	712,326,335	689,296,335	579,517,374	735,436,845
Dividends	13,951,980	13,186,792	11,598,348	17,747,089
Total disb.	34,667,276	31,891,423	30,552,786	38,977,216

Amounts disbursed by outside corporations will bring the total up to $38,000,000.

The Minnesota Iron Company will pay a quarterly dividend of 1½ per cent., payable April 15. The distribution in dividends will amount to $247,500. The authorized capital of the company is $20,000,000, in shares of $100 each, of which $16,500,000 is issued and paid up.

The Secretary of the Treasury announces that the exchange values of foreign silver coins in the terms of United States currency for the ensuing quarter show a nearly uniform increase over those of January 1, 1896, expressed in mills as follows: Boliviana of Bolivia, 2; peso of Central America, 2; Shanghai tael of China, 4; Kaikwan tael, 4; Tien-Tsin tael, 4; Che-Foo tael, 4; peso of Colombia, 2; sucre of Ecuador, 2; rupee of India, 1; yen of Japan, 3; dollar of Mexico, 3; kran of Persia, 1; sol of Peru, 2; ruble of Russia, 2; mahub of Tripoli, 2. The average price for silver during the three months ending March 31, upon which the valuation of the coins is based, was 62.2c. an ounce.

The Director of the Mint at Washington, from statistics received, estimates the production of gold in Australia during the calendar year 1895 at $44,286,000, an increase of $2,525,000 over 1894.

The American Tobacco Company has declared a quarterly dividend of 2 per cent. on its preferred stock and 2 per cent. in cash and 20 per cent. scrip on its common stock, payable May 1.

Railroads.

The *National Zeitung*, of Berlin, March 19, in commenting upon the Northern Pacific reorganization, makes the announcement that Mr. E. D. Adams will be president of the reorganized company.

The all-rail east-bound shipments of dead freight from Chicago last week were 88,032 tons, against 81,827 tons the previous week, and 60,533 tons the corresponding week of the previous year.

By order of the federal court the Humeston & Shenandoah Railway has been sold to the Chicago, Burlington & Quincy Railroad Company. The price was $2,900,000.

An English contracting firm is reported to be taking over the National Railroad in Tehuantepec on lease, with a contract to repair the road and to improve the ports of Coatzacoalcos and Salina Cruz. The contract involves the expenditure of fully $15,000,000. "A Mexican firm intends to establish a line of steamships on both the east and the west coasts, connecting with the railway, and expects a huge transcontinental traffic, as the route will be much shorter than any other."

The United States Supreme Court has decided in favor of the state in the case of the Louisville & Nashville Railroad Company against the Commonwealth of Kentucky. The decision gives the control of the Chesapeake, Ohio & Southwestern Railroad to the Illinois Central Railroad Company.

The various Pittsburgh traction lines embraced in the new deal, backed by Philadelphia capital, were to go into the formal possession of the new owners April 2. The lines are the Pittsburgh, the Citizens' and the Central Traction companies, the Duquesne Electric system, the Pittsburgh, Allegheny & Manchester Railroad and the Allegheny Traction Company.

The following February gross and net earnings have been reported:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.

Miscellaneous.

The Supreme Court of Illinois has affirmed the decision of Judge Gibbons declaring the Distilling & Cattle Feeding Company to be a trust, and annulling its charter.

The Illinois Supreme Court has declared the law requiring the weighing of coal at mines to be unconstitutional. The act was made to apply to only one class of operators.

Commissioner Stump of the Treasury Immigration Bureau of Washington says that the tide of immigration has again begun to flow from Europe to this country in considerable volume.

Business was suspended at all of the principal commercial and financial exchanges in New York city yesterday (Good Friday). The London Stock Exchange closed Thursday and will not re-open until Tuesday.

Foreign.

The *European Economist* publishes some facts with regard to the growth of population in the various countries of Europe during the decennial period 1885–95. The aggregate increase was 29,922,800. Some states have advanced greatly. For example, Russia added 12,510,800 to her existing population; Germany, 4,522,600; Austro-Hungary, 3,502,200; Great Britain, 2,452,400; Turkey, 1,100,000, and France, 67,100.

In Great Britain and Ireland, from 1889 to 1893, inclusive, some 4,526 strikes occurred. They affected 1,852,193 persons. The successful strikes affected 44.5 per cent. of this total number; the partially successful, 33.9 per cent., and the unsuccesful, 21.6 per cent.

Negotiations for a new Spanish loan have been reopened in Paris and London to secure a sum of £40,000,000, giving as security a lien on the tobacco monopoly. Since the outbreak of the Cuban rebellion in February, 1895, the Spanish government has obtained from the Bank of Spain, the Banque de Paris et du Pays Bas and the Spanish Bank of Havana successive advances on Cuban 5 per cent. bonds of 1890. Before the end of August the rebellion will have cost Spain the sum of £16,500,000. At present the Minister of the Colonies holds only £3,000,000 to keep the war going until August, whereas it is estimated that it will require £1,000,000 a month.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Corporation—Taxation—Maryland Law.

The case of The State vs. The Schultz Gas Fixture & Art Metal Company, recently decided by the Maryland Court of Appeals, was brought to recover a bonus tax levied under the provisions of chapter 536, acts of 1890, of one-sixth of one per cent. upon $200,000, the amount of increase of capital stock the company was authorized to issue. The court held that so much of the act as imposed a tax on the increase of the capital stock of corporations existing prior to January 1, 1890, was unconstitutional, and that the appellee was not liable for the tax of one-sixth of one per centum on the increase of its capital stock.

Railway—Accident—Crossing.

The Supreme Court of Indiana held, in the recent case of Miller vs. Terre Haute & Indianapolis Railway Company, that the Indiana statute which requires certain signals to be given by a railway company at highway crossings does not relieve travelers from all care in approaching such crossings, so as to justify them in a blind reliance upon the fact that the engineer will give warning signals, and that before a traveler can recover for injuries received by collision with a railway train at a highway crossing he must establish the fact that he "looked and listened" as well as he reasonably could in view of all the circumstances.

Railway Consolidation—Purchase.

The question was presented, in the case of The Louisville & Nashville Railway Company vs. The Commonwealth of Kentucky, as to the right of one railroad company to acquire control, either by purchase or consolidation, of the property of another company whose lines are parallel with its own, the Louisville & Nashville and Chesapeake & Ohio Southwestern companies' lines being parallel between Louisville, Ky., and Memphis, Tenn. The constitution of Kentucky, recently adopted, prohibits purchase under such conditions. The Kentucky court granted a perpetual injunction. Upon an appeal to the Supreme Court of the United States by the railroad company upon a writ of error this judgment was affirmed. The United States Supreme Court, as one ground of its opinion, declared that the Chesapeake & Ohio Southwestern, under its charter, had no right to sell to a competing company.

Railway—Negligence—Damages.

The Kentucky Court of Appeals held, in the recent case of Kentucky Central Railroad Company vs. Biddle, that in an action against a railroad company to recover damages for injuries resulting from the act of defendant in carrying plaintiffs past their station and putting them off at the next station, it was error to give an instruction as to punitive damages in the absence of any evidence showing fraud, oppression or aggravating misconduct; that the conductor having failed in his effort to provide a conveyance to take the plaintiffs back to the station at which they should have been put off, by reason of which they were compelled to walk back some three miles to reach the house of a friend, the injuries resulting from the walk were the proximate result of the failure of the train to stop at their station; that while they might have found shelter among the strangers surrounding them, they were not bound to do so, and that an instruction authorizing a recovery for both physical and mental suffering was proper.

Gas—Leak—Explosion—Liability.

The Supreme Court of Indiana held, in the recent case of Consumers' Gas Trust Company vs. Perrigo, that where it was shown that during three years that defendant had owned its gas mains there had been a leak at a point ninety feet from plaintiff's house; that defendant's line walkers had been notified that gas escaped at that point; that gas accumulated in plaintiff's cellar, became ignited and exploded and injured plaintiff; that other gas pipes near the house were examined immediately after the explosion and found free from leaks; that for sixteen days after the explosion enough gas escaped around the former foundation of the house to support many tongues of flame several inches high; that when the defendant's line was uncovered a large leak was discovered, from which gas rushed out with considerable force, and the gas immediately ceased to escape around the foundation, and that the plaintiff, because of the loss of sense of smell, was unable to smell escaping gas, and did not know of its presence in her house, the evidence was sufficient to sustain a verdict in favor of the plaintiff. The court said that the plaintiff could not be expected to know that a leak in a gas main which ran ninety feet from her house, and from which she did not take gas, was a source of danger to her, and her failure to notify the defendant of such leak did not defeat her right to recover.

Employment—Clerk—"Laborer."

The Supreme Court of Georgia held, in the recent case of Oliver vs. Macon Hardware Company et al., that, primarily, a clerk in a mercantile establishment is not a "laborer," in the sense in which that word is used in section 1974 of the Georgia code, even though the proper discharge of his duties may include the performance of some amount of manual labor. If, the court said, the contract of employment contemplated that the clerk's services were to consist mainly of work requiring mental skill or business capacity, and involving the exercise of his intellectual faculties rather than work the doing of which properly would depend upon a mere physical power to perform ordinary manual labor, he would not be a "laborer." If, on the other hand, the work which the contract required the clerk to do was, in the main, to be the performance of such labor as that last above indicated, he would be a "laborer," but, in any given case, the question whether or not a clerk is entitled as a laborer to enforce a summary lien against the property of his employer must be determined with reference to its own particular facts and circumstances.

Married Woman—Conveyance—Fraud.

The Maryland Court of Appeals held, in the recent case of Manning vs. Caruthers et al., reported in the *Daily Record* of Baltimore, that where property is conveyed by third parties to a married woman, and there is no evidence to show that the money with which the property was purchased came from any other source than from the earnings of her husband's business, and he, having stripped himself of all his property, and having made application for the benefit of the state insolvent laws, and having been declared an insolvent without assets, the court will aid his trustee in insolvency to reach the property standing in his wife's name and purchased with his money, so as to subject the same to the payment of his creditors; that the act of 1892, chapter 267, providing that "no acquisition of property passing from the husband to the wife after coverture shall be valid, if the same has been made or granted to her in prejudice of the rights of his subsisting creditors, who, however, must assert their claims within three years after the acquisition of the property by the wife or be absolutely barred," must be construed to be prospective, and not retrospective; that as a general rule a court of equity has jurisdiction to set aside fraudulent conveyances, and that a trustee in insolvency has the power to institute proceedings to vacate such conveyances made by the insolvent, or to set aside deeds made by third parties to the insolvent's wife, when the purchase money was paid by the insolvent in fraud of his creditors.

Railroad—Defective Appliances—Liability

The Supreme Court of Georgia held, in the recent case of Pitts vs. Florida Central & Peninsular Railroad Company, that where an action was brought against a railroad company by one of its employees for personal injuries alleged to have resulted from the negligence of the former in furnishing for the use of the latter defective machinery and appliances, in the use of which, without fault on the part of the latter, he was injured, and a motion for nonsuit was made at the close of plaintiff's case upon the sole ground that, admitting the defendant's negligence, the defect complained of was so apparent and the use of the appliance so manifestly dangerous that the plaintiff knew, or, by the exercise of ordinary diligence, could have known, not only of its existence, but of the danger attendant upon its use, and was consequently himself guilty of contributory negligence in continuing the use of such appliances, in determining whether the nonsuit moved for should be awarded, knowledge of the defect and of the dangerous character of the appliance were both necessary considerations, and even though it might appear that the defect was known to the employee, a nonsuit should not be awarded, unless it further appeared either that the plaintiff actually knew that the continued use of the defective appliance was dangerous, or that the defect complained of rendered the use of the appliance so obviously dangerous as that a person of his intelligence and understanding could readily perceive the danger. The court said that if in such case, upon the question of notice, whether actual or imputed, either as to the defect or the dangerous character of the defective appliance, the evidence were in conflict or inferences therefrom might be drawn favorable to the plaintiff, non-liability of the defendant could not be adjudged as matter of law.

BUSINESS NOTES.

California Orange Crop.

An exchange states that "during the next three months southern California will be engaged in picking its orange crop, which is estimated at 2,800,000 boxes, or two-thirds of a full yield. The crop will sell for $5,000,000, which is an excellent return from an industry only fifteen years old. About $33,000,000 has been invested in the orange groves of southern California. There are in bearing 10,000 acres, and 80,000 more acres are planted."

Financial Condition of India.

At a meeting of the London East India Association, recently, Mr. A. K. Connell read a paper on "The Financial Condition of India and the Closing of the Mints," maintaining "that the true cause of India's financial perplexities was the restless frontier policy which had obtained during the last ten years, side by side with reckless expenditure on railways. He urged the necessity of contracting expenditure. The root of India's financial trouble was to be found in the absence of any really continuous control over India's expenditure, each imperial department promoting its own programme."

Pacific Coast Lumber Trade.

In the opinion of the *Pacific Coast Lumberman*, "lumbermen of the Pacific coast have reason to felicitate themselves over the announcement that after June 30 next rough or dressed lumber will be admitted into New South Wales free of duty. The removal of the duty means much to this section of the country in view of the growing trade with Australia, and no doubt will go far in changing the conditions which are pointed out in a communication from United States Consul Bell. * * * There is no good reason why the Pacific coast should not have the call on the lumber trade of that couutry."

"Smaller Consumption of Flour."

The Minneapolis *Market Record* is responsible for the following: "Wise ones in the trade are now considering the question as to why consumption of flour is smaller this year than usual. They have mostly come to the conclusion that the reason for it is that potatoes are cheaper and that meat is cheaper, and some conclude even that a mild winter may have had considerable to do with the small consumption. Whatever the cause may be, serious mistakes in calculation have been made, or conclusions are true. The latter is probably the case. But leaving out altogether this question of decreased consumption, there still remains the positive condition of decreasing supplies in importing countries."

Lake Erie and Ohio River Canal.

The *Engineering Record* says: "The Board of Army Engineers who have been considering the project of a canal from Lake Erie to the Ohio river have reported adversely to the plan of enlarging the Miami and Erie and Ohio canals to a depth of 7 feet and width of 70 feet. They consider the project feasible as far as engineering is concerned, but do not think a canal smaller than one having 8 feet depth and 85 feet width would be of any substantial use to vessels navigating the great lakes. The cost of a canal open to navigation 275 days in the year for vessels of 280 tons burden was estimated to be, by the eastern route, Cleveland to Marietta, $12,300,000; by the central route, Sandusky bay to Portsmouth, $18,000,000, and by the western route, $23,000,000."

Greater New York.

The register of records in the New York health department estimates the present population of Greater New York as follows:

	U. S. census, 1880.	*U. S. census,* 1890.	*Est'd pop. Mar.* 7, 1896.
Westchester	6,879		
New York	1,206,299	1,515,301	1,916,695
Brooklyn and Kings county	599,495	....	1,105,000
Long Island City	17,129	30,506	42,578
Newtown	9,804	17,549	24,557
Flushing	15,906	19,813	22,496
Jamaica	10,088	14,441	17,765
Brooklyn and Kings county	599,493	....	1,105,000
Part of Hempstead	5,479	....	8,000
Totals	1,929,726	....	3,195,059

The populations of New York and Kings county are as published in the weekly reports of the boards of health. The other estimates are made by the town clerks or based upon registration figures.

Rich Men of Prussia.

A Berlin dispatch says: "Herr Krupp, the gunmaker, is the richest Prussian subject. He is taxed on an income of 7,135,000 marks ($1,700,100). This is nearly half the crown dotation which the Emperor gets as King of Prussia. Baron Rothschild is classed as the second richest subject, with an income of 5,848,000 marks ($1,400,000). Count Hutten-Czapskia, captain of the Fourteenth Hussars, is the third richest Prussian subject, with an income of 3,085,000 marks, upon which he pays a tax of 123,400 marks. Only seven persons had incomes over 2,000,000 marks ($476,000), and only thirteen persons had incomes between 1,000,000 and 2,000,000 marks, compared with eighteen such fortunates in 1895. Those liable to an income tax by reason of having incomes of over 900 marks comprise three-tenths of the population."

At Duluth-Superior.

The Minneapolis *Lumberman* says: "Probably there is as much anxiety at the head of Lake Superior about the opening of the spring trade as in any part of the northern pine field. There is a large amount of lumber massed there for cargo and rail shipment. At the close of navigation there was at the Duluth and Superior mills 225,375,000 feet of lumber, and there was enough immediately tributary, and likely to be marketed at the head of the lakes, to swell the grand total to 300,000,000 feet or more. The docks were well crowded, and apparently there was little room for piling when the mills should start in the spring unless a free rail movement should previously take place, or enough should be sold for early cargo shipment to make room for more before the mills should turn out much of an accumulation."

London View of Trade Here.

The London *Statist* says: "Trade in the United States is bad, and is likely to continue bad. Indeed, the probability is that it will become worse. After the crisis there was a period of a couple of years during which stocks were not renewed. After the passing of the tariff act stocks had run down so low that fresh supplies had to be obtained. That gave an impetus to trade improvement. But the buying has now eased off. The disorder in the currency is as great as ever. All parties recognize that mere borrowing simply puts off the evil day. And the war scares have no doubt had their influence in the United States as well as in Europe. It is true the American people think—and think rightly, for that matter—that no European nation will attack them. But can they be sure that their own government will not rush into an adventurous policy? And the resumption of gold shipments is only delayed; probably in another month or so they will begin again."

British Central Africa.

The *Central Africa Planter* states that the year 1895 has seen a considerable amount of development in British Central Africa. "The British South Africa Company have begun operations; the first Ceylon coffee company was started at Mlanje, and what, for want of a better term, may be called the African Lakes Company railway scheme, has had a preliminary survey of the route made," while two new companies have been floated, "one to take over river traffic and trading and planting business, the other to construct a railway from Maparera to Blantyre. Another railway scheme, to connect Quilimane and Chiromo, has also entered on the survey stage. In coffee the exports for 1895 will at least double those of 1894, and the prospects for next year's crop are of the best. The military operations of the administration have all been brilliant successes. There has not been much activity in the civil administration, and what little has been done has not met with the best reception, especially the road and river tax."

Lynchburg's Shoe Trade.

The Lynchburg *News* says that the four wholesale markets of Virginia, viz., Lynchburg, Richmond, Petersburg and Norfolk, have twelve wholesale shoe houses, which handled, during 1895, 148,927 cases of shoes, "and of this number Lynchburg's quota, with only three wholesale houses, was 67,408, which, as will be seen, is within about 7,000 cases of half of the total number handled by the four combined cities. Furthermore, it will be seen that the increase in the business in Lynchburg last season amounted to over 16,000 cases, or about 33 per cent. over 1894, which is not only a much larger percentage of increase than any other southern city, but is a better showing than is made by any shoe market of prominence in the United States. It is the unchallenged claim of Lynchburg that she receives and distributes annually more boots and shoes in proportion to her population than any city in the country. In fact, there are cities of eight or ten times the population of Lynchburg with a commercial prestige of years whose volume of business in this line does not equal that of this city. The business has grown from 9,647 cases in 1887 to the grand total of 67,408 cases during the past year. This is a remarkable showing."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Stormy weather at the northwest, continued restriction of distribution of staple merchandise and unsatisfactory mercantile collections continue to be the leading characteristics of general trade. The conspicuous change is in the steel and iron markets. The formation of a pool of manufacturers of steel to regulate production and maintain prices results in an advance of $3 per ton in quotations for steel billets and $1.25 per ton for Bessemer pig iron. A corresponding stimulus is given quotations for other forms of iron and steel. Whereas leading metal markets were dull and depressed a week ago, activity is now reported with a prospect for further advances. This must naturally tend to stimulate kindred industries. The movement in steel and iron markets during the next few weeks will attract an unusual share of attention.

Additional favorable features are reports that at Baltimore the quarter's general trade has been the best for years; that there has been a slight increase in the volume of business at Pittsburgh; that at Kansas City distribution of general merchandise is fair (but commission houses admit being overrun with country consignments which are slow of sale), and that demand for dress woolens, autumn delivery, has been sufficient to stimulate manufacturers to buy raw material more freely.

The first quarter of 1896 presents the largest list of actual commercial and industrial failures in business in the United States, those in which liabilities exceed assets, ever reported for a like period. The total (including financial institutions) is 4,512, or 700 more than in a like portion of 1895, 543 more than in 1894, and 1,443 more than in the first quarter of 1893, increases of 18, 11 and of 47 per cent., respectively. The largest preceding like total, 4,050, was reported in 1885. Liabilities of those failing this year amount to $62,513,000, an increase of 30 per cent. as compared with a year ago, 27 per cent. as compared with the first quarter of 1894, and 60 per cent. as contrasted with three years ago.

In addition to advances for iron and steel and products thereof, wheat, Indian corn and granulated sugar are higher, maintaining the tendency of a week ago. Wheat flour, cotton, wool, print cloths and rye are substantially unchanged, but oats, barley, pork, lard, butter and cheese are all lower, as is coffee. The movement of dry goods from jobbers' hands has not improved. Wool is dull and depressed, and some men's-wear mills in New England and in Pennsylvania have closed. Minneapolis, St. Paul, St. Louis and Omaha report less than the usual volume of business, largely the result of the recent storm. Chicago is also affected, and at Cincinnati, Nashville and Louisville business is quieter.

March bank clearings are in contrast to those of February, when the total was 20 per cent. larger than the corresponding total one year ago. The March aggregate is $4,108,000,000, only 1 per cent. more than the total for February, and an increase over the March total a year ago of only 2.2 per cent.; contrasted with March, 1893, the falling off is 24 per cent., while it is 10 per cent. smaller than the total for January, 1896. Most favorable clearings reports are from southern cities. A number of the larger centers furnish smaller totals than in March a year ago, notably Boston, Chicago, Philadelphia, St. Louis. Gains are shown at Baltimore, Buffalo, Pittsburgh, Cleveland, Cincinnati, St. Paul, New Orleans and New York, relatively the heaviest being at Omaha. The week's clearings amount to $952,000,000, an increase of about 6 per cent, over last week, and a decrease of 6 per cent. from the corresponding total one year ago. The increase in the week's clearings over the total in 1894 is less than one-half of 1 per cent.

Exports of wheat (flour included as wheat) from both coasts of the United States this week aggregate 1,693,000 bushels, against 1,744,000 bushels last week, 2,853,000 bushels in the week a year ago, 2,778,000 bushels in the week two years ago, and as compared with 3,635,000 bushels in the like week in 1893. Exports of Indian corn have increased, and amount to 2,199,000 bushels this week, three times what they were in the week a year ago.

The New York stock market shows an improved tone and slightly better prices for railroad shares on the opening of spring and its anticipated effect on business generally. Public interest in the market is still small, and covering by "shorts" has supplied the lack of buying power. Securities of the corn carrying railroads are better on statements that last year's crop is beginning to move. The speculative feature was the extraordinary manipulation of American Tobacco shares accompanying the declaration of a 20 per cent. scrip dividend. Foreign exchange is firm in spite of slow inquiry and the appearance of loan bills. Demand sterling is 4.89, and visions of gold shipments have been current all the week.

Country roadways in the Canadian Dominion continue heavy, and the distribution of merchandise remains slow, notwithstanding summer freight rates are in force. Montreal and Toronto both report a moderate volume of wholesale business, but say the prospect is brighter. No improvement in sales by wholesale houses is reported from Halifax, where provisions and produce are dull and prices low. Advices from the Newfoundland sealing fleet are less favorable. Bank clearings at Winnipeg, Hamilton, Montreal, Toronto and Halifax amount to about $16,500,000, nearly 6 per cent. more than last week and almost 1 per cent. more than in the corresponding week a year ago. Business failures in Canada number 781 for the past quarter, against 581 in the first quarter of 1895, with total liabilities of $5,753,000, against $4,253,000 last year. The Province of Ontario reports 83 more failures this year than in the first quarter of 1895, and Quebec 119 more. Liabilities of failing traders in Ontario, however, are smaller than a year ago, while those in Quebec have doubled.

FINANCIAL.

The Money Market.

The New York loan market is sensitive rather than active, and the recent narrow conditions, particularly in connection with commercial paper, still exhibit their influence. A report that the Treasury would call for another installment of the amount derived from the bond sale, left as a special deposit in the banks here, produced a slight tremor early in the week. It was succeeded later on by intimations that the Treasury might distribute the remainder of the deposit among a greater number of institutions, with the alleged object of releasing the strain on the commercial paper market. The transfer of funds to the interior in connection with the April 1 settlements had very little effect, and the fact that some sterling loans were made also passed without special attention. The demand for funds in speculative quarters is slack, though on April 1 there was some little marking up of standing loans by institutions, the figures, in certain instances, being 4 per cent. The call loan market has, however, been easy on the whole at 3@3½. The demand for time money has been slack at 4@5 per cent. In commercial paper there is rather more doing. The buying demand, however, is not large, and there is still a disposition to pay little attention to anything but the best grades of names at 5½@6 per cent.

The New York Banks.

The statement of averages issued by the Clearing House for the week ending last Saturday showed a further decrease in cash holdings of $2,355,000, made up of an increase of $416,000 in specie, and a loss of $2,772,000 in legal tenders. The item of loans was reduced by over $2,500,000, reflecting the unfavorable condition of the commercial paper market. The decrease of over $5,800,000 in deposits was entirely in keeping with the reduction in cash holdings and in loans, and, as a result of the other changes, the surplus reserve decreased $895,000. The figures of the statement compare as follows with those of the preceding week:

	Mar. 21, '96.	Mar. 28, '96.	Changes.	
Loans	$467,526,300	$454,996,400	Dec.	$2,529,900
Specie	[illegible]	58,931,900	Inc.	416,600
Legal tenders	[illegible]	79,769,400	Dec.	2,772,500
Deposits	488,058,100	482,215,500	Dec.	5,842,600
Circulation	14,198,000	14,216,000	Inc.	18,000
Total reserve	141,057,200	138,701,300	Dec.	2,355,900
Reserve required	122,014,525	120,553,875	Dec.	1,460,650
Surplus reserve	19,042,675	18,147,425	Dec.	895,250

At the corresponding period last year the surplus reserve was $13,413,450, against $83,600,150 in 1894.

Silver.

The silver market is virtually lifeless. There is nothing in sight to affect quotations either way, and the record of the week has been one of trifling changes in prices both in London and in this market.

SILVER PRICES.

	Mar. 28.	Mar. 30.	Mar. 31.	Apr. 1.	Apr. 2.	Apr. 3.
London	31⅛d.	31⅛d.	31⅛d.	31⅛d.	31⅛d.	....
New York	68¼c.	68⅜c.	68½c.	68¾c.	68⅛c.	....

Foreign Exchange.

There has been a decidedly firm tone in foreign exchange all week, despite the slack nature of the inquiry and the appearance of gold-shipping rumors. The buying of bills, in fact, has been somewhat desultory in character, but at the same time there was a marked absence of commercial drawings, while the operations of foreign interests in securities here seemed on the whole to result in an adverse balance. Some few offerings of loan bills made their appearance from time to time, and it is stated that a considerable amount of foreign

money is seeking employment in the market, provided remunerative rates can be obtained. Early in the week it was announced that the London price for gold bars had been reduced 1d. per ounce, the exact amount of the recent advance. This tended to advance the gold-shipping point in exchange, provided, of course, that bars were taken for export, the figure being something in excess of 4.89¼. The shipping point for gold coin of average quality, of course, is somewhat lower, and as the rate for demand sterling was up to 4.89 bid on Tuesday, it was thought that some gold would go out either at the end of this week or the early part of the succeeding one. It is, however, understood that houses which have considered the subject find that there is considerable difficulty in obtaining large amounts of greenback or Treasury notes on which to draw gold from the Treasury. The posted rates for sterling were advanced ½c. on Tuesday—to 4.89@4.90—and the market at the end of the week was firm, though dull, at 4.89 for demand sterling.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Mar. 28.	*Mar.* 30.	*Mar.* 31.	*April* 1.	*April* 2.	*April* 3.

@	@	@	@	@	@
4.88	4.88	4.88	4.88	4.88	----

Closing quotations on Thursday for actual business in other classes of bills were: Cables, 4.89¼; commercial bills, 4.87@4.87¼; francs, 5.16⅞ less 1/16@17½; reichsmarks, 95 3/16.

The Bank of England rate is unchanged at 2 per cent. The bank this week showed a decrease of £1,641,262 in specie, and its proportion of reserve declined from 59.24 per cent. to 62.13 per cent. In the London open market discount is ⅝@11/16 per cent. and call money ½ per cent.

The exports (exclusive of specie) from New York to foreign ports for the week ending March 31, were $1,535,095 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,839,927	$6,329,752
Previously reported	91,536,105	83,560,684
Since January 1	$99,376,032	$89,890,436

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending March 27, 1896:

	1896.	1895.
Dry goods	$2,576,121	$4,024,356
General merchandise	6,881,354	9,640,472

THE STOCK MARKETS.

The New York Stock Market.

A marked change was apparent in the temper and tendency of speculation this week. More confident feelings have taken the place of the depressed sentiments which prevailed only a fortnight ago. The improvement in prices has not been very great, but it is in contrast with the bearish manifestations of the past month. Though the most noticeable movement of the week was again in one of the manipulated industrials—American Tobacco common—the fact that the railroad share list exhibited a certain amount of activity was taken as an indication that the market was getting into a more healthy state. The trading was, however, still professional, and the buying came mainly from the covering of short contracts. Europe and the public are still standing aside, while it would seem that some of the larger interests in the market have again taken their stand on the bull side. The Stock Exchange holiday on Friday here and the extended Easter vacation which London is accustomed to take caused profound dullness on Thursday, but it was unattended by any disposition on the part of the traders to press stocks for sale.

This sudden reversal of speculative conditions is apparently due to the advent of more seasonable weather and its effect, not only upon crop prospects, but on business activity as well. At the same time the fear of interference with business and financial affairs through congressional action in connection with our foreign relations has visibly decreased, and at the same time apprehensions in regard to an extension of current troubles in trade have appeared to be unfounded or exaggerated It may be noted that the utmost efforts of the professional operators failed to create any decided selling movement, and that during the last few weeks every attack on values simply increased the outstanding short interest. Railroad earnings, too, have continued to increase at a generally fair ratio, and there are certain developments which promise to benefit important business interests, notably the new combination of the leading producers of steel. The advance in exchange rates, though accompanied by rumors of possible gold exports, has had no tangible effect, and the continued firmness of mercantile discounts fails to strike the imagination of Wall street as long as call money is 3@3½ per cent. and time money is freely offered for Stock Exchange use at 4@5 per cent. The hoped for indications of improvement in the business situation, in short, seem to have led to an effort by the stock market to discount them to some extent.

The variations in Tobacco stock this week have had no relation to anything in the general market. They were the result of manipulative influences pure and simple, which Wall street, as a body, has no hesitation in ascribing to interests close to the management. It is, indeed, difficult to resist this conclusion, in view of the scandalous action of the directors on Wednesday evening, when it was announced that a dividend of 2 per cent. had been declared on the common shares, plus a distribution of 20 per cent. in 6 per cent. scrip, convertible into stock at the company's option. This scrip is ostensibly declared out of the undivided surplus of $8,600,371 as of December 31, 1895, the company having invested $4,000,000 of its surplus earnings in new property. Considering that on December 7 last the company passed its regular February 3 per cent. dividend on the common, and in view of the general belief that its profits must be seriously reduced by the competition in the trade, this last proceeding is regarded as a piece of managerial stock jobbing. The street promptly compared it to the action of the old National Cordage Company in doubling its share capital on the very eve of the memorable collapse of that concern. If there is any favorable feature in connection with the manipulation of Tobacco it is that its character has been thoroughly appreciated, and that none but the most venturesome traders have taken any part in the movement for some weeks past, the fluctuations, according to common report, being in the main proceeding from the execution of rival orders on both sides. The varying reports about the dividend early in the week were accompanied by further intimations that the trade war was on the eve of a settlement. On these the stock was very irregular at between 85½ and 90⅞. On Thursday morning, after the Wednesday's developments, it opened at 95, but immediately dropped to 89½, rallying a little, and closing at 89¾.

The gyrations of Tobacco checked activity in other industrials. Distillers was strong at times, however, and General Electric advanced to 37½ on the signing of the contract with the Westinghouse Company. Sugar was not a feature, but touched 118.

General Mention.

Holders of Northern Pacific Railroad securities are notified by the reorganization committee, consisting of Messrs. J. P. Morgan & Co., of New York, Drexel & Co., of Philadelphia, and Deutsche Bank, of Berlin, that two-thirds in amount of the bonds, certificates and notes, as enumerated in the announcement, having already accepted the plan and agreement of reorganization, further deposits must be made on or before April 23, receiving certificates of deposit therefor. Deposits after that date, if accepted at all, will be subject to such terms and conditions as may be imposed by the management. For further details holders of securities are referred to an announcement in another column of this paper.

Boston Stock Market.

[Special to BRADSTREET'S.]

The market has shown some fluctuation, with a moderate business. Atchison advanced ⅞ and Chicago, Burlington & Quincy 3 points under good trading, and railroads generally were higher at the close. Boston & Montana has met with good trading and closed ¾ higher. General Electric closes firmer, with Sugar 2 points higher under fair sales. United States Leather has attracted little attention.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE STILL SLOW.

EXCEPT FOR THE INCREASED DEMAND FOR STEEL AND IRON AND FOR STAPLE MERCHANDISE AT A FEW CITIES, BUSINESS SHOWS NO IMPROVEMENT DURING THE WEEK.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, April 3.—The tone of business continues slow for all kinds of merchandise, with trade dull and the market more or less depressed. Money closes with an easier tone and a moderate demand, owing to the quiet state of general business. In the boot and shoe market quite liberal orders have been booked by manufacturers, but at low prices, and they are now interested in trying to force down the price of leather. The latter is yet being taken in a moderate way, but production is being still further curtailed, but few hides being now wet in from week to week by eastern tanners. Hides are very dull and nominal in price, although light offerings prevent any decided break in quotations. Iron and steel is quiet, but the report of the large pool of manufacturers putting the price of billets to $20 has a strengthening effect on finished material. Lumber is moving better as the weather opens, and prices are steady. Coal is quiet.

Philadelphia, April 3.—Wool continues dull; many manufacturers are either closing their mills or running on short time. Cotton yarns are quiet, with a tendency to lower prices. A fair business is being done in dry goods. There is a slight advance in crude oil and gasoline. Boots and shoes dull, and indications point to lower prices. Sugar is firm, with a tendency to higher prices owing to scarcity of raw material.

Pittsburgh, April 3.—The volume of business done here during the past week is probably a slight increase over the week previous, but aside from this there is practically no change. No improvement is noted in collections, which are still regarded poor. With the formation of the new steel pool, which is now believed an assured thing in local iron circles, much greater activity is noted, and the volume of business done during the past few days is reported much larger than for some time. Prices have been very materially advanced, and the trade generally express the opinion that the present prices will be maintained.

Buffalo, April 3.—Warmer weather the past few days has stimulated trade for seasonable goods, but the general condition does not appear to be improved, and collections are slow and unsatisfactory.

Baltimore, April 3.—Trade has been rather quiet, although there have been some buyers in the city from nearby markets. Jobbers report business for the first quarter of the year better than it has been for several years past. Collections are fairly good.

West and Northwest.

Cleveland, April 3.—The trade situation is without noteworthy change from the ruling conditions of March.

Toledo, April 3.—No material change in trade conditions is noted at this point from that indicated last week. Weather conditions have improved but little. Collections are still unsatisfactory.

Chicago, April 3.—There has been a moderate improvement, but business is not active. Dry goods houses have had the best run of buyers, but they have not been as numerous as usual at this season when the weather was more seasonable. Purchases have been made in a small way, and there are no new features in cottons or woolens. The demand for light hardware is better, and sales of bicycles are increasing so that manufacturers are behind in orders. Indications are that sales this year will be the largest on record. More order are coming in for bar and iron and steel on the reported efforts of manufacturers to form a combination, which has brought many buyers into placing orders for prospective wants before prices are advanced. The demand exceed for pig iron and the market is stronger all around. Lumber is slow; the feeling on coarse is easy. Wool receipts 36,356 pounds.

Detroit, April 3.—Orders are fair in amount, but conservatism rules owing to the general outlook and continued slow collections.

Louisville, April 3.—Trade conditions have changed very little. Sales in dry goods, hats and hardware are up to the average. The volume of business in millinery shows a healthy increase over the past two years. The boot and shoe trade is not satisfactory. Jobbers in saddlery and harness have had a reasonably good spring trade, the bulk of business in this line being over for the season. Lower grades of leaf tobacco are more in demand. The market is irregular. Collections are fair.

St. Louis, April 3.—Jobbers of dry goods, hats and caps, groceries, millinery and hardware, and manufacturers of boots and shoes, say transactions are satisfactory for the season, although reporting a slight falling off in sales. Leather of all kinds is quiet, purchases being practically of a hand-to-mouth character. Hides are weak, with receipts hardly taken up. A betterment has taken place in the pig iron market, sales being more frequent and for greater tonnage. Steel bars have advanced in price, and iron bars are likely to follow. Block iron sheets are unchanged, but values have improved for steel. Wool is quiet and of nominal quotations. Collections only fair.

Kansas City, April 3.—Dry goods, shoe and hardware houses report a good trade, with fair collections. The live stock market is dull. Produce and commission houses are overrun with country consignments, with slow sales and low prices.

Milwaukee, April 3.—Trade continues quiet, though slightly more encouraging. Collections somewhat slow.

Minneapolis, April 3.—A severe storm has restricted the volume of trade, yet the movement of merchandise from jobbers' hands has been fair in volume.

Omaha, April 3.—The unfavorable weather has so affected trade in all lines that sales have been less than normal. Collections show no improvement.

Sioux Falls, April 3.—Jobbers report a better feeling, bu severe weather has interfered with all trades.

Southern Cities.

Charleston, April 3.—Business closes very quiet in all lines. Collections are a little better.

Savannah, April 3.—There is an increase in retail and wholesale trade and collections over preceding week.

Atlanta, April 3.—No material change is noted. Trade is rather quiet.

Augusta, April 3.—Little improvement in trade, either wholesale or retail. Collections are not satisfactory.

Birmingham, April 3.—Trade is somewhat dull, though everybody is trying to do some business.

Chattanooga, April 3.—Trade has not improved any during the week. Merchants seem to buy

oftener and in smaller lots. Collections are said to be satisfactory.

Nashville, April 3.—Business for the week is more quiet than last in all departments. Collections are not behind the average for the season. Money keeps close and not seeking outlet aside from regular commercial channels.

Memphis, April 3.—General trade shows but little change during past week. Collections are fair.

New Orleans, April 3.—Jobbing is scarcely up to the average for the season. Holders of Louisiana sugars are firm, and demand good. Cotton is being marketed steadily on rather a better demand. There is some improvement in marketing of rice.

Galveston, April 3.—Trade in all lines is dull and collections are poor.

Pacific Coast.

San Francisco, April 3.—Trade in all lines steady; produce active. Sugar advanced ⅛c. Exports light. Two ships loaded to-day with redwood lumber, one for London, the other South America. Collections are slow.

Portland, April 3.—The fruit crop of the Willamette valley has been somewhat damaged during the past week by frost. Except in leading merchandise lines, the jobbing trade continues quiet and without new features. Country collections are slow, and city collections are but little better. Retail trade is only fair.

Tacoma, April 3.—Jobbers report a slight improvement over last week. Exports for March reached $428,723.97, consisting of wheat, flour, lumber, coal and miscellaneous merchandise to equip China, Japan, Africa, Australia and Peru.

Seattle, April 3.—No special features are noted in trade circles this week beyond a large shipment of lumber and general merchandise to La Libertadt.

Canada.

Toronto, April 3.—Trade this week is only moderate in wholesale departments, but prospects appear brighter. Wheat is firmer, white selling on north and west railway lines at 75c. and 76c. Payments are yet slow.

Montreal, April 3.—Roads are still in bad condition. The week's sales are about the average, but marked activity is shown in shipments, summer rates of freight having come into force on April 1. No special change is noted in values, and not much improvement generally, but with the opening of navigation there will be more activity.

Halifax, April 3.—There is not much improvement yet in wholesale circles, and remittances are still complained of. City retail trade shows more activity, especially in dry goods and millinery. The market in fish is without special feature. Provisions and produce are very dull and prices low. Advices from the Newfoundland sealing fleet are not so favorable this week, and a number of disasters have been reported.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Dry Goods.

[Special to BRADSTREET'S.]

The weather has more or less affected the distributing trade, but prospects close better in this respect. The continued closing out of ginghams at low prices has supplied the present demand, although it is hoped that the low price at which they can be retailed will cause them to go into immediate consumption and thus relieve the market. Standard white cottons have also been reduced in price, which should increase their use. Raw cotton is showing a firmer tone, but until the surplus of goods gets used out of the way it is impossible for the latter to help the market. Specialties in printed fabrics yet go well, but common fancies are slow of sale and depressed. Dress woolens for fall delivery have been ordered quite freely thus far, and it looks as though American mills would have a better trade than during the spring season. Men's-wear woolens are dull and the market depressed. Many mills have been forced to stop from lack of orders, and more will follow. Clothiers are not heavily stocked, but lack confidence.

Wool.

[Special to BRADSTREET'S.]

The demand for wool is dull and the market continues depressed, with values nominal. Woolen mills are being closed in many instances, particularly those employed on men's-wear goods, and manufacturers show no desire to buy the raw material as long as there is no prospect of their needing it. Dress woolen mills are showing more activity since the market opened for fall goods, but as yet it has not resulted in increasing the demand for wool. The wool market abroad is firm, with a strong position noted, but this only helps the tone here through sympathy. Fleece wools are dull but held steady, with territory grades weak and in buyers' favor as far as prices are concerned. Some domestic wools have been sold for export, and it is hoped that a market abroad can be worked up for our surplus. Foreign wools are quiet but firm.

DECISION REGARDING CREDIT INSURANCE.

The Boston *Transcript* of April 1 says: "An important decision was to-day handed down by the full bench of the Supreme Court in the case of Charles L. Claflin et al. vs. the United States Credit System Company, in which the defendant's exceptions are sustained, the court holding that the plaintiff cannot recover upon their contract with the defendant, which was to insure their credits or accounts, because the insurance act of 1887, chapter 214, does not authorize the insurance of credits or accounts, and also because the defendant, a foreign corporation, has not been admitted to transact business in this commonwealth.

"The result of the decision is that a verdict of $3,363 for the plaintiff is set aside. The contract between the parties was made in April, 1891, and purports to bind the defendant, in consideration of a sum paid, to purchase at a fixed price the accounts which, during one year, the plaintiffs should have against ascertained insolvent debtors, or judgment debtors against whom execution should be returned unsatisfied. The court holds that the contract is one of insurance, and is made unlawful by the statute of 1887, for the reasons above given, and it will not lend its aid for the enforcement of an illegal contract.

"The court says: 'The defendant is a foreign corporation, domiciled in the state of New Jersey. By the act cited (statute 1887, chapter 214) no foreign insurance company shall be admitted to transact here any class of insurance until it does certain acts, and obtains from the insurance commissioner a certificate that it has complied with the laws of the commonwealth, and is authorized to make contracts of insurance. Before the enactment of statute 1887, chapter 214, if insurance was made by a foreign company without complying with the requisitions of the statute the contract was declared valid, by statute, while a penalty was imposed upon the making of the contract.

"'No authority is given by statute 1887, chapter 214, to any insurer, domestic or foreign, to insure mercantile credits or accounts. So far as the record before us shows, the defendant has not been admitted to transact insurance in this commonwealth. The contract sued on seems to be made unlawful by the provisions of statute 1887, chapter 214, section 3, both for the reason that the defendant has not been admitted to transact insurance here, and because insurance of credits or accounts is not authorized by the statute.

"'The illegality of the contract is not set up in the defense, nor was it noticed in the Superior Court, where the plaintiff had a verdict. But no court will consciously lend its aid for the enforcement of an illegal contract.'"

NEW YORK-BALTIMORE GRAIN TRADE RIVALRY.

The Baltimore *Sun* says: "Efforts put forth by New York and Philadelphia business men to secure the abolition of the 3c. differential on grain to Baltimore have stirred up grain men in this city.

"The Corn and Flour Exchange has taken up the subject, and the whole question has been investigated by the exchange's committee on law and transportation. This committee is composed of Messrs. Charles D. Fisher, P. H. Macgill and Frank Frick, Jr. Its report has been sent to the Baltimore & Ohio and the Pennsylvania Railroad companies. Assurance has been given to President Ramsay, of the exchange, that the Pennsylvania Company will uphold the differential. The Baltimore & Ohio occupies a similar position. The differential was acknowledged by the Joint Traffic Association. The committee's report is in part as follows:

"'The merchants of New York and Philadelphia are moving actively through their produce exchanges to modify or abolish the agreed differentials upon rail freights in favor of Baltimore. It is essential that strong representations be made to the railroads centering here and to the Freight Traffic Association as to the justice and necessity of the differentials.

"'New York periodically raises a storm about them, and her exertions have in the past resulted in their being cut down from 10c. to 5c., and then to 3c. per 100 pounds. For the sake of peace, and in conflict with the right of Baltimore by reason of her shorter route from the west, the railroads consented to the establishment by arbitration of a 3c. differential.

"'This city has always been cut out of the position that she ought to occupy by reason of her geographical advantages. Yet, New York is now demanding more. Her dissatisfaction at this time is caused by the fact that the last corn crop of the southwestern states was unusually large, and that in finding its way to the seaboard through the shortest routes, it has caused a considerable movement through Baltimore and other southern ports.

"'It is unnatural for the crops of Missouri, Kansas, Nebraska and other southwestern states to find their export outlet through New York and Boston, and nothing but an unnatural condition could force them through these channels.

"'The Erie Canal is and should be New York's great feeder, and it is very difficult for the merchants of this city and the railroads supplying them to compete with that route. During the season of

open navigation the crops of all the northwestern states, and of all other sections that can economically reach the lake ports, find their way to New York by way of the water route. Baltimore has no chance at them.

"'Are we to sit supinely and consent that, in addition to the tremendous advantages which New York enjoys in this respect, we will give also that which will result from our railroads agreeing to charge the same rates of freight between the west and this city for distances averaging over 200 miles shorter haul? These differentials have been in force since 1882, when they were established by the advisory committee after full and exhaustive representations of all the conditions had been made by New York, Philadelphia, Baltimore and western cities. Under them New York has had her full share of the freight movement, and more than her rightful share. She is now restive because she has not handled a large proportion of the corn movement of the last crop, which did not begin until about the time that lake and canal navigation closed, and because she is suffering in common with this port from the development of a very large traffic in that cereal through Newport News, Norfolk, New Orleans and Galveston.

"'It is not the paltry differential of 3c. per 100 pounds that is causing the great impetus to southern ports. If that were all New York and Baltimore would have no difficulty in maintaining their relative and usual positions with respect to the corn movement. We believe that the business of those ports has been built up by the granting of rates and facilities far in excess of 3c. per 100 pounds below the rates to New York, as well as far below the rates to Baltimore.

"'It is full time that the roads which center here should look to this Newport News business, and that they should use their power to put a stop to the wholesale cutting of rates which has made that port a most formidable rival to this, and which is building her up rapidly to be the most serious rival with which we have to contend.'

"The report also states that millions of dollars have been invested in steamship lines between Baltimore and European ports on the faith that the differential rate would be maintained."

BESSEMER STEEL PATENTS IN AMERICA.

It is to be regretted that the London *Iron and Coal Trades Review* could not express its opinions in the following article with volunteering statements which are not to its credit: "The lengthy letter * * * from Sir Henry Bessemer, the distinguished inventor of the process which bears his name, is not any too lengthy for the subject with which it deals. Usually, it is a matter of small importance to the general public whether the real inventor of this machine, or the discoverer of that natural law, or the original pioneer of a great movement, was Mr. Jones or Mr. Smith. Usually, also, it happens that with most great inventions there has been a certain amount of anticipation of the idea on which it was founded, although such previous conception did not reach the proportions or the completeness of the final achievement. But, as Sir Henry Bessemer clearly points out in his most interesting and conclusive letter, it is not apparent that the American Kelly attained even to this measurable distance of the magnificent metallurgical conception with which the name of Bessemer is connected. He was clearly groping in the dark, making merely random shots, and making them in a manner that was inconsistent with a knowledge of even the rudimentary principles of the behavior of molten iron under the influence of a high degree of oxygenation, and with a crudeness of methods and appliances that would have rendered ultimate success in the direction of the Bessemer process wildly improbable, if not entirely impossible. Yet it was for this cause and on this pretext that Sir Henry was refused a patent in the United States, and it is to the everlasting disgrace of that country that the real inventor of a process which has added untold millions to the wealth of the population, and, in the words of the Hon. Abram S. Hewitt, has assisted them to wipe off their enormous national debt more than any other single influence and movement, should have been rewarded by them with only a paltry ten thousand pounds in lieu of royalties.

"But, after all, it is a business maxim, rightly or wrongly, that an inventor is a sort of Ishmaelite, against whom every manufacturer's hand is justly raised, until he has succeeded in upholding his claims by legal process. In this respect, therefore, the inventor of the Bessemer process has not fared worse than other inventors, and he would probably be the last man to complain that he did not receive magnanimous treatment from the manufacturers whose interest it was at that time to evade payment of the royalties which Sir Henry deemed himself entitled to charge. Men do not import philanthropy into business methods, and they do not, to use a well-known American phrase, go into so risky an occupation as the steel industry for the sake of their health. The American courts upheld the Kelly patent and disallowed the Bessemer patent, for reasons that we need not now too curiously inquire into. Forty years ago the American judiciary was not so reputable as it is to-day, nor was it, in all probability, so free from certain influences that need not be specially named. But what the distinguished inventor of the Bessemer process has a real cause to complain of is that a claim which was even then admitted by everybody who understood anything of the subject to be flimsy and meretricious in the highest degree, and which has long since been relegated to the limbo of oblivion as one which was merely originated to serve the temporary purposes of a few dollar-hunting manufacturers, should now be revived by the elected president of one of the leading technical societies on the American continent—the American Institute of Mining Engineers—as if it had not merited its ignominious fate, but was in very truth the real germ of the system that has girdled the world with bars of steel and enabled engineers and architects to design and to build structures that would not otherwise have been possible. We do not think that Mr. Weeks will have added anything to his reputation by endeavoring to construct an edifice which is so clearly founded on sand, and which the aged and honored inventor of the Bessemer process has so effectually demolished. A little knowledge is clearly a dangerous thing in the case of the president of the institute referred to. With the utmost respect, we cannot help thinking that had he possessed a sufficiently intimate and practical acquaintance with the essential differences between the crude and unscientific experiments of Kelly and the beautifully perfect arrangements designed by Sir Henry Bessemer—even if they had been otherwise on the same lines, which, of course, they were not—he could not for a moment have supposed that the first was in any sense an anticipation of the second. While we regret, for the sake of the facts, that the aged metallurgist should have been made the victim of so unprovoked an attack from so entirely unlikely a quarter, we regret it all the more that the attack has proceeded from a country that has so delighted to honor the name of Bessemer as the United States has done. We hope to learn that the American Institute of Mining Engineers, which has not hitherto been entirely regardless of Bessemer's claims to the grateful recognition of the American people, will seize an early opportunity of making the amende honorable by requesting their president to withdraw an address which can reflect but little credit upon it or him either now or hereafter."

PANAMA AND NICARAGUA CANALS.

The New York *Railroad Gazette* says: "We have from reliable sources some information about the Panama Canal which is not only important in itself, but has an important bearing on another great enterprise.

"The affairs of the new Panama Canal Company are directed by a board in which sit representatives of fifteen (we believe that is the number) of the most important financial houses in Paris. This board is trying to put the undertaking on a sound basis—not what a promoter thinks a sound basis, but what the engineer and the financier will recognize as such. Certain construction work is going on at the isthmus, but we understand that it is only such as is necessary to preserve the work already done and to improve the entrance, which will be a work of some use if the canal is never built. The most important work now is collecting information. For that purpose the new company will soon have spent $1,000,000—not $350,000, as is advised for the Nicaragua Canal, but $1,000,000. Elaborate hydrographic surveys, river gaugings, rainfall measurements and land borings have been made. The precise facts will be made known.

"One might suppose that the facts would have been gathered before $300,000,000 had been spent. (Two hundred and sixty million dollars was the official figure of the liquidator as 'amount spent,' not face value of securities.) But the old company had the same large faith in its enterprise, and the same disregard for the remorseless laws of nature that the Nicaragua Canal Company has shown, and the old company was wrecked not by fraud alone, but by fraud and ignorance. An engineer and a careful student, in writing to us about this canal in 1892, said 'it has never been approached from the engineer's standpoint, whose aim is to remove or overcome obstacles, but not to proceed in reckless defiance of them.' Now the undertaking is being approached from the engineer's standpoint.

"When the new company gets together the information necessary to a judgment, it will submit that information to an international commission of engineers. It is expected that some of the most responsible American and English engineers, as well as French engineers, will be induced to serve on this commission. The judgment of that commission will determine the further action of the company.

"Another piece of information comes to our knowledge from the same reliable source. We are told that it is a fact that the foreign agent of the Nicaragua Canal Company has, within a short time, offered the concession and other assets of that company to the Panama Canal Company. The offer was made through an intermediary, a Spaniard, but was not even entertained by the Panama Company. Very likely this is the origin of the story that has been flying around, that a combination of the two interests was to be made. Possibly the offer was not made in good faith; possibly it was only made for its effect on public opinion in the United States, and made in such an irregular way that it could be repudiated or denied. But that it was made we have no doubt.

"Men who have soberly and carefully studied the situation, and who have the interests of our country very much at heart, have time and again asked that the nation be not made responsible for the Nicaragua Canal until the physical facts about the project were known, and have repeatedly urged delay on that one ground. They were always met by two answers. First, we already know all about the ground. Second, we must hurry, or some foreign power or interest will buy the financial control. The absolute worthlessness of the first answer is now made known by the conscientious work of the engineer board. * * * The second answer is just as worthless. It has long been apparent that foreigners could buy the concession whenever they wanted it. There has been no lofty and self-sacrificing patriotism on the part of the company. With them it is cold business. The offer to sell to the Panama Company and its fate is simply more evidence of what we have been saying. Foreigners can buy the concession if they want it, but they don't want it. Or, if the offer was not made in good faith, it was made to force Congress to buy; for that is what a guarantee of the bonds amounts to."

DECLINING BRITISH TINPLATE INDUSTRY.

The London *Iron and Steel Trades Journal* says: "The condition of the tinplate industry is gradually drifting from bad to worse, and the half-hearted efforts on the part of manufacturers in endeavoring to create new markets has resulted in nothing better than a further depression in prices. As we predicted in these columns some months ago, the scheme for the creation of new markets has come to nothing, and not only is this so, but the makers have decided to dissolve their association and divide the money they had collected for the purpose of developing fresh markets and stimulating the demand for plates. Consequently, every maker will act in accordance with his own views and will be a law unto himself, and the competition for orders will, very probably, become still more keen, and the cutting of prices in order to secure business will continue unchecked. The condition into which the trade has drifted is best indicated by the figures relating to the exports for last month as compared with the returns for February of 1895. The returns show a serious falling off, for while there were 33,339 tons exported in February, 1895, of the value of £390,480, there were only 18,454 tons sent abroad last month, of the value of £213,480, or a decrease of 14,885 tons in quantity and of £177,435 in value. During the two months ended February, 1895, 62,871 tons of tinplates and sheets were exported, worth £737,527, the quantity this year being 41,855 tons, of the value of £481,413. Our trade with America continues to dwindle away, as the United States took only 6,980 tons last month, compared with 23,201 tons in February, 1895. This time last year the Americans had taken 41,827 tons; they have only had 18,841 tons up to date this year. Russia has taken over 2,000 tons less, and France nearly 2,000 tons less. It is satisfactory, however, to note that increases are shown in the case of British East Indies, Australasia and British North America. Apart from our business with the United States, we have no great cause for complaint. It is true that France and Russia have taken much less than in February of last year, but it is known that consumers' stocks had accumulated in both those countries. With regard to our trade with the United States, if we have to lose the market the sooner our makers recognize the fact the better. The tinplate industry in the United States has come to stay, and the amount of business which will reach this country from the United States will entirely depend upon the question of price. If Welsh makers can make and deliver plates at a lower price, and, after including freight and duty, deliver them at a lower rate than the native mills, then they will retain a fair share of the American business. But, if in order to do this, they have to cut prices to such an extent as to necessitate the reduction of the workmen's wages to the lowest possible point, and even then have to accept unremunerative prices, it would, in our opinion, be better to do without the American business altogether. The question for Welsh makers, now that they recognize that the United States is a diminishing market, is what is to be done in order that the trade may have a chance of regaining its old position. The present position is the result of a combination of circumstances, and the sooner the makers face the position the better. They may look for some relief in other markets and in improved machines and methods, but the chief difficulty just now appears to be the want of an understanding between masters and men. Why not form a board of conciliation, composed of an equal number of employers and workmen, in order that the questions relating to wages, etc., now pending, may be amicably adjusted."

COAL GAS FOR FUEL.

The *Industrial Record* says: "The use of coal gas for fuel for domestic and factory purposes is a matter of great importance to the people of this section of the country, or in any thickly settled section where it will pay to erect a large plant for its production. New England to-day is unfavorably situated to utilize to the best advantage, comparatively, the coal of Pennsylvania and Virginia, upon which it is now chiefly dependent. The coal fields of Nova Scotia are more closely allied to the industries of New England than are those of Pennsylvania, and to that extent the industries of this section are deeply concerned in the development and proper utilization of the coal that is to be found in the provinces.

"Considering the coal supply for New England in this connection, the movement that has been instituted by the Dominion Coal Company to obtain from the state of Massachusetts charter rights for the furnishing of cheap gas, etc., to the public becomes of special interest. In order to obtain corporate rights, the Dominion Coal Company, in the person of its president, Henry M. Whitney, has petitioned the present legislature of Massachusetts for a charter to furnish cheap gas to the public, by permitting it to bring coal from Cape Breton in its raw state, and resolve it into its constituent elements of coke, tar, gas and ammonia, and supply these for the various needs of the people. This seems to be the primary object of the petition, but the gas that is thus produced need not necessarily be confined to domestic use, but may be utilized for power purposes, for the operation of factories, etc., and it is our impression that in time this would be considerably developed and made to enter into our industrial economies. It has been calculated as something quite feasible that on the basis of an expenditure of twenty cubic feet of gas for one-horse power per hour, or 200 feet for a day of ten hours, that power can be delivered for $18 a year per horse-power.

"The petition of the Dominion Coal Company has for its purpose the establishment of a manufacturing enterprise to convert its coal into coke, tar, ammonia and gas and sell these several products, and we believe it to be to the best interests of the community to grant the wishes of the petitioner. This scheme is not a new thing, though it may be so to this country to some extent, though there is a plant similar to the one that it is proposed to erect located at Johnstown, Pa. It is not an experiment, as it has been tried satisfactorily upon a commercial scale in Europe. We think that the manufacturing industries of this part of the country should uphold the hands of Mr. Whitney in his efforts to obtain corporate rights from this state. Mr. Whitney has never been known to misuse in the least degree the rights that he has been able to obtain for the corporations under his management.

"It will require a large expenditure of money to build the necessary ovens and to maintain the enterprise, and a large consumption of the products will be necessary in order to make the scheme profitable. We hope to see the legislature take favorable action upon the petition. We believe that its granting would be of immense benefit to the industries in this district."

SOUTHERN IRON AND STEEL INTERESTS.

The New York *Sun* says: "Representatives of all the larger iron-producing interests in the Birmingham district, at a conference held in this city last week, signed a memorandum of an agreement for the establishment of a joint selling agency. The Tennessee Coal & Iron and the Sloss companies have been working in harmony for several months, and now they have been joined by the Thomas and the Woodward companies, which are also large producers of iron in Birmingham. Under the new arrangement practically all of the iron produced in and about Birmingham will be sold through a single commissioner. It is learned that all the money required to erect the $1,000,000 steel plant at Birmingham has virtually been pledged by capitalists interested in the Tennessee Coal & Iron and the Sloss companies and in the Southern and the Louisville & Nashville railroads. The erection of this mill, the first of its kind in the Birmingham district, will be begun at once. It will manufacture rails and all forms of merchant steel, and as all the materials used are produced in the neighborhood, it is estimated that the products of the mill cannot be undersold throughout the south. The mill will obviously give a decided impetus to industrial activity in Birmingham. The decision to establish a steel plant at Birmingham is the outcome of a discovery recently made that low silicon iron, well suited for steel making by the open-hearth basic process, can be produced from ordinary red Alabama ores. Large orders for this iron, which is now being made at the Alice furnaces in Birmingham, have been received from the Carnegie and the Illinois Steel companies."

OUR STEEL INDUSTRY.

The Chattanooga *Tradesman* says: "The Bessemer steel industry began in the United States, in 1866, in a very small, feeble way. As we now remember (we have no data at hand), there were converted, in a small concern in Michigan, 3,000 tons that year. As we further recollect, some 7,000 tons of steel rails were made in the United States in 1867. Then, and for several years succeeding, rails absorbed the whole product here and practically all of it in England. The development of the product was rapid, and the diversification of its uses were no less rapid. In twenty years it had grown to what were then thought immense proportions. The country turned out 2,269,190 gross tons of ingots in 1886. This had reached 3,688,871 tons in 1890, and in 1895 it was 4,909,128 tons, twice the product of nine years ago and nearly 500,000 tons to spare for good measure. The open-hearth steel made in the country last year was round 1,250,000 gross tons. It is quite safe to say that our total product of mild steel of all sorts exceeded 6,000,000 gross tons, or about 2,200,000 gross tons more than Great Britain ever made. Of the big total of Bessemer three states made as follows:

Pennsylvania	2,978,924
Illinois	866,531
Ohio	719,954
All other states	343,719

"Pennsylvania made almost 75 per cent. of the total.

"The outturn of steel rails for 1895 was 1,266,081 gross tons, against 1,036,353 tons in 1893 and 904,020 tons in 1894. We have said that rails were about the only thing made of soft steel when it first came into use; now it has literally pushed iron aside in many other lines beside rails. Nobody thinks of building a ship of either wood or iron now. Everything that floats is made of steel, even the canal boat. Boilers and bridges, all of steel; tens of thousands of tons are made into castings, light and heavy. Tires of wagon wheels are steel, and many carriage makers use steel exclusively on their vehicles. Hundreds of thousands of tons of the material are drawn into wire, for use in making bicycles and other articles. For many uses merchant steel is cheaper than first rate merchant iron. In short, the introduction of the great inventions of Bessemer, Siemens, Thomas and others, in the way of producing soft steel (refined iron) cheaply, has revolutionized the iron trade all over the world.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men. It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS DISPLAYED.....25 cents a line, agate measure.

FINANCIAL.

To Bondholders of the Northern Pacific Railroad Company and Holders of Mercantile Trust Company Certificates of Deposit, under the agreement of February 19, 1894.

Under and in conformity with the powers and provisions of the Bondholders' Agreement above mentioned, we hereby give notice that this Reorganization Committee has prepared and adopted a Plan and Agreement for the reorganization of the affairs of the Northern Pacific Railroad Company, and has duly lodged the same at New York City in the office of this Reorganization Committee, and with The Farmers' Loan and Trust Company and the Mercantile Trust Company; and at Berlin and London with the Deutsche Bank.

At each of said places also will be found printed copies of said Plan and Agreement for distribution to Bondholders and Certificate holders.

Dated NEW YORK, March 16th, 1896.

EDWARD D. ADAMS, Chairman.
LOUIS FITZGERALD, Vice-Chairman.
JOHN C. BULLITT,
CHARLES H. GODFREY,
J. D. PROBST,
JAMES STILLMAN,
ERNST THALMANN,
Reorganization Committee.

CHARLES C. BEAMAN, WM. NELSON CROMWELL, } of Counsel.

A. MARCUS, Secretary.

Northern Pacific Reorganization.

NEW YORK, PHILADELPHIA AND BERLIN,
April 4th, 1896.

Holders of two-thirds in amount of the undermentioned bonds, certificates and notes, having, in person or through their representatives, already accepted the plan and agreement of reorganization dated March 16th, 1896, all holders of outstanding

Northern Pacific R. R. Company's
General Second Mortgage Bonds,
General Third Mortgage Bonds,
Dividend Certificates,
Consolidated Mortgage Bonds,
Collateral Trust Notes,
Preferred Stock,
Common Stock,
AND
Northwest Equipment Stock,
AND
Trust Company's Receipts for the above-described bonds.

are hereby notified to deposit their holdings with any one of the undersigned on or before Thursday, APRIL 23D, 1896, receiving suitable certificates of deposit therefor.

Deposits after that date, if accepted at all, will be subject to such terms and conditions as may be imposed by the Managers.

Holders of certificates heretofore issued by the Mercantile Trust Company of New York for Bonds deposited under the Bondholders' Agreement of February 19, 1894, not already stamped by us as assenting to the plan and agreement of March 16, 1896, are hereby notified to present their certificates at one of our offices on or before Thursday, April 23d, 1896, in order that we may stamp their approval thereon. The Managers have the right, which at any time hereafter, in their discretion, they may exercise, to exclude absolutely from the plan any holders of such receipts who shall not conform to the requirement to present their receipts for stamping, as expressly assenting to the plan and agreement.

The cash payments in respect of stock will be payable upon dates hereafter to be announced.

Security-holders are invited to obtain from us copies of the plan and agreement, as all depositors are bound thereby. Many features of much importance to security-holders are therein set forth.

Any further information connected with the reorganization, desired by security-holders, will be furnished on application at any of our offices.

INSURANCE.

THE UNITED STATES LIFE INSURANCE CO.

1850.—1895.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 11, 1896.

Among the recently organized bodies having to do with monetary and financial affairs, the Maryland Bankers' Association has shown an unusually rapid growth in strength, and bids fair to be one of much influence, not only within but without the state. The first annual convention of this body was held in Baltimore on Thursday, and was signalized by the adoption of a particularly clear and vigorous declaration in favor of sound money. This resolution declares that the association is unalterably opposed to the free coinage of silver and to every debasement of the currency, in whatsoever form it may be presented, and further gives expression to the firm conviction that the true interests of the country will be best served by its rigid adherence to the gold standard of value, the continuance of which will not only preserve its financial integrity and the future welfare of its citizens, from the wage-earner to the capitalist, but will insure, through the prompt restoration of confidence, that rapid development of its resources, which will eventually place it first among the commercial nations of the earth.

The meeting was further rendered noteworthy by an address by the Comptroller of the Currency, who congratulated the association on having, as its very first act, undertaken to do the most essential thing to be done in the existing condition of the business affairs of the people, namely, to speak in a manner which admits of no double construction as to what its idea is regarding the standard of value upon which contracts between man and man should be made. Mr. Eckels, after paying a high tribute to the financial record of Maryland, declared that the whole money question turns upon a question of credit, and that the credit of a country is maintained by what it sets up as a standard of value. The people who are dealing with us abroad, he said, not less than the people who are transacting business here at home, take their estimate of our financial integrity from the financial standard of the government which we support, and which we control in important details, and if the United States should set up a standard of value which cheapens the present one, which makes a subject of inquiry and of constant questioning whether or not the government shall maintain the payment of its obligations in the only standard of value which is recognized in the commercial world, all the financial integrity of the individual citizen in his individual capacity could not save the country from a state of financial collapse.

Continuing, Mr. Eckels said that if we are to maintain commercial relations with the greatest people of the world, and if our products are to be sold to them, and we are to secure products from them, we must have, as a standard of value, not that which the law says is a standard of value simply, but we must have as a standard of value that which the commercial world recognizes as the only standard of value. The fiat of the government, he added, is one thing, actual value as approved of by the commercial world is another, and in all the contests which have been witnessed from the first day that the first medium of exchange was invented until the present the commercial world has been indifferent to what the law has said, and has had as its sole rule and guide the value of the thing which is used as a standard of value and medium of exchange, and the record of the commercial world from the first day until the present time is that no article has ever been used for a medium of exchange beyond the time when, as an article of commerce, it also had the same value that it had as an article of money. Silver as a standard of value has passed from the world of commerce, the Comptroller said, because the world of commerce has set the seal of its disapproval upon it, and all the laws placed upon the statute book in Washington, or in London, or in Berlin, or in Paris, cannot reinstate it.

Excise laws are measures which are always difficult to frame, and of which it is proverbially difficult to forecast the outcome in operation. The Raines law, recently enacted in New York, forms no exception to the rule. Already question has arisen as to whether it can be made to apply to some of the subjects sought to be covered by its provisions. A recent decision of the State Court of Appeals, for example, though it is true construing a prior excise law, seems to hold in general terms that the distribution of liquors, the property of a club formed for social purposes, among the members thereof does not constitute a sale. If this decision is to be taken as expressing a general principle, clubs would not seem to be required to take out selling licenses under the new law. In other directions, too, it seems likely that the provisions of the law can be avoided without an actual violation of its provisions.

Mayor Wurster, of Brooklyn, has transmitted to the legislature of New York a communication declining to accept the provisions of the Greater New York bill as far as the city of which he is the chief executive is concerned. His main objection to the measure is that while under favorable conditions and on fair terms the consolidation of the municipalities may be of decided benefit, yet until a measure shall be prepared defining the terms and conditions of consolidation, which shall be submitted to the people for their approval or rejection, he cannot feel that justice will be done the city of Brooklyn. He says that it would certainly not be a wise and prudent business transaction for the owner of a valuable piece of property to sign a contract to sell the same, and provide that the title should be absolutely transferred at a certain date in the future, for a price and upon terms and conditions which should be fixed by some third person over whose acts he had no control, and that he cannot reconcile it with his ideas of that which should constitute a business administration of the affairs of the city, to consent that her rights, property and franchises shall be disposed of in a similar way.

Already, as is learned from Washington press dispatches, the House Committee on the Judiciary has made considerable progress with the bankruptcy bill before it. Whether that progress has been in a direction which will commend itself to the commercial community will be better determined when the exact form of the bill, as settled by the committee, shall have been made public. As far as can be judged from the reports at hand, the measure, in in its present shape, is in the nature of a compromise between those demanding a law for voluntary bankruptcy only and those who advocate provision for involuntary bankruptcy. Current accounts say that the measure has been stripped of the "severe" features of the Torrey bill. The title to the property of the bankrupt does not pass from him until actual adjudication.

In the Senate the Judiciary Committee has agreed upon a favorable report on the voluntary bankruptcy bill. According to press advices, this bill provides that any debtor owing $200 or more may make a voluntary assignment before any competent authority of all his property, except that exempt under the law, for the benefit of his creditors equally. He is required to file a full list of all his property, exempt or unexempt, and of his creditors. Preferences are allowed only to debts due the United States, to any state or territory, to servants or laborers for service performed within one year, and to liens or incumbrances on homesteads to the extent of $1,000. The debtor is allowed to file a petition in the United States District Court four months after making his assignment, asking to be discharged from his debts, which the court is authorized to grant after due proceedings for the protection of creditors and the observance of the law. This discharge shall not include any debt which may have been created in consequence of defalcation as a public officer or as guardian or trustee, or while acting in any fiduciary character. The law is to remain in force for two years only. The fact that the two committees are proceeding on different lines does not argue well for the enactment of a desirable bankruptcy law by the present Congress.

By a decisive vote, in what was, however, a slim House, the bill to abolish the compulsory pilotage system, so far as it relates to sailing vessels engaged in the coastwise trade, was defeated on Thursday. A strong argument was made in favor of the bill to the effect that the compulsory system constitutes not only a heavy tax on sailing vessels, but an unjust discrimination against them, because it is not exacted upon American steam vessels engaged in the coasting trade, and, furthermore, that by the repeal of the compulsory pilotage laws the national legislature would be only following with a lagging step in the wake of the north Atlantic states, which had already abolished the system as far as they had jurisdiction over it. These arguments, however, did not appeal to the House, and the effort will have to be made over again.

The bill providing for the inspection of immigrants by United States consuls, which has been for some time under consideration by the House Immigration Committee, has just been reported to the House. In the report accompanying the measure the committee says that the object of the measure is to enforce existing laws, and such law as may hereafter be passed by Congress restricting immigration. Statistics show, says the report, that with a foreign population of 14.77 per cent., more than half of our white penitentiary convicts, and more than half of the white inmates of our poorhouses, are foreigners, and prove that of the immigrants coming here during the past few years too many are deficient in morals, and are incapable physically of self-support. The bill does not add to the excluded list of immigrants. The committee does not agree with the chief objection urged against the measure, viz., that it cannot be enforced, and argues that it is self-enforcing. A number of members of the committee, it is said, are opposed to the bill, and it is probable a minority report will be made.

MOVEMENT OF PRICES DURING THE QUARTER.

The movement of prices of the more important agricultural and manufactured products and live stock during the past three months has been a disappointment. It had been presumed that after the upward turn in quotations between March and September, 1895, and the increased demand at that time in almost all lines, no matter how marked the falling off in wholesale lines during the concluding months of 1895, the earlier portion of 1896 must necessarily usher in a more vigorous demand for staples and a stronger tendency for quotations.

This had not happened by April 1; on the contrary, if 108 comparisons given in connection herewith are considered in detail during the past thirty-nine months, since April, 1893, just prior to the outbreak of the panic of that year, lists of articles and commodities for which prices have increased and decreased will be found of exceptional interest, as going to indicate what degree of progress, if any, has been achieved in the matter of recovery of prices from the lowest points reached since the panic, commonly supposed to have been late in 1894, or during February and March, 1895. Prices compared are those for April 1 with January 1 in the current calendar year, and with April 1, respectively, in 1895, 1894 and 1893; or, practically, to-day's quotations as compared with those for three months ago, one year and two and three years ago.

A comparison of the list of quotations for April 1 with those for all of the four preceding dates shows that in only 28 instances have there been advances; 10 compared with three months ago (alone); 6 as compared with three months, and one, two and three years ago; 7 as contrasted with prices three months, and with one and two years ago; 3 as compared with quotations three months and two years ago, and 2 only when placed in contrast with quotations three months and one year ago.

On the other hand, it is found that there are 50 instances in which prices were lower on April 1, 1896, than on all preceding dates specified. Thus, there were 8 lower (only) than three months before, to offset 10 increases in quotations; there are 26 lower prices on April 1 than for three months and for one, two and three years before as compared with the 6 increases at that date. Only one decrease is shown when comparison is made with three months and one year ago, and none when compared with three months and two years ago. But there are 15 lower quotations for April 1 as compared with corresponding prices three months and three years ago.

When April 1 quotations are compared with those on four preceding dates (three months, one year and two and three years ago), there are seen to be only six higher—wheat, wheat flour, sugar, soft coal, rosin and nails. The underlying influences in advancing prices of sugar and soft coal need not be discussed. The fact that wheat flour and its products are higher than at periods named is interesting, as indicating the possibility, for some time suspected, of their tending upward with some permanence. But this brief list of staples for which prices are higher than at four preceding periods is met by a list of 26 for which prices are lower, of which 11 are food products.

When present quotations are compared with those for three months and one and two years ago, the list of increases is very little extended, because the high prices of the early portion of 1893 are left out of the account. The extreme depression of 1894, and the fact that the improvement which showed itself in 1895 had not gained complete headway by April that year, and the additional fact that December, 1895, witnessed considerable reaction from the improvement shown earlier in the year, permit April 1 quotations, 1896, to show increases, as explained, in prices of bread, peanuts, Bessemer pig iron, steel billets, silver, copper and glass.

In the long list of prices in an accompanying table, only those for beef carcasses, brick and for ground lime were higher on the 1st inst. than three months and two years ago, and none of the prices April 1, 1896, was lower than on both these dates, January 1, 1896, and April 1, 1894. The quotations for tar on April 1, 1896, were substantially the same as three months and two years ago.

As contrasted with prices three months and one year ago, there were higher quotations on the 1st inst. only for Australian wool and anthracite coal, while the single lower price was that for alcohol. The quotation for aluminium was unchanged.

The record is more striking when prices are compared with those for three months and for three years ago.

APRIL 1, 1896, WITH THREE MONTHS AND THREE YEARS AGO.

Lower (15)		
Mackerel,	Cotton sheetings,	Sulphuric acid,
Peas,	Ginghams,	Hay,
Potatoes,	Pig iron (eastern),	Tea,
Cotton,	Steel beams,	Eggs,
Standard sheetings,	Quicksilver,	Union leather.

There were no higher quotations on April 1, 1896, than for three months and for three years ago.

APRIL 1, 1896, WITH ONE, TWO AND THREE YEARS AGO.

Higher (10).	*Lower* (13)	
Molasses,	Corn,	Bacon,
Raisins,	Oats,	Beans,
Buenos Ayres hides,	Rye,	Cheese,
Hemlock hides,	Sheep,	Salt,
Pig iron, eastern,	Hogs,	Oak leather,
Connellsville coke,	Mutton,	Phosphate rock.
Petroleum, crude,	Beef, family,	
Petroleum, refined,		
Carbolic acid,		
Quinine.		

The price of nitric acid on the first of the current month was unchanged as compared with one, two and three years ago.

APRIL 1, 1896, WITH ONE AND TWO YEARS AGO.

Higher (15)		
Mackerel,	Ginghams,	Quicksilver,
Peas,	Cotton sheetings,	Spruce,
Potatoes,	Iron ore,	Sulphuric acid,
Cotton,	Steel rails,	Rubber,
Standard sheetings,	Steel beams,	Hay.

No quotations are shown for April 1 which are lower than one and two years ago, or even unchanged, as compared with the latter.

When prices one and three years ago are considered with respect to those on April 1, 1896, that for alcohol alone, out of the 108 named, is found to be higher, but those for beef carcasses, onions, currants, tar and brick are lower.

Investigations of changes in the price of food products and other necessaries of life, whether made by government officials or private students of economic and social questions, have been so largely confined to the records of the wholesale markets that it may be both interesting and valuable to show what the average cheapening of a variety of food staples has been in the last five years in a typical interior manufacturing city, and as such things affect consumers instead of producers or boards of trade and chambers of commerce. It is notorious that great differences in the wholesale price of important products sometimes have very little effect upon the poorer classes of consumers. Bread is often sold by the loaf, throughout large cities, at about the same price when wheat is 60c. a bushel in Chicago that it brings when the wheat market is 20c. or 30c. higher, and the prices charged for beef in retail shops may have only a remote connection with the value of cattle on the hoof in Kansas City, or even in New York.

The manager of the retail department of a prominent grocery store at a large western city has recorded changes of prices for a number of years. This concern, it is reported by a correspondent, does a business of nearly $1,000,000 a year (retail), "its trade being out of all proportion to the size of the city, as such things go in other and larger centers of commerce and industry." For a generation "it has been conducted on a cash basis, and its methods of management have remained substantially unchanged. For that reason its prices constitute a fair record of the scale of values for food products as paid by retail cash buyers. The old price lists are said to show the cost of such groceries as might be bought for a boarding-house or a large family, say as a Saturday order, and make a striking presentation when compared with like totals five years ago."

In preparing this table great care has been exercised to preserve quotations for like grades or quantities. "The flour was of the same brand in both years, and the butter came from the same creameries. The raisins were loose muscatels from California in both instances, and there was no change, in any instance, which could affect the intrinsic values of the articles as food. The soap came from the same works, and was of exactly the same kind." The figures are as follows:

	March	
	1891.	1896.
1 barrel flour	$5.00	$3.85
25 pounds granulated sugar	1.78	1.26
5 pounds creamery butter	1.75	1.25
5 dozen eggs	1.50	.60
5 pounds prunes	.80	.50
1 bushel potatoes	1.25	.25
3 cans tomatoes	.30	.21
3 cans peaches	.78	.51
10 pounds rolled oats	.45	.25
5 pounds lard	.50	.45
1 gallon vinegar	.25	.18
10 pounds buckwheat flour	.35	.20
2 pounds evaporated apricots	.50	.28
1 ham (11 pounds)	1.32	1.21
1 pound black pepper	.18	.12
3 pounds Java and Mocha coffee	1.04	1.00
1 gallon maple syrup	1.10	.80
1 box soap	3.15	2.50
5 pounds raisins (4 crown)	.80	.30
5 pounds currants	.40	.35
1 peck navy beans	.65	.25
7 pounds starch	.42	.25
2 pounds soda crackers	.16	.14
Totals	$24.43	$16.71

"The difference of $7.72 is a decrease of 31.6 per cent. in the cost of the articles enumerated. Reckoned on the present cost, it is evident that a given sum will go almost one-half farther in providing a city family with groceries than it would five years ago. Where wages have not fallen and employment is as plentiful as it was five years ago, there has evidently been a marked social improvement through the lessened cost of food, and, therefore, in a sense, a higher plane of living.

"On the other hand, the cheapening of food products has told against farmers, especially those who had old debts to pay. The changes which were a boon to millions of city people increased the difficulties of a multitude of agriculturists."

THE RENEWAL OF GOLD EXPORTS.

The engagement and shipment to Europe of $800,000 gold on last Tuesday, followed by a similar transfer of $500,000 on Thursday, seems to have created no particular commotion in either the stock or the money markets. The matter has been discussed to some extent as, perhaps, indicating the commencement of a fresh outflow of gold, but it has not been used as the basis for a bear movement in stock values, nor has the money market shown the slightest appearance of being sensitive about the shipments. In fact, the chief interest they have excited relates to the possibility that they were made under circumstances connected with the financial operations of the Russian government, which would recall the methods by which the Austrian government procured its gold supplies largely in this country when the restoration of its currency to a gold basis was in progress.

The fact that the Treasury gold reserve is in a healthy condition had, of course, an effect in making these gold exports of little immediate importance. The Treasury gold available for the redemption of legal tenders is now about $125,000,000, and there is still a balance of some $15,000,000 due on account of deferred payments for the recent bond issue, or in the hands of the special bank depositories. It is also to be remarked that the $1,300,000 of gold just exported was not withdrawn from the Treasury, but was supplied to the firm of foreign bankers which sent it abroad by one of the large national banks, which is also one of the depositories for a portion of the proceeds of the recent bonds. There is an idea prevalent that the amount thus turned over by the bank in question will be counted against the government in the final settlement between the Treasury and the depositories. This, however, is not made public, and for the moment, at any rate, the fact that it was supplied from the bank's vaults and created no immediate reduction in the amount held by the Treasury tended to minimize the importance of the transaction.

The foreign exchange market has been gradually drifting into a condition which would render such shipments of gold possible, and, indeed, necessary. While transactions in exchange have been on a very restricted scale, the feature has been the absence of any large supply of commercial against exports, and London just now is not buying securities in this market. It is known, however, that a fair rate for loans of money would attract considerable foreign capital, but, unfortunately, the figures—about 4½ per cent. for 60-day loans—which would serve as an inducement for such transactions on the part of London houses cannot be obtained. Indeed, the action of the New York money market this week would indicate that the plan supposed to be entertained by the Treasury, of influencing the money market through the withdrawal of the proportion of the bond sale proceeds left on deposit with the banks, seems to have broken down owing to the practical glut of money. Under these circumstances some further gold withdrawals are possible. It must be remembered that on April last year $2,893,610 was sent abroad, while in April, 1894, the gold shipments reached a total of $11,723,771.

As to the current report that the shipments this week were made possible by the payment of a small premium at the instance of the Russian Treasury, there is nothing whatever on which to base an opinion. It can be said that in such cases the treasuries of European countries and the bankers through whom they act make no revelations of these transactions or purposes. There is, however, a general belief that Russia is beginning to attract gold for the purpose of instituting a currency reform, and that its hand will be seen to a considerable extent in the tendencies of the world's money markets for some time to come. If this should prove to be the fact, a serious drain upon our gold resources is not improbable.

COMPARATIVE PRICES OF 108 STAPLE ARTICLES, RAW AND MANUFACTURED PRODUCTS, PRODUCE, CATTLE AND MEATS,

AT QUARTERLY INTERVALS, SHOWING FLUCTUATIONS IN QUOTATIONS FROM THE CLOSE OF 1890 TO JANUARY 1, 1896, COVERING THE PERIOD OF RECENT EXTREME DEPRESSION.

	1891-92.				1892-93.				1893-94.				1894-95.				1895-96.

MARCH RAILWAY EARNINGS.

The lull in general trade reported during the month of March, indications of which have already appeared in bank clearings returns, are now reflected in the gross railway earnings returns for the month just closed. A perceptible falling off in the volume of business is indicated by those returns, and the shrinkage in the percentage of gain shown over the corresponding period a year ago from the percentages of January and February is noticeable. In spite of this contraction of traffic, however, this year's figures continue to make quite good comparisons with a year ago. This is especially the case in the returns made by the grangers and the Pacific roads, where the increases reported are, in most cases, fully up to the January and February levels. Less favorable showings are made, however, by the trunk lines, central western, the southern and southwestern and coal roads, of a volume sufficient to affect the general showing made, and to bring the gain over March a year ago down to a point below the gain made in the whole year 1895. The very favorable returns of January and February, of course, make the three months' showing, as a whole, quite a good one.

The total earnings of 115 roads for the month of March aggregate $36,698,625, an increase over March a year ago of 4.6 per cent. This followed an increase in March, 1895 over 1894, of less than 1 per cent. The following table, showing the increases and decreases in each month for the past three years, best illustrates the still favorable position held by railroad earnings for March and the three months' period of this year:

	1895.	1894.	1893.
April	Inc. 4.5	Dec. 14.3	Inc. 3.5
Four months	Inc. .9	Dec. 13.4	Inc. 2.0
May	Inc. 6.5	Dec. 17.5	Inc. 9.3
Five months	Inc. 2.5	Dec. 14.2	Inc. 4.0
June	Inc. 8.0	Dec. 22.0	Inc. 5.0
Six months	Inc. 2.5	Dec. 15.4	Inc. 4.5
July	Inc. 15.6	Dec. 19.0	Dec. 4.0
Seven months	Inc. 4.8	Dec. 19.0	Inc. 2.0
August	Inc. 1.6	Inc. .9	Dec. 13.0
Eight months	Inc. 4.2	Dec. 14.0	Inc. .8
September	Inc. 4.6	Dec. 5.3	Dec. 9.5
Nine months	Inc. 4.5	Dec. 13.0	Dec. .5
October	Inc. 6.8	Dec. 3.1	Dec. 2.1
Ten months	Inc. 4.7	Dec. 12.2	Inc. 1.0
November	Inc. 6.3	Dec. 1.4	Dec. 6.6
Eleven months	Inc. 4.8	Dec. 10.9	Dec. 1.5
December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	1895.	1894.
January	Inc. 11.3	Dec. .5	Dec. 12.0
February	Inc. 13.7	Dec. 2.3	Dec. 12.0
March	Inc. 4.6	Inc. .6	Dec. 13.4
Three months	Inc. 9.5	Dec. .5	Dec. 12.6

The gain of 4.6 per cent. in March, it will be seen, is only about one-third of the gain reported in February, and less than one-half the gain reported in January. The following table, showing the gains or losses in March and the three months' period this year as compared with last, by groups of roads, compares with similar returns for January and February and the calendar year 1895, as follows:

	Year 1895.	January, 1896.	February, 1896.	March, 1896.	Three mos. 1896.
Granger	Inc. 7.6	Inc. 22.0	Inc. 22.2	Inc. 21.0	Inc. 21.8
Central west'n	Inc. 8.0	Inc. 8.2	Inc. 7.5	Inc. .3	Inc. 5.6
Trunk	Inc. 5.0	Inc. 10.0	Inc. 6.9	Inc. 1.5	Inc. 5.9
Eastern	Dec. .2	Dec. .3	Inc. 5.4	Dec. 16.2	Dec. 3.4
Coal	Inc. 6.3	Inc. 7.0	Inc. 2.5	Dec. 10.0	Dec. 2.4
Southern	Inc. 2.2	Inc. 10.3	Inc. 20.3	Inc. 1.1	Inc. 10.7
Southwestern	Inc. 2.0	Inc. 4.5	Inc. 10.1	Dec. 5.4	Inc. 2.1
Pacific	Inc. 7.5	Inc. 17.0	Inc. 22.3	Inc. 17.8	Inc. 19.3
Totals, U. S.	Inc. 5.1	Inc. 11.3	Inc. 13.8	Inc. 4.6	Inc. 9.8
Mexican	Inc. 0.4	Inc. 5.7	Inc. 8.3	Inc. 4.3	Dec. .3
Totals	Inc. 5.2	Inc. 11.3	Inc. 13.7	Inc. 4.6	Inc. 9.5

The largest increase reported by any one group is that of the granger roads, 21 per cent., and the smallest gain that of the central western roads, three-tenths of 1 per cent. Another good gain is that of the Pacific roads, 17.8 per cent. The heaviest decrease is that shown by the one eastern road reported, 16.2 per cent. Other decreases are those of 10 per cent. on the coal roads and 5.4 per cent. on the southwestern roads.

For the three months' period the grangers show the heaviest gain with an increase of 21.8 per cent., closely followed by the Pacific roads with 19.3 per cent. increase. The gain on the southern roads is 10.7 per cent., while the gain on the central western and trunk-line groups is in the neighborhood of 6 per cent.

STATISTICS OF CIRCULATION.

Statistics of money in circulation show that during the month of March there was a slight net decrease amounting to only $112,594. National bank notes led in the list of items of increase, with a gain of $5,653,650. Next in order came silver certificates, with an increase of $4,486,483. The other gains were of $1,635,000 in currency certificates and $618,665 in gold coin. The leading item among the decreases was a gain of $8,170,091 in United States notes. Treasury notes showed an increase of $2,345,584, and there were also increases of $773,758 in subsidiary silver, of $723,189 in standard silver dollars, and $493,770 in gold certificates.

The money and bullion in the Treasury showed a net increase of $14,213,130 for the month. Here all the items showed increases with the exception of national bank notes and silver bullion, the decreases in which were respectively $1,519,540 and $984,080. United States notes led the increases with a gain of $8,170,091. Then followed in order standard silver dollars with a gain of $2,223,476, gold bullion with a gain of 2,233,179, gold coin with an increase of $1,956,532, Treasury notes of 1890 with an increase of $1,707,584, and subsidiary silver with a gain of $425,888.

In the following table are shown in detail the general stock of money coined or issued, the amount in the Treasury and the amount in circulation:

	General stock coined or issued.	In Treasury.	Amount in circulation April 1, 1896.
Gold coin	$588,743,303	$142,831,047	$445,912,256
Standard silver dollars.	426,289,916	371,497,164	54,792,752
Subsidiary silver	78,216,677	15,246,374	62,970,303
Gold certificates	43,822,469	583,220	43,239,249
Silver certificates	348,325,504	11,293,078	337,032,426
Treas'y notes, act July 14, 1890	136,081,280	32,352,314	103,728,966
United States notes	346,681,016	114,392,534	232,288,482
Cur'y cert'f's, act June 8, 1872	34,680,000	220,000	34,460,000
National bank notes	221,316,027	7,110,998	214,205,029
Totals	$2,224,156,192	$695,526,729	$1,528,629,463

As compared with the corresponding date last year, April 1, there was a decrease of over $33,500,000 in the amount of gold coin in circulation. Other decreases were of over $5,600,000 in gold certificates, of over $17,700,000 in Treasury notes of 1890, of over $24,600,000 in United States notes, and of a little over $2,300,000 in currency certificates of 1872. The increases were of a little over $800,000 in standard silver dollars, of a little over $3,000,000 in subsidiary silver, of over $13,200,000 in silver certificates, and of over $11,000,000 in national bank notes. The total circulation showed a falling off of over $55,500,000 as compared with April 1 last year. The circulation per capita, based upon an estimated population of 71,009,000 on April 1 last, was put by the Treasury experts at $21.53. This represents a decrease of six cents for the month, and of $1.26 as compared with that corresponding date last year.

SHARES OF LABOR AND CAPITAL IN PRODUCT.

It is difficult to prevent altogether the circulation of false or misleading statements, and sometimes the game is hardly worth the candle, but once in a while it is important, particularly when a misleading statement is declared to emanate from an authority of consequence, to check its further progress. For some time past a paragraph has been diffused, more or less widely, in which the declaration is made that Commissioner Wright, of the Department of Labor, has figured out that the average rate of wages per year paid in the United States is $347, and the average product of each laborer is valued at $1,888, and from this statement the deduction is made that the employer gets 82.2 per cent. of the product, while the labor is allowed only a paltry 17.8 per cent. From this the deduction is still further drawn that the proceeds of his labor paid to the American workingman is smaller than that paid to any other workingman in the world.

The commissioner has thought proper to direct attention in the current issue of the *Bulletin* of the department to the fallacy embodied in the paragraph referred to. He says that the figures themselves are in the main correct, though relating more particularly to the census of 1880 than to any other collection of data. An analysis of the figures, however, and the facts underlying them shows, he says, the fallacy of the conclusion drawn from them. He points out that if the aggregate wages paid in the manufacturing and mechanical industries of the United States, as shown by the census of 1880, be divided by the total number of employees to whom the wages

were paid, the quotient will be 347, thus determining the average wages paid to the employees in the manufacturing and mechanical industries of the country as $347. Dividing the aggregate value of all the products of manufacturing and mechanical industries by the number of employees engaged therein, the quotient is 1,965, showing that the average product per employee was $1,965. Now, $347 is 17.7 per cent. of the gross value of the per capita product, as stated, leaving a balance, of course, of 82.3 per cent., or $1,618, which the originator of the statement referred to above assumes goes to the employer.

But—and this is the point of importance—the 82.3 per cent. of the total product, or $1,618 per capita, covers all expenses of production, cost of materials, miscellaneous items, profit, deterioration, interest—everything, in fact, which can be counted as cost of production other than wages. Taking the Eleventh Census—that for 1890—it is found, Commissioner Wright says, that the value of the gross product per capita for the number of employees engaged in manufacturing and mechanical industries was $2,204, and the average annual wages per employee, computed for 1890 as already computed for 1880, was $445. The writer of the statement referred to above would assume, for the Eleventh Census, that while $445 was paid to labor, $1,759 went to the employer; the commissioner says, as a matter of fact, of the total product per capita, 20.18 per cent. went to labor, 55.08 per cent. for materials, and 24.74 per cent. to miscellaneous expenses, salaries, interest, profits, etc. It is perhaps too much to expect that this statement of the commissioner will stop the travels of the paragraph criticised, but he has at least done what he could to that end.

PACIFIC RAILROAD FUNDING.

Whether a measure for funding and readjusting the indebtedness of the Pacific railroads to the government can be passed before the adjournment of the present session of Congress may well be doubted. Previous experience with legislation on the subject is still adverse to the proposition. It does not seem that the element in Congress which would favor the government taking the roads for the debt and running them, presumably at a loss, for the benefit of the sections they traverse have any strength. Nevertheless, the adverse sentiment in connection with the corporations, which were aided to construct their lines by a direct loan of the government's credit, is very strong in the west, and responsibility for adopting a measure which would release their stockholders is something which politicians would be decidedly inclined to avoid on the eve of a presidential campaign.

Considerable interest has, however, been aroused by the news that the conference sub-committees of the Senate and House of Representatives, after protracted work and the hearing of a great mass of testimony on the subject, have agreed upon a form of funding bill for the debt of the subsidized roads. The measure, which, it is stated, has been printed, will now go before the full committees on railroads in the Senate, and Pacific railroads in the House. It is uncertain whether these bodies will report the bill to their respective chambers before adjournment interrupts the work of Congress. Nevertheless, Washington reports have conveyed something of an impression that the matter is far from being in a hopeless position, and that a change has taken place in the temper of the national legislature as regards the treatment which should be accorded the railroad companies involved in the question. The stock market has responded to these influences by displaying a decided increase of interest and activity in Union Pacific stock, which made a slight advance this week over its previous quotations.

The draft of the bill prepared by the sub-committees is, of course, liable to be seriously changed and amended before it comes from the full committees, if this ever occurs. It proposes, however, to fund the existing obligations of the companies to the government at a low rate of interest, and to extend the time for payment of the principal of the debt so that the annual installments thereon will finally extinguish it in 50 or 60 years. It provides that the entire existing debt and interest shall be calculated up to January 1, 1897, and the resulting sum shall be the total debt of the roads to the United States. A new mortgage on all the property of the roads is to be issued to the government, subject, however, to a new first mortgage. The new bond is to run from January 1, 1897, and to bear interest at 2 per cent. per annum. It is to be provided that for ten years, from January 1, 1898, the roads shall pay, in addition to interest, $365,000 per annum on account of the principal, and for ten years more shall pay $550,000 per annum, after which the yearly installment on account of principal shall be $750,000 per annum until the bonds are paid off. As regards the treatment of the individual roads, the proposed bill provides that the obligation to the government on the part of the Central Pacific property shall be guaranteed by the Southern Pacific Company, and that the various non-subsidized lines of that system shall be brought under the lien of the mortgage to the government. The Union Pacific may issue $54,000,000 of 4 per cent. 50-year first mortgage bonds, which shall be prior to the government's lien, and may also issue 4 per cent. preferred stock to an amount equal to the present outstanding common stock of the company.

It is understood that the representatives of the railroad companies are dissatisfied with the propositions in question, especially with that for the liquidation of the entire debt within 50 or 60 years, the contention being for a much longer time and for correspondingly less onerous annual payments on that account. It would, however, seem that the committees have devised a measure as liberal as any that the present Congress would be likely to entertain. The fact that the currency 6 per cent. bonds issued in aid of the Union Pacific's construction began to mature in July, and that under the reorganization of the Union Pacific foreclosure is to be pressed for by the first mortgage bondholders, whose lien is prior to that of the government, seems to have altered the situation, and it is said that this is the reason for the altered sentiment in Congress, and the renewed hopes that something may be done in the premises forthwith.

CANADIAN PACIFIC'S YEAR.

Although of comparatively small importance so far as the relations of its securities to the American stock markets are concerned, the Canadian Pacific Railway has assumed, from the date its lines were completed, a very significant, and, at times, a troublesome, attitude in the railroad situation of the United States. It has, indeed, been a thorn in the side of the railroad associations and an element in the rate situation which American managers could not afford to disregard. The restrictions which the Interstate Commerce laws imposed upon the action of our own roads have, as is well known, furnished further opportunities for the great Canadian line, the management of which has been free to seek for business by the open use of methods which the companies on this side of the border could only pursue secretly and in evasion of the law. It is often said, and probably with a great deal of truth, that a very large proportion of the demoralization of rates during the past decade is chargeable to the Canadian lines, and in this the Canadian Pacific, from its position and the extent of territory its system reaches, has taken a decidedly leading part.

It cannot be denied that the financial operations of the company have attracted a great deal of adverse criticism. This has not come from American sources. Our own public have little general knowledge of the affairs of the company in that respect, and take no interest in them except so far as they bear upon the ability of the road to continue its aggressive policy in regard to traffic originating in the United States. London financial authorities have, however, supplied the lack of warnings upon this subject, and it has been well recognized for some years past that the sort of financial partnership between the Canadian government and the railroad furnished no guarantee for the future of the latter, while the extraordinary rapidity with which the system has grown was, as our own experience has invariably shown, a source of weakness.

The last few years, involving, as they have done, a period of depression in Canada similar to that affecting the industries of the Union, have not failed to affect the position of the Canadian Pacific. The suspension of dividends on the stock in the autumn of 1895 was taken as a sign that the company could no longer maintain the position it had assumed, though the declaration of 1½ per cent. this spring came as a surprise, and lends additional interest to the showing for the last year, which has just been furnished in the form of the annual report. This document gives the following record of earnings and expenditure:

	1895.	1894.	*Changes.*	
Gross earnings	$18,941,037	$18,752,168	Inc.	$188,869
Operating expenses	11,460,085	12,328,859	Dec.	868,774
Net earnings	$7,480,952	$6,423,309	Inc.	$1,057,643
Other income	552,912	333,825	Inc.	219,087
Total income	$8,033,864	$6,757,134	Inc.	$1,276,730
Charges	6,659,478	7,283,565	Dec.	624,387
Balance	$1,374,386	*$526,731	Inc.	$1,901,117
Dividends	1,231,960	1,881,960	Dec.	650,000
Balance	$142,426	*$2,408,691	Inc.	$2,551,117

* Deficit.

The language of the report indicates an appreciation of the fact that criticism upon the large reduction in the item of operating expenses is likely. President Sir William Van Horne says in his remarks: "Let it be assumed that the large reduction in working expenses for the year was made at the expense of the physical condition of the property, the directors beg leave to say that with the single exception of the car equipment, the property of the company was never in a better condition than at the close of the year, and that, particularly in respect of permanent way, it was better than ever before." At the same time the details of the reductions are significant in their way. No less than $312,000 was cut down in the maintenance of way and $157,000 in maintenance of cars, while the amount of equipment is not so large, and has suffered the ordinary deterioration of an additional year. At the same time it must be noted that the average mileage operated during 1895 is 6,444 miles, against 6,344 miles in 1894, an increase of exactly 100 miles, so that the apparent gain in net earnings is actually smaller when reduced to a mileage basis. The cut in the proportion of operating expenses from 17.75 per cent. of the gross to 60.50 per cent. seems extremely violent, even when compared with the similar methods adopted by some of our own western roads. The tonnage carried one mile was 1,490,000,000 tons, against 1,313,000,000 tons in 1894, an increase of 13 per cent. Yet it would seem from the above showing that only about $400 per mile was expended upon the roadbed and permanent structure of the property.

The cutting off of dividends was obviously the correct course to pursue under these circumstances. Perhaps their resumption is explained by the fact that the enormous expenditure of fresh capital for which the Canadian Pacific is famous has to go on. The report under consideration shows that the hard times made little difference in this respect. The road issued last year $1,000,000 or more of debenture stock, and the report points out further improvements urgently needed to the extent of some $2,000,000. The ability of the company to sell securities must, therefore, be maintained at all hazards, and the comparatively good showing which is made by the report is manifestly in furtherance of that object.

THE GREATER NEW YORK QUESTION.

Just at present wide attention is being attracted by the question of consolidation as applied to the great metropolitan district—the Greater New York. The mayors of the principal cities to be affected have been holding hearings on the bill, and the press has been filled with arguments pro and con. The drift and the weight of argument appear to be in favor of consolidation, however, and it is noteworthy that some of those who criticise the bill at present before the legislature are in favor of consolidation in the abstract.

It is, perhaps, worth while at this stage of the question to state just what it is proposed to effect by the bill under discussion. That measure consolidates into one municipality on January 1, 1898, the city and county of New York, the counties of Kings and Richmond, and Long Island City, the towns of Newtown, Flushing and Jamaica, and part of the town of Hempstead, in the county of Queens. For all purposes the local administration and government of the territory included within these boundaries is in the meantime to remain in and be performed by the respective bodies, political and corporate, to which they are now intrusted, except as may be hereafter changed by law, and in the meantime the existing bodies, political and corporate, are to continue to exist with the same powers, privileges and franchises, and continue to exercise the same powers and duties, and the various officers thereof are to be elected or appointed in the same manner as heretofore.

This situation is, of course, only provisional. To provide for the future government of the consolidated municipality, a commission is to be constituted to make a final report to the legislature, and to submit such bills as will, upon enactment, establish a government of the municipality of the Greater New York. This commission is to

be composed of the president of the commission appointed in 1890, the mayors of the cities of New York, Brooklyn and Long Island City, the State Engineer and Surveyor, the Attorney-General, and nine other persons, residents of the enlarged district, to be appointed by the Governor, by and with the advice and consent of the senate. One object set before the commission is the attaining an equal and uniform rate of taxation, and of valuation for the purpose of taxation, throughout the whole of the territory. The commission is to report on or before February 1, 1897, and is to cease to exist on March 1, 1897. It is given full authority to employ counsel, subpœna witnesses, compel the production of public corporate documents touching the subject matter committed to its charge, and otherwise act as may be necessary, speaking generally, to accomplish the purpose of its creation.

The commission is directed to proceed as continuously as may be with the work before it, and to submit from time to time bills in proper form for enactment. A proposed charter for the government of the consolidated municipality, or bills for the same end, is among the specific measures enumerated, and, among other things, provision is to be made for the election of a mayor and other municipal officers at the general election to be held in 1897. The act, it need scarcely be said, does not attempt in any way to affect boundaries of counties or powers or obligations of county officers as fixed by the constitution.

It will be seen from the above summary of the measure that it does not propose any completed scheme of government, but is, in fact, merely preliminary to the establishment of such a system. The only part of the measure that is entirely definitive is that consolidating the several municipalities on January 1, 1898. The provision exacting the enactment of a provision for the holding of an election of officials for the enlarged municipality at the general election in 1897 can scarcely be called definitive in strictness, because it is conceivable that the enactment of such a measure, or of other of the measures proposed, might be delayed or defeated. For the rest, the existing administrative organizations are to be continued in existence until their successors or successor shall be provided by the process of legislation. There is much force in the contention of those who insist that the preferable plan would have been to submit a complete scheme of government for the new municipality, to go into effect when the territorial merger takes effect.

THE TRANSVAAL SITUATION.

For a month past the condition of affairs in South Africa has divided attention with the international complications created by Italy's policy of adventure in Abyssinia and the proposed Anglo-Egyptian effort to reconquer the Soudan. The uprising of the natives in Matabeleland would alone furnish abundant cause for anxiety, though it is evident that the savages cannot long make head against two forces of the colonists. This matter, however, necessarily influences the London stock market, and has caused a depression in the securities of the British South African Company and of its numerous offshoots. The principal disturbing element, however, proceeds from the Transvaal. Neither the Boers, the Uitlanders nor the British government and public are satisfied with the situation that has existed in the country since the collapse of the Johannesburg reform movement and the defeat and capture of Jameson and his raiders. The Boers are deeply sensitive on the score of the reception accorded to the Jameson party, the acclamations of the English public when they arrived in London and during the course of their hearing nullifying the effect of any apparent effort on the part of the government to obtain their conviction and punishment by the courts. At the same time the demand made by Mr. Chamberlain that President Kruger shall come to England to discuss the questions at issue has aroused a determined opposition on the part of the Boers, and is calculated to create further resistance to all efforts to improve the political position of the foreign residents in the republic. The latter and the gold-mining industry are naturally suffering from the uncertainty, and, while it cannot be said that the Rand is paralyzed by the state of affairs, there has been a falling off in its productiveness, while new capital cannot be obtained for the many mining propositions which are constantly being brought forward. Everything, in fact, is, for the moment, at a standstill. Both the British authorities and the Uitlanders are further irritated by the attitude of the Boers—their stubborn disinclination to grant any of the reforms in finance and administrative methods, which all careful observers concede to be necessary to the future well-being of the country and the continuance of its material progress. It is alleged that the influence of a knot of Germans and Hollanders is paramount at Pretoria, and that this influence is constantly exerted to influence the Boer officials and population to oppose the demands alike of the British government and of the British Uitlanders. In commenting upon the facts of the case the London journals do not fail to point out that the railroad and other monopolies, which weigh so heavily upon the mining industry of the Transvaal and on the capital engaged in it, are almost exclusively in the hands of these anti-English rings, whose opposition is, therefore, of a a self-interested kind. Accounts also come of an influx of adventurers of the same class into the Transvaal, of the formation and drilling of bodies of troops under German instruction, and the erection of modern forts at Pretoria.

The conditions thus indicated are sufficient to cause a marked feeling of suspense and anxiety in the London market for African gold-mining shares. A pacific solution is, of course, earnestly desired by such interests, but as yet no satisfactory outcome is in sight. Commenting on the facts, one of the London journals uses language which appears to sum up the feeling that now exists in England in regard to the entire question at issue. It says: "We regret very much that the British government should have been drawn into such an acute controversy as a consequence of an inexcusable outbreak of rebellion, fomented by groups of speculators and financial agitators with unjustifiable ambitions and mischievous aims; but the occasion has, unfortunately, been created, and something has to be done. The methods of the reform committee were as lawless in design as they were contemptible in execution. Still, that cannot blind the English government to the fact that the Uitlanders have real grievances, and that if there are to be good government and a law-abiding population in the country those grievances will have to be redressed. This is the objective upon which, we believe, the opinion of nearly every party in the state is agreed, and the practical question is how to reach it without having to go outside the limits of diplomatic discussion. It is quite admitted that the convention gives us no right to meddle in the internal government of the Transvaal, or to force upon the Boers a constitution of which they disapprove; but outside all treaties there is the inherent right of every state to see that its citizens who are residents in foreign countries are fairly dealt with, and not trampled down by the heavy foot of an overbearing authority. While keeping this general right steadily in view, it is at the same time desirable that there should be a forbearing tolerance of Boer antagonism, because it has been wantonly provoked by the action of the conspirators. So far as we can see there is nothing to be gained by precipitating a crisis in the negotiations. There is something almost pathetic in the spectacle of the Boers, after having to retreat further and further north in order to escape the aggressive influence of the foreigner, being brought to bay at last on an issue which means, sooner or later, the extinction of their rule, in accordance with the simple principle of the inalienable rights of majorities."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

Every now and then, for time whereof, the memory of man runneth not to the contrary; it has been found necessary to warn people against "unclaimed estates swindles." One would think that enough had been said by way of warning against these affairs, but a communication from United States Consul Downes, at Amsterdam, is devoted to another reference to the subject. It appears from what the consul says that "the 'old Dutch estates' fever is prevailing in the United States and Canada. For the three past months inquirers on this subject at the consulate are so numerous as to almost baffle replies and threaten to interfere seriously with the regular work of the office." The consul adds: "These estates do not exist. They are myths, will-o'-the-wisps, fakes. The 'Bank of Holland,' in which the 'unclaimed millions' are alleged to be deposited, does not exist. Careful investigation induces the belief that these estates originated in the brain of some rascally speculator, who, imposing on human credulity, found many victims, and fleeced them most profitably. If these estates ever had a bona fide existence, then they come clearly within the purview of the statutes of limitation, passed by the Dutch Parliament in 1852, by which all unclaimed inheritances irrevocably escheated, after a lapse of five years, to the state. Every dollar spent in reference to these estates is so much money wasted."

CURRENT BUSINESS NEWS.

Industrial.

The new cotton crop is to be a very large one, judging from the acreage, says the Chattanooga *Tradesman*, "the extra amount of fertilizers and the care given to its planting. All the southern cotton mills are running on full time, and each week adds to their number."

Demand for iron at the south continues active. "Production is fully maintained, and no accumulation of stocks is reported. Recent combinations among iron and steel producers have much strengthened the market for southern pig iron."

During 1895 Alabama produced 5,691,711 tons of coal and 1,404,820 tons of coke. The coke production was confined to Jefferson, Walker, Bibb and Tuscaloosa counties.

The miners and mine workers of the Fairmont region, in West Virginia, have received notice that the rate for mining would be advanced 2½ cents a ton, and the pay of mine workers accordingly. This is equal to an advance of about 8 per cent.

The steel manufacturers bave finally completed their arrangement for controlling the output, and placed in the hands of a committee the regulation of the trade. Twenty-five establishments are in the movement, and the April output, it is said, will not exceed 250,000 tons, the eastern price being $22.75 and the western $22.50 per ton.

The Assabet Woolen Mills at Maynard, Mass., employing 1,100 hands, will run but four days a week until "business improves."

The *Iron Age* says that while there has been some shifting of production, the pig iron output has remained stationary during March. Stocks, however, have been added to in coke and anthracite pig to the extent of over 50,000 tons, which seems to indicate that restriction is not sufficient.

Wire rod manufacturers were to meet at Cleveland to form a pool to "regulate prices in harmony with the figures established for billets."

The *Iron Age* says that "one interest affected has, more than any other, enlisted the sympathy in the iron trade, and that is the tinplate industry. A delegation waited upon the pool to present the perplexities of this new branch, which is seriously threatened. We understand that $22.25 has been fixed for sheet bars, and tinplate bars $22.75. An even more dangerous situation is that of the cottontie manufacturers, who have all they can do to keep out foreign ties, which come in free of duty. With cheap billets they can hold the greater part of our home territory, but the advance decreed puts them pretty hopelessly out of the race."

According to reports made to the Cotton Mule Spinners' Convention at Boston, ring spinning frames are falling into disfavor, and mill managers are gradually going back to the use of mules for spinning cotton.

Commercial.

The lake shipyards will, in 1896, turn out over $9,000,000 worth of new tonnage of all sorts. These crafts vary in size from a 75-foot tug to a 438-foot freighter. The greatest number will be of the largest sort. Of the whole fleet now being constructed there are about twenty steel freighters, whose cost is about $200,000 each. There is also one side-wheel passenger steamer to cost $375,000, one car ferry to cost $300,000.

The National League of Musicians began its eleventh annual convention in Washington, D. C., this week. The league has over 15,000 members.

About 300 New York state canal boat owners, representing about 375 boats, have formed a boat owners' association to make rates on grain, iron and other commodities carried between Buffalo and New York on canal boats. An agreement was signed to maintain the new rates. So far the owners of about 80 per cent. of the boats in operation between New York and Buffalo have signified their willingness to uphold the rates fixed by the committee.

The movement in Chicago "looking towards the improvement of the Chicago river and harbor is of more than passing significance," says an exchange. "Along this river there is a dock frontage of over 40 miles, including the slips, and not less than 70,000 feet of dockage is used by lumber yards, in which it is stated there is not less than $10,000,000 invested. A government engineer, who had been sent to investigate and report to Congress, reported unfavorably to the proposition to have the government appropriate some $700,000 to deepen the channel to sixteen feet, and recommended that the Calumet be improved and a main harbor for the port at Chicago be constructed at that point. This is not satisfactory, very naturally, to the shippers along the Chicago river."

According to official statistics, the number of vessels built in the United States during the first quarter of this year were 124 vessels, of 18,170 tons, as compared with 128 vessels, of 29,336 tons, built in the previous quarter. Fifty-nine of the new vessels were steam and 65 sail. The steel steamers built were 9, of 12,349 tons, of which 2, of 7,004 tons, were built on the great lakes.

The Minneapolis *Market Record* says: "Altogether, the wheat supply in northwestern interior houses approximates 17,750,000 bushels. Minneapolis and Duluth received a little more than 8,000,000 bushels during March, and as the total supply in interior houses was reduced a little more than 3,000,000 bushels, it follows that farmers marketed at such houses during the month approximately 5,000,000 bushels. Farmers also marketed to country mills, and supplied considerable for outside shipment, going out of the states south of Minneapolis, and not reckoned. Allowing that amount to be 1,000,000 bushels, which cannot be far from the fact, it shows a total farm supply marketed during the month of 6,000,000 bushels."

It was stated at Pittsburgh April 7 that the following prices for steel billets in the Pittsburgh district have been definitely agreed upon by the new combination: Soft steel billets, four-inch and upwards, $20.25; sheet bars, $22.25; tinplate bars, washed and cut, $22.35—all delivered at buyer's mill. This is an advance from $3 to $3.25 per ton on billets since the recent upward movement commenced.

Tacoma, at the head of navigation on Puget Sound, Washington, one of the youngest of American seaports, commands a large foreign traffic. Nearly 75 per cent. of all the tea imported into the United States arrives there "and ships from every clime find a home at our wharves. Wheat, flour, lumber and coal, all products of the state of Washington, are exported to the markets of the world. Steamship lines radiate from Tacoma to all points on Puget Sound, also Alaska, San Francisco, Central America, China, Japan and Africa, causing an immense traffic in every class of merchandise."

Financial.

The following securities were sold at auction this week at New York:

10c	Shares of Bay State Gas Company of Delaware, $50 each	20
$2,000	Fulton Elevated Railway Company first mortgage 5 per cent. bonds (hypothecated)	48½
$3,000	Kings County Elevated Railway Co. second mortgage 5 per cent. bonds (hypothecated)	$105
37	Shares of Automatic Fire Alarm and Extinguisher Company, Limited, $25 each	$20 per share
4,180	Shares of Richmond County Land Company, Limited, $50 each	$1
$2,000	Richmond County Land Company, Limited, 6 per cent. bonds	$8
500	Shares of Osprey Consolidated Mill and Mining Company, $50 each	$1
101	Shares of New York Motor Company, $100 each	$1
8,180	Shares of Continental Railway Company, $100 each	36
980	Shares of King Bee Mining Company, $50 each	$1
50	Shares of Keely Motor Company $50 each (hypothecated)	5¼
6	Shares of National Union Bank of New York, $100 each (hypothecated)	216
$5,000	Long Island City & Newtown Railroad Company third mortgage 6 per cent. convertible bonds, due 1913	61½
$4,000	Manhattan Railway consolidated mortgage 4 per cent. bonds, registered, due April 1, 1990.	94¼
14	Shares Germania Fire Insurance Co., $50 each.	210
40	Shares Central Trust Company, $100 each	1,020½
167	Shares Chicago, Wisconsin & Minnesota Railroad Company preferred, $100 each	5
167	Shares Chicago, Wisconsin & Minnesota Railroad Company common, $100 each	1
250	Shares New Jersey Steamboat Co., $50 each	51
450	Shares Manhattan Trust Company, $30 each	141¼
25	Shares Westinghouse Electric and Manufacturing Company preferred, $50 each	106
50	Shares Westinghouse Electric and Manufacturing Company, "assenting," $50 each	58¼
100	Shares National Butchers' and Drovers' Bank, $25 each	139½
25	Shares Fourth National Bank, New York, $100 each	182
20	Shares Manufacturers' Trust Company of Brooklyn, $100 each	200
$40,000	Forty-second Street, St. Nicholas Avenue & Manhattanville Railroad first mortgage 6 per cent. bonds, due 1910	116½
650	Shares Union Typewriter Company common, $100 each	6⅛
6	Shares American Telegraph and Cable Company, $100 each	91½
4	Shares Missouri & Kansas Telephone Company of Kansas City, Mo., $100 each	30
1	Share Great Southern Telephone and Telegraph Company, $100 each	32
$1,000	Lehigh Zinc and Iron Company, first mortgage 6 per cent. bond, registered, due June 1, 1899.	95
5	Shares Franklin National Bank, New York, $100 each	85
10	Shares Great Eastern Casualty and Indemnity Company, $100 each	85
150	Shares Cresson & Clearfield Coal and Coke Company, $100 each	11
10	Shares Atlantic Trust Company, $100 each	177
100	Shares Terre Haute & Peoria Railroad Company, preferred, $100 each	50c. per share.
25	Shares Great Eastern Casualty and Indemnity Company of New York, $100 each	85
$2,500	City of New York 6 per cent. gold bonds, due January, 1902	113½
$7,000	State of Georgia 4½ per cent. refunding bonds, due July 1, 1915	113⅜
28	Shares National Butchers' and Drovers' Bank, $25 each	142
4	Shares National Bank of Commerce, $100 each.	202½
3	Shares Bank of America, $100 each	313
50	Shares Union Typewriter Company, first preferred, $100 each	85
17	Shares Pennsylvania Coal Company, $50 each.	339

A unique business embarrassment is recorded in the following: "Order of Pente, a beneficial organization, made an assignment for the benefit of creditors."

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 82,694 tons, against 88,032 tons the previous week and 60,614 tons the corresponding week of the previous year.

A dispatch from Asheville, N. C., says that Judge Simonton, of the United States Circuit Court, has decided the Cape Fear & Yadkin Valley Railroad foreclosure case in favor of the Baltimore reorganization committee. "This means that the property will be sold as a whole, and not in divisions or sections, as was desired by the New York reorganization committee."

The St. Louis, Alton & Terre Haute Railroad Company has been leased to the Illinois Central for the period of 99 years from October 1, 1895, with the privilege of renewal. This lease has been made upon the guarantee of the Illinois Central to pay a dividend of 2¼ per cent. per annum to the stockholders of the leased company. The Illinois Central has also assumed the lease of the Belleville & Southern Illinois to the St. Louis, Alton & Terre Haute, the Illinois Central guaranteeing a fixed rental of 4.80 per cent. per annum to the holders of the preferred shares of the Belleville & Southern Illinois Railroad Company for 99 years, from January 1, 1896, with privilege of renewal, the first payment to be made on July 1, 1896, and thereafter each six months.

The preliminary statement of Southern Pacific earnings and expenses for the past three calendar years follows:

	1895.	1894.	1893.
Gross	$50,457,024	$50,918,157	$53,946,667

The Central Railroad Company of New Jersey has declared a quarterly dividend of 1¼ per cent., payable May 1.

The Chicago Great Western Railroad has given notice to the chairman of the Western Passenger Association that, on a date to be announced later, it will accept second-class tickets for passage in first-class Pullman sleeping-cars.

Representatives of the transcontinental railroad lines of the country, who met in Milwaukee last week, are reported to have come to an agreement "whereby the Transcontinental Association, which has been defunct since 1892, was reorganized. A committee was appointed to formulate a new schedule of tariffs, and it is expected that a general advance in rates will be arranged."

The Long Island Railroad Company has declared a quarterly dividend of 1 per cent., payable May 1.

The Toledo & Ohio Central Railroad Company has declared a quarterly dividend of 1¼ per cent. on its preferred stock, payable April 25.

Legislative.

A favorable report has been ordered by the House Ways and Means Committee on the bill prepared by Mr. Tawney, of Minnesota, to regulate the manufacture, sale, importation and exportation of "filled cheese."

The House of Representatives has recommitted to the Committee on Coinage, Weights and Measures the bill to make the metric system the legal system in the United States after January 1, 1901.

The New York legislature has passed the Armstrong bill providing that bicycles shall be transported as baggage for passengers by railroad corporations.

Miscellaneous.

The following breezy sentences are from the Toledo market circular of Messrs. C. A. King & Co.: "Consumption of flour varies greatly. BRADSTREET'S is trying to find out what the average consumption of flour, breakfast cereals, etc., was during March. He is making inquiries of different families in various sections. Different families vary greatly, and it will be very difficult to arrive at a satisfactory conclusion, but he is entitled to credit for his effort." Presumably, the writer of the foregoing would refer to the head of the British Lloyds as Mr. Lloyds.

A late issue of *Harper's Weekly* says: "It is to be hoped that Congress will not adjourn before passing the Loud bill, which seeks to limit second-class matter strictly to newspapers and periodicals. A strong effort is being made to defeat the measure, and there seems to be some misconception at Washington as to the attitude towards it of some of the publishers of periodicals. The *Weekly* has favored this bill simply because it is for the general interest that it should become a law. The government is now losing annually between $18,000,000 and $19,000,000 as the result of a perversion of the law."

Foreign.

According to a cablegram, the annual report of the Cunard Steamship Company shows that the profits in 1895, including £2,000 brought forward from 1894, amounted to a total of £144,000. After the fixed and other charges are met there remains but £1,400. Hence there will be no dividend on the ordinary shares. The report complains of the bad business throughout the year, except in the cabin passenger branch, which showed a fair increase.

Report has it that the formal cession by China of Port Arthur to Russia will be shortly ratified at Moscow.

The Montreal Board of Trade proposes to memorialize the Dominion government to allow the exportation of American cattle in guarantee from the port of Montreal during the summer season. American cattle have been shipped from St. John during the winter months.

The labor conference at Nottingham has decided to invite all the Socialist bodies in Great Britain to confer together upon the best means of bringing about united political action on their part.

The Buenos Ayres *La Prensa* advocates the extension of trade and other relations with the United States. The government will extend every facility and aid to the party of students from Princeton College who have come here on an exploring expedition.

Official figures show that the coal output of Belgium last year was 20,092,412 tons, of which 4,573,584 were exported. The year's production of pig iron was 816,039 tons, and of manufactured iron 446,219, of cast steel 448,364, and of wrought steel 386,135 tons. There was a decrease of 117,762 tons in coal and an increase of 116,779 in steel and iron.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Traveler—Risk—Permission.

The Supreme Court of Louisiana held, in the recent case of Settoon et al. vs. Texas & Pacific Railroad Company, that where one goes on premises by implied permission, he does so at his own risk, assuming the responsibility for all risks incident to the place, and that where there are two avenues of travel, and the more dangerous one is selected, the party injured cannot recover, if the injury inflicted was due to the risk incident to the route selected.

Insurance—Premium—Forfeiture.

The Supreme Court of Indiana held, in the recent case of Meyer vs. Manhattan Life Insurance Company, that where a plaintiff seeks to recover on policies which have been declared forfeited, basing his claim upon an alleged notice given by the defendant to the insured, that it would not receive premiums according to the terms of its contract, coupled with a wrongful and oppressive demand for larger premiums and a readiness on his part to comply with such contract, the existence of such facts must be established by the evidence or the plaintiff must fail.

Carrier—Lost Package—Liability.

The Supreme Court of Georgia held, in the recent case of Southern Express Company vs. Wood, that the silence of a shipper touching the character and value of goods contained in a package which does not indicate that its contents are of great or unusual value, or such an imperfect description of such contents as misleads the carrier with respect to their nature and value, may, when the circumstances require a full disclosure from the shipper, even in the absence of an inquiry by the carrier or of an actual intent to defraud by the shipper, amount to such a fraud as will discharge the carrier from liability on account of loss or destruction of the goods.

Vendor's Lien—Purchase Money.

The Supreme Court of Indiana held, in the recent case of Upland Land Company vs. Grim et al., that where land was sold and a note taken for the unpaid purchase money, and the seller and purchaser afterward agreed that two notes for smaller amounts should be given instead of the one note, in order that the holder might transfer parts of the debt to different parties, who agreed to take the notes as "purchase money paper," and this was accordingly done, it was proper, in an action by the assignees of the notes to enforce payment, to decree the foreclosure of a vendor's lien upon the land originally sold, and for which the original note was given.

Homestead—Domicile—Attachment.

The Kentucky Court of Appeals held, in the recent case of Levy vs. Rubarts, that where land has never been occupied by a debtor as a homestead, a mere intention to do so at some time in the future gives no right to the homestead exemption; tbat therefore, as the land claimed as a homestead in this case was never occupied as such until after the levy of the attachment, it was error to adjudge it to defendant as a homestead; that under the code provision authorizing attachments against non-residents of the state, it is immaterial where the domicile of the debtor is, as the domicile of a person may be in one state and his actual residence in another, and that as the defendant in the case had, in fact, been a resident of Missouri for two years or more, the attachment was authorized.

Embezzlement a Continuing Offense.

The Supreme Judicial Court of Massachusetts has just rendered a decision, in the case of Commonwealth vs. Parker, to the effect that embezzlement is a continuing offense. The defendant, a railroad conductor, was indicted for embezzlement, it appearing that a ticket sold to a detective in New York was taken by the defendant soon after leaving New York, and had not been returned by him up to the date of his arrest. The court said: "It may be suggested that the doctrine (that a person who committed larceny in another state and brought the stolen goods here could be punished for larceny here) in regard to larceny at common law rests upon a legal fiction, namely, that by taking the stolen property into another state the thief commits a new taking, and that in embezzlement there is no wrongful taking. But we do not see why it may not equally well be said that, so long as a person who embezzles property continues in possession of it, he newly converts it. * * * Since 1878 we have had a statute which seems broad enough to cover the case of a person having embezzled property in his possession without regard to the place where he first embezzled it. As first passed it read: 'A person charged with embezzlement may be complained of or indicted, tried and sentenced in any county in which he had possession of the property alleged to have been embezzled.' This was reënacted in Public Statute, chapter 213, section 20, so as to read: 'The offense of embezzlement may be prosecuted and punished in any county in which the person charged had possession of the property alleged to have been embezzled.' While the language of the two acts differs, the meaning is the same. The statute clearly recognizes the principle that embezzlemeut is a continuing act, so long as the embezzler has possession of the property. If it had been intended to limit the effect of the act to the case of the first act of embezzlement taking place in this state, different language would have been used. We are of opinion, therefore, that he could be indicted here."

Note—Consideration—Debtor.

The Kentucky Court of Appeals held, in the recent case of Flowers' Adm'r vs. Flowers, that in an action upon a promissory note purporting to have been executed in consideration of certain claims assigned to the defendant, a good defense was presented by an answer denying that either of the claims referred to in the writing was sold to defendant, or that any beneficial interest in either was ever transferred to or vested in him, and alleging, further, that the claims were assigned to defendant in order that he might unite them with a claim which he held against the same debtor, and procure an attachment upon the ground that the debtor had not sufficient property to pay the debts, the claim of neither party singly being sufficient for that purpose; and further, that it was understood that plaintiff and defendant should share pro rata in what might be realized from the attachment, but that nothing was realized therefrom by reason of the fact that priority was given to another attachment which exhausted the attached property, and that therefore there was no consideration for the note sued on.

Insurance—Stipulations—Renewal.

In the case of The Mechanics' and Traders' Insurance Company of New Orleans vs. Mutual Real Estate and Building Association, the Supreme Court of Georgia recently held that where a policy of fire insurance contained stipulations or conditions reciting that unless such and such things were true the policy was to be void, and the declaration in the action thereon showed affirmatively that one or more of these things was not true, it was demurrable, but was saved by an amendment alleging in substance that the company's agent by whom the policy was delivered to the insured knew, at and before the time of making the delivery, all the facts to which such stipulations or conditions related, and that consequently the company waived the benefit of the same; that in such a case it was of course incumbent upon the plaintiff to prove the waiver as alleged, and that where a general agent of an insurance company, by a writing duly executed and attached to a policy, continued it in force after the date originally fixed for its expiration, but extended credit to the insured for the payment of the renewal premium and charged himself therewith, the renewal was as binding upon the company as if such premium had been paid to the agent in cash. It appeared that the defendant in the case filed a plea admitting its liability to the plaintiff on the policy sued upon, in an amount stated, in which plea it averred that it had tendered this amount to the plaintiff before the action was brought, and also that "it was, at the time of said tender, and has been always since that time, ready to pay the sum aforesaid, and has said sum now in court to render to the plaintiff," and having supported this plea by introducing evidence showing that, after the loss and before suit, the company, upon a full and thorough investigation, deliberately, explicitly and unconditionally admitted such liability and made such tender, the court held that the jury were warranted in treating such plea and evidence as sufficient proof of the waiver alleged in the amendment to the declaration, and that this being so, and the only remaining question at issue, under the evidence and the law applicable, being what was the value of the insurable interest of the insured in the property, and there being sufficient evidence to sustain the verdict as to amount, and it appearing that no material error was committed at the trial, and also that there had been a previous finding in favor of the plaintiff, who was the assignee of the insured, the court could not undertake to say that the trial judge abused his discretion in refusing to grant a second new trial.

BUSINESS NOTES.

British Economic Association.

Mr. Goschen, as president of the British Economic Association, occupied the chair at a recent dinner of the association, and, in proposing the toast of "The Association," referred to its work during the past year. "He coupled with the toast the names of M. Léon Say and Professor Brentano. M. Say, in responding, described the work that was being done by the French Political Economy Association and the position of economic problems in France, and pointed out that economic science, like other sciences, had a legitimate sphere and function. Professor Brentano also responded, and observed that England, in the past and in the present, was their great master in political economy."

Meat Products.

The Cincinnati *Price Current* says: "An examination of the evidences of distribution of product discloses a favorable comparison for meats, for the four months. On November 1 the stocks in the west of meats and barreled pork represented a total of 153,000,000 pounds; the quantity made was 918,000,000—making a supply of 1,071,000,000 pounds; remaining stock, 405,000,000; indicated disposition 666,000,000 pounds. This compares with 582,000,000 pounds disposed of in 1894–95, and 501,000,000 in 1893–94, for the corresponding period, arrived at by a similar method of calculation. This would indicate that at the low prices the past winter the domestic consumption of meats has been especially large."

Grain Exports from New Orleans.

The March report of grain exports from New Orleans shows an increase, as compared with last year's report for March, from 346,456 to 2,424,242 bushels of corn, and a decrease in wheat from 121,821 to 41,583 bushels. Holland was the principal corn buyer, taking nearly 1,000,000 bushels. England, Germany and Belgium together bought almost as much more, and France and Italy only 200,000 bushels each. Mexico's purchase amounted to 80,000 bushels. Nearly 10,000,000 bushels of corn have been exported from New Orleans this year. Over 2,000,000 bushels, or about 23 per cent. of the whole, were shipped from the St. Louis market, and about 50 per cent. of the balance was exported by St. Louis merchants, though the corn did not pass through that city.

A Bullish View of Iron.

The *Railroad Age* says: "There is one feature of the iron trade that purchasers of supplies of steel do not overlook, and that is that with a moderate demand of mill and furnace products, and with producing capacity idle to 30 per cent., prices remain stationary. Another point is that coke, coal, ore, pig iron and steel billets have kept their naturally high positions since the opening of the year. The accumulating tendency is now under control. Heavy requirements are in sight, but there is a lack of that rushing demand that gives a snap to business. Rail mills are badly in need of business, but it does not come. Coke is above its proper level. Coal combinations are blocking a declining tendency. The entire trade is in a healthy condition, though demand is below the stimulating point."

Sawdust Briquettes.

The *Railway Review* says: "Briquettes made from coal dust are likely to find a rival in localities where wood sawing is largely carried on. Good fuel is now being made from wood sawdust, and there is no reason why sawdust, if well agglomerated, should not make excellent briquettes. They are said to be successfully manufactured in Germany, and in an exceedingly simple manner. When well heated the sawdust becomes sticky, owing to its resinous properties, and then it is compressed into suitable blocks in the usual way. One man with a machine driven by two-horse power can turn out about 9,000 briquettes per day. We should be inclined to doubt the cohesive properties of the sawdust itself. All woods are not alike as regards resin, and in most cases the addition of a small percentage of resin or some other inflammable agglomerant might be advantageous."

Season's Hog Pack.

The *Price Current* says: "When the summer season began, in March, 1895, the prevailing expectation was that the marketable number of hogs for the eight months would be largely reduced. The special investigation instituted by this office resulted in an indication of about 10 per cent. decrease compared with the exceptionally large supply in 1894. This information was well supported by the reported marketings. Under the influence of drouth, apprehensions concerning maladies, and fear of serious decline in values, the movement in many localities was hastened in the latter part of the season, and as a result the records of packing indicated a smaller reduction than otherwise would have been shown. The decrease in western packing was 617,000, or 7 per cent. The total number killed in the west during the eight months was 8,195,000 hogs. This had been equaled previously only in 1894 and 1890."

New York Grain Interests.

The Baltimore *Journal of Commerce*, in arguing that New York is not entitled to its proportion of the grain export trade, says as to differentials and ocean freights: "No exporter outside of New York, no matter how large his business, nor the length of time he has been engaged in it, can tell to-day what the f. o. b. charge at that port is. It is anywhere from a premium for loading the stuff to 1¼c. per bushel. But just where it may happen to be remains always for those who control the elevator facilities to determine, not the merchant who is endeavoring to do business. Under such conditions is it to be wondered at that trade is seeking other outlets, where elevator combines cannot dictate whether you may or may not trade, because in these times it is the fraction of a cent that influences and determines the course of trade, much less 1¼c. So that the cure for many of New York's woes lies with herself, and a recognition of this by the managers of the Produce Exchange will be much more honest and effective than blatant invective against so just and fair an arrangement as Baltimore's differential."

English Views of Wheat.

A subscriber to Beerbohm's *List* (London), "writing upon what he calls the abnormal dullness in the wheat trade, says he believes it is due as much to the disappointing movements of stocks in America as to reduced consumption. He points to the fact that, notwithstanding the early reports of a great falling off in the production of wheat in America this season, the visible supply, as shown by BRADSTREET'S returns, is practically as large as it was in the two previous years, east of the Rocky mountains, and he expresses an opinion that an upward movement, in order to be strong, ought to be initiated in America." To a great extent Beerbohm agrees, "for there is no doubt that the predisposition to weakness in the American markets has been a great obstacle to any improvement. On the other hand, the reports of the rapid reduction in the stocks in Russian ports come partly as a surprise to the trade; to many it may be news to find that the actual stocks are less than they have been for some years past. On December 13 the official returns gave the stocks in the fifteen ports at 3,260,000 quarters; the returns for March 13, just to hand, show that the stock is reduced to about 1,800,000 quarters." The returns do not betoken "abundant supplies from Russia in the near future, whatever the future may have in store. The markets generally, however, will, it is very likely, be almost entirely governed by the weather during the next two months."

The German Population.

After a delay of three months the German Imperial Census Department has given us the exact results of the census taken on December 2 last. The *Chronicle* Berlin correspondent says the total population of the empire, including Alsace and Lorraine, reaches 52,244,503, against 49,428,470 in 1890 and 41,058,792 in 1871. That is to say, the population has increased 27 per cent. since the reëstablishment of the empire twenty-five years ago. The kingdom of Saxony in this period has increased 49½ per cent., Prussia 29 per cent., Hesse 21, Saxe-Coburg and Gotha 24 per cent. Remarkable increases are to be noted in the populations of the two free towns and their dependencies. Hamburg, which in 1871 had a population of 338,974, has now 681,632, and Bremen has risen from 122,402 to 196,278. A remarkable increase is also noticeable in some of the smaller states, where iron and coal industries have been recently developed—for instance, in the two Reuss principalities from 134,126 to 198,923. The increase in Bavaria is 19 per cent. in the twenty-five years, in Würtemberg only 14, and in the Reichsland (Alsace and Lorraine) only 6. In the Prussian provinces the most marked increase of population is to be found in Westphalia, which has now 2,760,250, against 1,775,175 in 1871. The Rhine provinces show an increase of 42 per cent.—from 3,579,347 in 1871 to 5,105,962 in 1895. The extraordinary increase in the population of Berlin and its suburbs is worth noting. In 1871 the Stadtkreis Berlin numbered 826,341 inhabitants; in 1891 it had risen to 1,677,351.
